

MUSEUM OF OSTEOPATHIC MEDICINE, (SM)
800 WEST JEFFERSON, KIRKSVILLE, MO 63501 (660) 626-2359

WILLIAM L. JOHNSTON COLLECTION

Series 6: Collected Research¹

Accession No.:	2006.27.42-6
Volume:	ca. 3 linear feet (3 record storage cartons)
Contents:	<p>Primarily reprints and photocopies of articles by others, with a small amount of correspondence and notes. The bulk of the material was found in a set of hanging files arranged alphabetically in two groups, by author and by subject. This was apparently a general reference file, with materials collected for several reasons: (1) because of WLJ's acquaintance with and/or interest in the author's work; (2) for reference use in his medical practice; (3) as background for his research interests; (4) for possible inclusion in the MSU curriculum or other teaching purposes. Many items had no markings other than highlighting of the term under which they were filed.</p> <p>A large amount of similar material from original Box 37 was added to the Subject subseries as "Specific Projects" and "Other Articles." A separate set of author files found in Box 41 constitute their own subseries at the end (i.e., they were not integrated into the main author files). A partial list of journals from which WLJ took articles is included as an appendix.</p>
Dates:	1945-2002
Processing Notes:	<p>Files labeled "Johnston, Wm." and "Abstracts" and envelope full of reprint requests found with the hanging files were moved to the Publications & Presentations series. The remaining files were weeded for reasons of space. The following types of material were retained: items with substantive markings (margin notes, underlining or highlighting, author inscriptions, attached papers, or other "personalization"); unpublished material, such as letters, papers from a conference, or draft articles; other items of significance that would be difficult for a researcher to obtain, such as articles from very old books or foreign journals. The listing below reflects WLJ's original folder labels; an X in the number column indicates that WLJ collected articles for that author/subject but none were retained.</p>
Access:	Unrestricted
Handling:	In some folders, articles are clipped together with notes or other materials. Researchers must be careful not to remove paper clips or disturb the arrangement of these groups and subgroups. If in doubt, check with the Curator.
Copyright and Permission to Publish:	Most of the materials in this series are reprints or photocopies of published material. It is the responsibility of the researcher to identify and satisfy the appropriate copyright holders.
Suggested Citation:	William L. Johnston Collection, Museum of Osteopathic Medicine, (SM), Kirksville, Missouri [Box #:Folder #]
Related Material:	Similar reference material found separately and in groups throughout the papers was placed in the series with which it was found or to which it most clearly related. See, for example, "Teaching: References and Misc." in the MSU Faculty series.

¹ The term "Collected Research" was used by WLJ's daughters in sorting and packing the materials; it is not known whether WLJ himself referred to the files this way.

Subseries: Authors*(see also Author Files from Original Box 41, below)*
