Post System Foot Adjustment—Great Professional Opportunity

By S. L. Scothorn, D.O., President AOA, Dallas, Texas

After six months of careful investigation the AOA has made a contract with Mr. H. A. Post whereby the man in Montana, his technique—which is osteopathic both in principle and practice—and which is entirely different from anything we have ever done—cannot be taught to be one exact to osteopathic physicians unless the Post System is everything that is claimed for it by investigations made and by clinical experience demonstrated on osteopaths and their patients since Mr. Post has been conducting postgraduate courses under AOA auspices.

It is now up to every member of the AOA to get back of this project. It should be supported to the limit because it means first, a wonderful benefit to humanity; second, enlargement and improvement of osteopathic technique and efficiency; third, opportunity for greatly increased income for the practitioner and a chance to make the AOA financially independent. We must fulfill our contract with Mr. Post—which should be done easily in a short time if the profession gives the right support—and then put the proceeds for postgraduate instruction and territory rights into AOA treasury.

The technique can be adequately explained in words. It must be demonstrated. It is simple and any osteopath can quickly grasp it once the method is explained to him and he sees the work done. A better illustration of Dr. Still's maxim “Find it; fix it; and leave it alone” could not be desired. The efficiency of the system and the extraordinarily quick and gratifying results can best be impressed by quoting letters from some well-known osteopaths who have investigated the work:

From A. C. Willard, D.O.

I have seen and taken the work of Mr. Howard A. Post, Foot Specialist of Oakland, California, and he convinced me after he had treated one patient; convinced me rather against myself. The first patient he treated before me was a prominent lawyer, a man who appears before the Montana Supreme Court more than any other man in Montana. After one treatment, which I could easily comprehend, this gentleman was able to raise himself on his toes, and expressed himself that he had not been able to do that at any time during the past two years, and his feet felt correspondingly good. My doubts have been changed to enthusiasm. This work is thoroughly osteopathic and of a most specific nature. It is just the same work as the “Old Doctor” used to do, but the device makes possible a better application of force than can be accomplished with the hands alone.—A. C. Willard, D.O., Missoula, Montana, March 18, 1922.

From M. E. Clark, D.O.

To the Ohio Osteopathic Physicians: Dear Fellows: Will you kindly give Mr. Post your earnest attention when he gives his foot demonstration? I believe he has something that we all need. The best indication that I myself believe in it, is that I have signed the contract and am taking his course. The patients that he has treated here are very enthusiastic and some have even said that they would go to California to get the treatment if they could not get it here. I was very skeptical at first and osteopathic association have taken your work. You will recall that you saw and treated with me, Thursday afternoon, sixteen cases. I am sure you will be pleased to know that ten of these are taking the treatments at $100 per. There will probably be two or three more of them coming in soon as they have the matter under consideration. As the patients are coming back for their second treatment, most of them are reporting improvement. I feel that you are doing a wonderful service for the osteopathic profession, as these cases have been very difficult, and in most instances, not cured, and you are only doing a wonderful service to suffering humanity in developing a method to relieve this particular ailment.—M. A. English, D.O., Washington, D.C., May 5, 1922.

From C. D. Swope, D.O.

My dear Mr. Post: Undoubtedly you will recall the young lady that you saw on Thursday, who was complaining that her foot felt worse. I saw her today and she was very much gratified at her behavior the other day, as the foot is much better and is coming around in just the fashion that you had told her it would. I am much more enthusiastic about this work since I have been treating entirely on my own responsibility. Unquestionably this system will save an individual bone; so with proper application, must give results. The technic is so simple and direct, that in treating these cases you can so easily demonstrate the osteopathic principle. I cannot see how this can be anything but the greatest help to our practitioners, as it will certainly reduce all foot work to specific magnitude.—C. D. Swope, D.O., Washington, D.C., May 5, 1922.

Dr. W. E. Waldo, of Seattle—who suffered from foot trouble for years—was under consideration. As the patient would take a half or all of the rights for the AOA, and conduct courses, he put up at once his own contract with AOA.

Dr. John H. Bailey of Philadelphia took two treatments at the Atlantic City clinic. He told me afterwards that if my administration as president of AOA did nothing more than introduce this system to the profession it would be famous in history of osteopathy for all time.

Dr. John J. Howard of Brookline, Mass., came to Washington especially to see the work demonstrated. Finding that Mr. Post could not arrange immediately to visit New England and conduct courses, he put up at once his own check for $1,500 to cover rights in his town.

That the financial rewards possible from this work are very high is indicated in letters quoted. I can state some further enlightening information about this. Previous to making contract with AOA Mr. Post had sold rights for Los Angeles and Kansas City to laymen. The man in Kansas City is making $10,000 per annum and has offered $21,000 for Chicago rights. The man in Los Angeles holds his contract rights at $50,000. Dr. Asa Willard and Dr. M. E. Clark bought the rights for Montana. Before they were through treating the patients who came to the clinic while Mr. Post was giving instructions and demonstrations they had paid off the entire amount due on their contract and had besides $825 in the treasury.

AOA Convention, Los Angeles, Week of July 3rd

Dr. Francis A. Curn, Executive Director of the Physceal-Clinical Institute, Inc. of Boston, where ERA is Taught as Authorized and Endorsed by Dr. Abrams.
How Do You Put In So Much Time In the Treating Room?

We have received a great number of letters regarding the article in the April OP, and we are going to try and make this number of letters the best possible. Our staff is heavy; we receive letters from every part of the country; we have received letters from Europe, from Asia, and from South America. We are going to answer as many letters as we possibly can, and we are going to do so in the best possible manner. You will receive an answer to your letter in a timely manner. We are trying our best to respond to your inquiries as quickly as possible.

Social Life of the Doctor

A great many doctors seem to think that they will be much too much for social life in their office or city, in order to have a practice; that their social life will go on much as it has in the past. If they do not have a practice, their social life will not be affected. If they have a practice, their social life will be affected. But I find that the greatest pleasure, outside of my practice, is in becoming established. That is, I am going to handle my practice and commanding respect if he simply tends to business and does not spend time with his patients. It is a great idea in becoming established. That viewpoint may be quite necessary to some, but I have always held that it does not take a large amount of time.

In writing a series of articles of this nature, it is quite necessary to make personal references, and in doing so I will ask your indulgence in order that we may more thoroughly enter into the spirit of this discussion.

Separate Treatment Rooms

I am a great believer in separate treatment rooms. I believe that changing from one room to another rests one, and that one central treatment room, with several adjoining dressing rooms, is the best doctors have. He puts himself and concentrates closely under certain specific centralized conditions.

In going from one room to the other, you can refresh your memory of the lymphatic examination and treatment. You will wash your hands and go into a new room under different surroundings. This has been of great value to me and my work, when we handle so many cases a day. Sometimes, of course, there are two people in one room, and this takes a little more time, but, as a rule, there is room enough for both of us. After all, our patients buy us everything. They supply all of our needs, and we are indebted to them for all we have.

Length of Treatment

We spoke in the last article regarding length of treatment. We thoroughly believe that a great deal of time is wasted in conversation. If you train your patients so that they will be prepared for their treatment as soon as you enter the room, you waste no time; in fact, you have started to treat a patient—yes, almost half treated him—before saying a single word. One of the greatest points in handling a group of patients is to develop a plan for any patient’s troubles that you will be able to remember each of those symptoms the next time you have a treatment. This may not be possible for everyone, but if you will take sufficient interest and be sufficiently observant, and if you will keep your mind so that you can recall, without referring to your chart, almost all of the details; in fact, if you will look up a clinic report before treating a patient.

Lymphatic Examination

We will refer first to examination. After the lymphatic examination, I want to tell you right now that the reason I am able to handle so many cases in a day is because of my lymphatic training and findings. You will see what it is. You will realize when you think of lymphatic examination, and you will see that if you are able to understand the patient’s condition after making a lymphatic examination than you are able to do something for the patient. We do not have a large number of cases, waves, situations, or conditions throughout the body in the majority of cases. We are able to find that certain things, and you may be surprised that you do this finding upon this lymphatic examination. We are able to detect and be able to resolve lymphatic findings more accurately than any other case.

No organic disturbance exists without a corresponding lymphatic involvement, and if you will watch the ebb and flow, so to speak, of the lymph flow in the various areas of the body, you will be surprised in two or three years, after becoming thoroughly familiar with the lymphatic phase of the circulation of the blood, to find that in the body are traced more accurately by observing the lymphatic findings than by any other way.

Unnecessary to Correct All Lesions at One Time

We have stated before that it is quite unnecessary to attempt to make all correction at one time. If we succeed in making one or two specific corrections, that is quite sufficient in the majority of chronic cases. If the patient has a cold, or bronchiolitis, that is quite different, and a little more time must be spent relaxing tissues, sometimes, as well as doing corrective work; but suppose the case is a slipped innominate, also lumbar lesion, a side rotation will secure motion in the lumbar positions and constant. If you look at the face downward, it is quite possible to correct innominate lesions with a single application. A little adjustment of the sacrum which is always necessary and sometimes sufficient without innomin-

Do You Know?

1. Only new matter is printed every month now in "Osteopathic Health." No articles, once printed, are ever used again in its pages, no matter how good they may be (such Brochures as are indispensable may be obtained, if at all, only as "Bunting Lytia Brochures"). Every issue of "OH" now is fully up to the critical journalistic standards of HSB.

2. This layman's Journal will contain in course of the year a lot of sprightly news and topical talks about notable osteopathic affairs such as always interest both patients and public.

3. From time to time it will contain characteristic Bunting editorials on matters of vital osteopathic concern. Also—

4. A wealth of articles especially written for its pages by the best group of thinkers and writers in the profession—ever—article written on order, every article paid for, and every article having passed muster as indispensable may be obtained, as are indispensable may be obtained, if at all, only as "Bunting Lytia Brochures"). Every issue of "OH" now is fully up to the critical journalistic standards of HSB.

5. Many discussions of single diseases. Do you hear it?—many discussions of diseases.

7. Shorter articles and more of them—a wider variety of subjects.

8. Nothing within the covers of "OH" but osteopathy, osteopathic interests. Osteopathy triumphant! No side issue—no falsies—just osteopathy—which is enough to keep one brilliantly edited magazine full of interest.

It's a regular journalistic service to educate your patients, to instruct and inform your former patients more particularly about Osteopathy, and to make new converts for Osteopathy among the numberless host as yet not interested. You can use this new "OH" with pleasure and profit in conducting your practice.

But Do You?

Let us make a survey of your field and its publicity possibilities. Expert knowledge and advice without obligation or cost to you. We've been bringing home the bacon for Osteopaths for twenty years, and we can bring it home for you. Write us this day.

AT LAST! IT'S HERE!

and John V. McManus, D.O.

Spinal Adjustment—A Discussion

VI—Tone

In preparing these articles on the spinal lesion, it will be noted that they are not all our own ideas but that we are trying to bring together good ideas on the subject wherever they are found. So far as we know, no attempt has ever been made to make any comprehensive study of the spine in all its phases.

Sometime ago in reading an article by Denon N. Higbee, M.D., D.O., D.C., we ran across the following statement: "It seems to have been pretty generally overlooked by physiologists and diagnosticians that there is a double relation between the tone of the deep transverse muscles of the spine and muscles of the viscera that receive their innervation from that region of the spine," and again he says, "There is also a relationship of the calibar of the muscles of the deep spinal muscles, (especially longitudinal), and the related organs."

This quotation set us wondering just what physiologists had to say about this so we went to Earn Leloy, Professor of Physiology at the American School of Osteopathy, asking his opinion on the subject. Professor Leloy is one of the foremost teachers of physiology in the United States as well as a thinker along Osteopathic lines as his answer shows.

"There are, Doctor McCole, several reasons why it would be difficult to give a complete answer to your questions."

In the statement you wrote is worded ambigously:

"I think the first part of that quotation does not necessarily mean that the physical tone of the muscles is pretty generally overlooked by physiologists and diagnosticians that there is an almost constant relationship between the tone of the deep transverse and muscles of the viscera when both are innervated from the same spinal segments."

If that is what you mean, we shall have to determine whether the writer means in health or disease. No doubt he means both. The idea comes that what a living thing does in disease is far away, possibly, from what it does in health. So if the relationship exists it must be very wide and loose.

"Muscle tone, by the way, is a matter that is not understood beyond some of its characteristics and its neurogenic origin. No satisfactory difference has been made between muscle contraction and muscle tonus. Of course tonus is a reflex phenomenon, and the opposite of it is used in speaking of the forces which come from the muscles themselves, related tendons and joints, skin surfaces, higher centers (emotions, etc.) as well as viscera. How muscle tonus, as such, should be used, is not entirely clear. It may be determined, I dare say, by the study of some one muscle in some one man under various conditions of environment."

"In disease, however, there seems to be according to the Osteopath a relationship between visceral conditions and the state of the muscles, especially longitudinal, and the conditions of the internal organs related to those muscles through spinal segments."

"Here again is something Osteopathic. An M.D. usually finds and describes the physical tone of the muscles. The texts are made by Medics. So it is no wonder the books are weak on these subjects."

"That a reflex condition in a muscle may be caused by the release of some stress which has been known for a long time to physiologists but why should they use up space in their books talking about such things when they do not help but may use for it."
students—and there you are. There are a thousand and one things in a human body that need investigation just as much as does muscle tone, contracture or caliber and most of the investigators are working under the direction of medicine men. But the osteopathic man is interested in getting the first attention.

"For my own mind, I take it that 'contractured muscle' and 'caliber of fasciculi' and it may be a few words—it is a thin wind to the same thing. It would not surprise me to learn that this thing is not muscle tone or even an exaggerated muscle tone, but something more akin to the same thing—something that replaced muscle tone in part at least after the muscle cell had been subject to abnormal stimuli for a long time."

"In other words, it is the very beginning of a pathologic state in the muscle. This is necessarily vague because I admit I do not know that I am the condition. In the home fluid (graph). We see there of tonus in glands. If sex action obtains in muscle cells—it does not take much imagination to make an abnormal nerve impulse (such as make for tonus, whatever it is that looks to an accumulation of intercellular liquid and thus increase the caliber of the fasciculi in muscles.

"You see that it is possible that I cannot help you greatly as regards strictly scientific data. However, most dope is only half scientific anyway, so I might add to what I said. The metabolism proceeds in that cell; so it is that it cannot be measured. But when the nerve is cut the tone is lost—so there must be metabolism and blood flow in the area. There are some molecules out of the large molecules within the muscle cell. The small molecules serve to increase osmotic pressure and something roared that going into the cell. In health such goes on in day time and less at night when tone is lowered. In a 'contractured muscle' such goes on all the time, day and night. Does it? I don't know how a muscle lesion feels at night when the owner is asleep as compared with the day time. In fact we need some information in glancing at that muscle.

"If I have not answered any of your questions to your satisfaction, it is because I can't. If you have any real evidence of an abnormal finding, I'm good on easy stuff. However, if I were you I would not let an unanswered question spoil a good article. I shall be looking for 'The Muscle Tone' and read it when it's out.'"

"The process is not as yet possible, however, to change the situation which obtained when Osteopathy was born. The clinical results were far in advance of laboratory findings and even theoretical formulas.

"The apparatus required for diagnosis by the Abrams electronic method is simple and consists essentially of three things—a dynamizer, for receiving energy thrown off from blood or tissue specimens; a special roentgen, for measuring this energy; and a normal human nervous system, through which the energy may be conveyed and in which certain definite and easily demonstrable reactions are produced under proper conditions. And these reactions are absolutely for the same and if I were to drop from a cancerous patient will give exactly the same reaction. And this state of affairs applies to all the infections and malignancies. It is not as yet possible, however, to eliminate the human element, and occasional errors must inevitably occur. But I think we can say without any hesitation whatever that the system of the Electric Reactions of Abrams is by far the most accurate method known to Science today for diagnosing diseased conditions in the human body, and a theoretical 100 percent of accuracy may at least be conceived.

THE OSTEOPATHIC PHYSICIAN

Osteopathy and the Abrams Electronic Concept

Francis A. Cave, D.O., Boston, Mass.

The essence of my last contribution regarding the Abrams concept, in the April OP, covered the proposition that irritation or tissue throws off energy at a definite measurable rate and that when such organ or tissue becomes diseased its rate of energy production naturally changes, and the change itself can be measured mathematically by the same methods as used with the normal tissues.

Accepting this proposition as a demonstrable fact, it would naturally follow that an organ or tissue which was functioning improperly—because of interference with its nerve or blood supply, caused by an osteopathic lesion—would have a different vibratory rate after the lesion was corrected and normal conditions re-established. It is now possible, through the Abrams methods of electronic measurement, to ascertain mathematically the efficiency of the osteopathic procedure of adjustment; and not only the efficiency of Osteopathy, but also the efficiency of every other therapeutic method or system which may be injected into medical thought and one which operates on the same fundamental principle.

The Abrams concept, in the April OP, has said in substance that 'contraction' and 'caliber of fasciculi' and it is now possible, through the Abrams electronic method, to ascertain mathematically the efficiency of the osteopathic procedure of adjustment; and not only the efficiency of Osteopathy, but also the efficiency of every other therapeutic method or system which may be injected into medical thought and one which operates on the same fundamental principle.

"If I have not answered any of your questions to your satisfaction, it is because I can't. If you have any real evidence of an abnormal finding, I'm good on easy stuff. However, if I were you I would not let an unanswered question spoil a good article. I shall be looking for 'The Muscle Tone' and read it when it's out.'"

"The process is not as yet possible, however, to change the situation which obtained when Osteopathy was born. The clinical results were far in advance of laboratory findings and even theoretical formulas.

"The apparatus required for diagnosis by the Abrams electronic method is simple and consists essentially of three things—a dynamizer, for receiving energy thrown off from blood or tissue specimens; a special roentgen, for measuring this energy; and a normal human nervous system, through which the energy may be conveyed and in which certain definite and easily demonstrable reactions are produced under proper conditions. And these reactions are absolutely for the same and if I were to drop from a cancerous patient will give exactly the same reaction. And this state of affairs applies to all the infections and malignancies. It is not as yet possible, however, to eliminate the human element, and occasional errors must inevitably occur. But I think we can say without any hesitation whatever that the system of the Electric Reactions of Abrams is by far the most accurate method known to Science today for diagnosing diseased conditions in the human body, and a theoretical 100 percent of accuracy may at least be conceived.

Direct-to-the-Home Publicity Wins Better Results Than Any Other Form of Advertising

That is what you obtain by using "Osteopathic Health"—direct-by-mail contact with the better class of homes in your community. Direct-to-the-Home Publicity hits the bull's-eye with a thousand times more sureness and appeal than general publicity. It's in the nature of things that it should be so, and no one denies this fact who understands the nature of advertising and the laws by which its forces work.

Bring your problem to us for solution whether it be the want of more patients, the need of higher fees, better collections of the money due you, the help of an osteopathic assistant or need of a competent trained office girl. Whatever your office need may be, it is intricately tied up to the need of vigorous and systematic direct-to-the-home campaigning with "Osteopathic Health," "Harvest Leaflets," and "Laity Brochures" which afford sure and easy victory for you.

It costs nothing to get an advertising survey of your field, based on expert knowledge of conditions and the ways to win what you want in exchange for your own efforts. We'll help you make more money if you give us a piece of the increase. That's fair enough—isn't it?

THE BUNTING PUBLICITY SERVICE

for
OSTEOPATHS

Waukegan, Illinois

[To Be Continued]
When the vibratory rate of any diseased condition is established and the mathematical formula has been made out, the extension of this same philosophy requires the application of destructive vibratory rates which will sterilize the infection or draw the fangs of malignant conditions. Such things can be demonstrated in the laboratory experimentally, but the best of all proof is the fact that patients with such conditions, and having treatment according to the philosophy of Abrams, are getting well by the hundreds and recovering from conditions otherwise hopeless and involving terrible suffering.

Here, in truth, is a case where “the proof of the pudding is in the eating.” And while any physician of any school might make the electronic diagnosis and apply the electronic treatment to sterilize some focal infection, for instance, I maintain that humanity would not be established in such infected tissues without the correction of the osteopathic lesions affecting their nerve and blood supply. Furthermore, every patient undergoing treatment by the electronic methods of Abrams is given concession at various levels of the spinal column—a procedure which furnishes a natural link between the philosophies of A. T. Still and of Albert Abrams. Osteopathic physicians will easily excel in the application of these methods and will find a new world of service to humanity awaiting them with the gates wide open. Not every member of the osteopathic profession will take up this work in full; but the day will come when the osteopathic physician who has not equipped himself to utilize these methods at least in part will find himself on the shelf with the cobwebs.

Therapeutic Light as an Adjunct

I use a 1,000 watt, 500 candle power light in the office and take a 200 watt light with me on outside calls. You will be surprised to find how the soreness goes from the part of the body that you apply the light to and there is no skin so sensitive that you cannot use it. I like it very much with children with colds or throat trouble as I can use it when they won’t allow me to treat them.—E. R. Wilson, D.O., Chariton, Iowa.

Dr. Abrams Accepts Place on AOA Program, Los Angeles!

In response to invitation from President Scotthorn by wire Dr. Albert Abrams of San Francisco has definitely accepted a place on the AOA program of the National Convention at Los Angeles. He will talk about his investigations in ERA. Not only will Dr. Abrams appear on the program but he has given Osteopathy full recognition as physicians to take his work and use his oscillometers. Dr. Scotchorn says great credit should be given to Dr. Jenette H. Bolles, D.O., for his unceasing efforts to persuade Dr. Abrams to put Osteopathy on full parity with physicians of other schools in studying and practising Abrams’ system of radio-active diagnosis and therapy.

THE OSTEOPATHIC PHYSICIAN

Dr. Abrams' Electrifying Diagnosis and Treatment

Has the therapeutic millennium arrived? One might be prompted to think that something extraordinary is now a fact. In fact, one might read the enthusiastic accounts of Dr. Albert Abrams' Electronic Diagnosis and Treatment reported in the last few numbers of *The O.P.*

This goes to show that there is nothing new and breath-taking method of diagnosing and treating disease will be a godsend to suffering humanity—just think. In *The O.P.* reports consider also what an unalloyed blessing it will be to us who earn our living by ministering to the ills of the suffering public. The two greatest problems which confront any osteopathic practitioner, matter how experienced or inexperienced, will be solved. The same two causes of the most frequent mistakes in practice: diagnosis and treatment, will be obviated.

No longer will we have to puzzle over whether our patient's torticollis is due to an infected sphenoidal sinus or to the little one who "rolls her own" whom he placed on Main Street while going to lunch. Will we question whether the condition which we are treating is due to a fibrous spirocyte pudding in the Canal of Schlemm or by a hard boiled gang of gonococci lurking behind the periphery of the broad ligament? Not at all. We simply get a drop of blood on a piece of filter paper and place it in the ophthalmometer, turn the switch, percuss the abdomen and presto—we know what the pathology is and marvel to relate, so where it is, Honest, even without seeing the patient. If we have not an ophthalmometer we can send the blood to Dr. Abrams and the diagnosis is made by mail, so to speak, something which even the chiropractors do not claim to do. And the treatment? Simple. Just turn the switch on the Oscillogram to the oscillogram indicated for that disease and shake the everlastin' daylight out of the disease.

Stop momentarily in your toil, brother practitioners, and consider what unheard of opportunities for ease and leisure this new method opens up to us. With an oscillogram chart on the wall and a well trained office girl what is there to prevent us from indulging our avocations to our hearts' desire? And with a fool-proof "diagnostic machine" a reality, we could go still further and spend our winters in balmy Florida or in the land of golden sunshine beyond the Sierras. With diagnosis certain and as practically positive in the majority of diseases would we have to worry that patients would not struggle to crowd into our offices? Try it and see. We should take immediate advantage of our opportunity to impress these facts upon prospective students of Osteopathy. When they learn what can be accomplished with this revolutionlary method, for the patient, to be sure, but for themselves primarily, there will be created such a yearning for osteopathic training that the schools will be swamped with applicants. Try the Ponzi method. Show the prospects how easy it will be to make money after they enter practice and our present essay contests and others student recruiting methods will be automatically rendered archaic.

If we seriously consider the money making possibilities presented to us by the genius of Dr. Abrams the prospect almost overwhelms us. With a battery of ommeters and oscillograms and a corps of trained assistants we could make even Dr. Millard's eighty-six thrusts a day seem like child's play. And at the rate of these or four dollars an oscillogram—Hot dog! Who wouldn't give up his or her practice for a month to learn such a business? And probably the Pelikan's for those who give these courses might not be so very hard, either.

The profession certainly owes Dr. McManis a tremendous debt of gratitude for his sacrifice and untiring efforts in correcting the defect in Dr. Abrams' vision. It was another triumph for Osteopathy and was accomplished without the use of glass and or displacing the eye. Perhaps it is not generally known that Dr. Abrams suffered from a peculiar form of color blindness. When Dr. McManis first became interested in the electronic method for Osteopathy Dr. Abrams was unable to distinguish the color of the long green when held by an Osteopath. However, after several weeks of Dr. McManis' gradual but skilful adjustments he was unable to tell any difference in its hue whether in the hands of an Osteopath or medical man. Who can term what the same treatment was responsible for the good doctor's apparently "revelation" that there may be a glimmer of scientifical truth in Osteopathy, and that all Osteopaths are not necessarily unequaled cokcords.

There is no doubt that the sciences of chemistry and physics have made greater advances in the past ten years than ever before and there may be something, or a great deal, in Dr. Abrams' Electronic Diagnosis and Treatment. If it is as good as proclaimed it will not take long for his name and method to be known, wherever there is sickness. If he really has disease by the tail we will all know it without

Taking ERA at Bradford, Pa.

I am at present in Bradford, Pa., taking the Electronic Reactions of Abrams under Dr. J. W. King and am fully impressed of its great worth in diagnosis and treatment. The methods are revolutionary and to one not fully grounded in them, inconceivable, but nevertheless almost infallible, afterward.—R. L. Starkweather, D.O., Goshen, Ind.

The June Issue of

Pearson’s Magazine

A Fearless Independent Monthly
Contains a twelve page article on this subject

By Upson Sinclair.

Subsequent issues will carry additional data on this most vital of all discoveries beside a special 32 page Abrams supplement.

You cannot afford to miss reading these issues!

News stand distribution is limited to advance orders. To insure your copy send us one dollar for a special six months’ subscription to PEARSON’S Single copies 25c.

ERICA in Every Case Sustained or Augmented Clinical and Laboratory Findings

For a number of years we have been acquainted with the work of Dr. Albert Abrams of San Francisco. Eighteen months ago a dear friend and colleague, William Wolfram, M.D., of Cincinnati, instituted a practical test of Dr. Abrams' methods. For over a year he sent specimens of blood, with very little or no data, and found in every case that his clinical diagnosis was confirmed, and often unsuspected pathology was diagnosed which on further investigation by the ordinary methods proved to be correct. We were informed of the progress of these tests, Dr. Wolfram then journeyed to 'Frisco and took Abrams' course, and on his return we immediately negotiated for the installation of the ERA in our department of diagnosis. We have incorporated this method in our examination, the tests being made independently of routine diagnostic procedure. The reactions have in every case sustained or augmented our clinical and laboratory findings. The element of psychology or chance we have eliminated by repeated examinations of the same blood specimen, with consistent results, in over 500 tests. A study of the later works of Abrams will show them to be entirely in accord with the basic principles of Osteopathy. Most certainly Abrams has opened the way to a true science of diagnosis and treatment which should be heralded and acclaimed by the osteopathic world. This letter is prompted by an unwarranted criticism which I found in your last issue of OP. I find no record of the criticism having studied under Dr. Abrams, or having been associated with a known practitioner of the ERA. It is distressing to find so uncritical and puerile-like a condemnation offered by a man of the standing and professional reputation of Dr. X. It is my personal opinion that Dr. J. V. McManis is to be highly commended for his efforts to make this new field available to the Osteopaths. May I extend a cordial invitation to any of the profession who desire to investigate the reactions of Abrams to visit our laboratory and apply whatever tests they deem necessary to satisfy themselves as to the value of this new science.

We Did, Doctor, Right Along

I hope you will give us, from time to time, some of the "Dr. Abrams Dope." I have been studying his methods for some years. For some ailments it is the wonderful remedy. J. B. Balby, D.O., Tacoma, Wash.

Spondylotherapy Not Imitation Osteopathy

Hurrah for the Osteopathic Profession! Hurrah for Abrams! I am gratified to see that the two have come together. I had the pleasure and the profit of taking the course with Dr. Abrams some ten years ago, before Osteopaths were burned out of his course. Since that time I have written more or less of Abrams and his work for the Osteopathic Physician but it was a rather cold reception from general practitioners. I was convinced at that time that Abrams is scientific and I have had no reason to change my mind. Though I have been using some of his methods and I found them good. I found that there is a disposition among Osteopaths to slur his methods, especially spondylotherapy, as a cheap imitation of Osteopathy. Please allow me to repeat and emphasize, that having studied under Abrams, his reactions in diagnosis and his reflex therapy were developed by him individually, and they are different than anything we had gotten through osteopathic channels. To be sure, these are right in line with Osteopathy and should have been incorporated in osteopathic teaching as soon as they were proved. They were introduction classes that I taught. We trust now that there are enough voices being raised to make these by due recognition. "Prove all things, hold fast that which is good"—Arthur Still Cruz, D.O., Kansas City, Mo.

The Case of Capt. F. B. Fishburne

After reading in The OP the article by Dr. McManis concerning the case of a friend that has had such wonderful results from taking the Abrams treatments, I was quite interested in that article and so glad you published it. I am an Osteopath first, last and always, and if we can add to what we already have, why I say get all we can and then do all we can for others. I am gratified to see that the case of Capt. F. B. Fishburne is very interesting and I am sure you would like to have it. I have known him for years and he is a conductor on a passenger train coming through our town every few days. He gave me this and I am going to copy it just as he has given it to me. If you should publish this it is all right with him for he is so enthusiastic over the good he has received he wants to do all he can to help others. Joanna Barnes, D.O., Ridge Spring, S. C.

Captain F. B. Fishburne's Case: During the summer of 1917 had some pain on tongue. Went to many doctors here and in Baltimore. General opinion was 'twas hectic condition although Wassermann always negative. Had many doses of 0.66 to help fight off a slight improvement after some of injections. Finally developed small double tumor on left side of tongue near front. He went to Dr. Schaumburg, N. Y., and had tumors removed. Had radiun immediately thereafter and was told that the first it was used in cancer cases in this early stage "we get 100% cures." This was at the Radium Institute, 70th Street, West. Later had quite a number of applications from doctors on McManis' case. First operation was performed August 30th, 1918. Early in 1919 had enlarged glands on right side of neck and had another operation for removal. In August 1919 noticed a small tumor on tongue midway back. Consulted Dr. Barnum at Kelly's in Baltimore and was told no cure for cancer. Between then and January saw same man twice with same results. However, other M.D.'s at Kelly's including Dr. Kelly himself was of opinion should operate and Dr. Barnum so decided.

Dr. M. B. Bailey, Intern

Dr. G. Y. Warner, Intern

Dr. W. J. Hoehn, Intern

Our hospital has enjoyed a very prosperous, satisfactory second year, with about 40 percent increase of patronage over the previous year. Dr. Hardy has proven to be very capable in the Ear, Nose, Throat Department. His work is high class and conservative. No effort is made to do things in a spectacular way. Dr. Earl Laughlin and Dr. Bigsby have both proved very valuable in their departments also.

For further information address Dr. George M. Laughlin, Kirksville, Mo.

The merit of the McManis tables is measured, in a degree, by their popularity.

One hundred and twenty-five upper classmen of the American School of Osteopathy have taken our course in "McManis Table Technique" during the past two months. They like our tables! Why? Because the technique is easier and joint motion normalized quicker.

Then again, in our active practice, we find that patients greatly prefer the "McManis Way."

And last, we have over 2,000 satisfied users of McManis Tables in the Field! WHY? (You answer).

The Osteopathic Physician

Dr. Cave Demonstrates ERA to
Editor "Pearson's Magazine"

Well, the great work has been accomplished
and the osteopathic profession is now accorded
the same rights and privileges as M.D.'s in
the matter of leasing Oscilloclasts and the
Electronic Reactions of Abrams. Much credit ac-
crues in all fairness to The OP for the very
splendid assistance given to this movement
in the way of publicity to the profession.
The large amount of space given in your columns
has been toyfully and cheerfully given for the
benefit of the entire profession and your re-
ward will come in due time. Please accept
my most grateful appreciation for your splen-
did campaign.

My demonstration in the ERA to the editor
of Pearson's Magazine during the month of
April was a complete success and I was greatly
pleased to witness the editor himself making
the most accurate diagnoses under my guidance,
which merely proves that the Abrams concept
is basically so simple that even a layman can
comprehend and develop it. As a result of
this demonstration, "Pearson's Magazine" will
give much space in the June issue to an article
on the ERA by Upton Sinclair, to be followed
by similar articles later on. Pearson's for June
should be given the widest possible circulation,
for the benefit of public and profession alike.

Under date of April 10th, Dr. Abrams wrote me:-"I am glad your demonstration was a
success. I have finally decided to lease oscil-
loclasts to those who have taken the course and
for whose ethical standing you will vouch." This
letter was confirmed by wire to President
Scorthorn during the Atlantic City Convention
just splendid news also that Dr. Abrams has
accepted a place on the Los Angeles program
of the AOA and I predict a capacity audience
when his turn on the program comes to time.
The way is now open for Osteopathic Phy-
sicians to restore health and happiness to tho-
sands of cases of malignant and infectious dis-
case without the intervention of surgery, and
to make themselves more than ever before a
supreme necessity in their respective commu-
nities.-Francis A. Cavey M.D., D.O., Boston,
Mass.

Seek Truth with Open Mind

Inclosed find check for $2.00 for which please
enter my subscription to the Clinical Quarterly
of Abrams. I have been very much interested
in the discussion of the Electronic Methods of
Diagnosis and Treatment. You deserve great
credit for helping to bring these methods before
our Profession. Should they prove to be one-
half what they claim for them, it would offer
a great advance in therapeutic methods, and
would dovetail into our practice nicely.-Frank
H. Smith, D.O., Indianapolis, Ind.

Abrams' Work Fits in with Osteopathy

Through the article in OP written by Dr.
McMains I became enthused over theElectronic
Reactions of Abrams; had a diagnosis of my-
selves and am pleased with the results. Have
booked up for the course this summer with Dr.
King of Bradford, being only 20 miles from
here. He is a real fellow and has shown me
every courtesy possible and is very capable in
the work. I am very sure Abrams' work will
fit right in with Osteopathy.-J. H. Henderson,
D.O., Glenn, N. Y.

The Oscillatory-Gravity Treatment

The only application of gravity
now used in therapeutics,
which does not produce
intracranial pressure

Brilliant results in all Chronic
Inflammations, Abdominal pain,
Thyroid Disorders, Neurasthenia, High
and Low Blood Pressures, Cardiac
Neuroses and during Gestation and
the Menopause.

The Gravitiser is widely known and recommended by leading New York physicians and ap-
plies in all cases, irrespective of high or low blood pressure or cerebral plethora, up to the incapaci-
ty of the patient.

"Fluid Pressures of the Brain and Cord" is now in the mails. Free to all members of the AOA.

AOA Signs Lease for Chicago Office—Will Occupy in June

The AOA has signed a lease for business and editorial quarters in the Studebaker Building, Chicago, on Washburn Avenue, right behind the Blackstone Hotel, and will occupy the premises about June 15th.

Dr. S. L. Scrothorn, president of the AOA, made a trip to Chicago the second week in May for the purpose of selecting offices for the AOA and, after careful investigation, found desirable space available in the Studebaker Building; he decided the location was well situated for AOA purposes; and concluded a very favorable lease, effective June 1st. The offices cover 1,200 feet of space on the 6th floor. They are well supplied with daylight, there being two extremely large south front windows. Dr. Scrothorn feels that the new premises will enable the AOA to take on greater responsibilities and do more efficient work for the profession.

Mr. R. H. McClure, Business Manager, is already making arrangements for the move to Chicago. He expects to be in the new quarters by June 15th. He told Dr. Scrothorn that new contracts, now made for AOA printing in Chicago will save the association a lot of money.

Dr. Scrothorn is to be congratulated on having at last made consolidation of AOA business and editorial offices in Chicago an actuality. It should lead to better functioning of all the departments of AOA activity.

Dr. W. F. Wurth of Kenton, Ohio Furnishes the Winning Evidence for Arbuckle

The above was the headline of a generous type in the Kenton, Ohio, Osteopathic Enterprise, April 13th. If Arbuckle is free today he has Osteopathy to thank for it, it seems. Thrice he tried on a charge of manslaughter. Twice the jury disagreed. The third time he was acquitted within six minutes after the jury began its deliberation. Why? Because his attorney, Garvin McNab, put the valuable information and suggestions he received from an Osteopath, Dr. W. F. Wurth of the little town of Kenton, Ohio, to good use. Dr. Wurth claimed that the Virginia Rape case was entirely similar to a case he had in Kenton and Arbuckle's Attorney using the information supplied as a foundation, built upon the long campaign's favor which resulted in a verdict of not guilty.

Osteopath Wins Appeal from $5,000 Verdict

Justice Schaffer of the State Supreme Court ordered a new trial in the suit against Dr. Dudley B. Turner of Philadelphia, Osteopathic Physician, by one James S. Stemons, who was injured, at $5,000 damages by a jury in common pleas court No. 2 for a severe burn received from an X-ray machine. Justice Schaffer ruled that not a "high degree" of care but only such a "reasonable skill and diligence" is required of physicians and surgeons as is ordinarily exercised in their profession; that "there was nothing in the evidence to show that the machine was used in any way different from those ordinarily used or that the defendant through lack of training or otherwise was incompetent to handle it."

The Chicago College of Osteopathy

5200-5250 Ellis Avenue, Chicago

The Summer Quarter begins June 19, 1922

The Winter Quarter begins January 2, 1923

The Autumn Quarter begins September 21, 1922

The Spring Quarter begins March 23, 1923

Each quarter is twelve weeks in length.

Students are admitted at the opening of any quarter, but no student is admitted after the first week of a quarter.

The special Post Graduate course will begin Monday, September 11, 1922, and continue for two weeks, closing Saturday, September 23rd. Tuition for this special Post Graduate course is $600.00. An especially attractive course is offered this year. All graduates of recognized osteopathic colleges are cordially invited to avail themselves of this opportunity.

This College is registered with the New York State Board of Regents. This means that it maintains the high standard required by that Board. It also means that graduates of this College are admitted to the examination for license to practice in New York State and all other states which maintain the New York standard.

Students who wish to be qualified to practice in New York State should be careful to select a College which is registered with the New York Board of Regents.

The training school for nurses is offered to many candidates. The training school course is two years in length. At least one year high school work, or its equivalent, is required for admission. Tuition is free and after the probationary period of three months, students are paid ten dollars a month during the first six months of the second year. The student nurses serve board, room and laundry free, and two weeks' vacation each year.

NECESSARY IN DIVERTICULITIS

A specialist of international reputation, after defining Diverticulitis as the formation of small pouches along the walls of the colon due to prolonged constipated conditions, points out that these pouches, becoming filled with fecal matter, quickly cause inflammation which leads to ulcers of the bowel, abscesses or adhesions—even the growth of tumor masses and obstructions. A very serious condition, which, he says, is to be remedied only by careful non-constipating diet and the administration of liquid petrolatum.

NUJOL is the ideal liquid petrolatum for the correction of intestinal disorders. Its purity, quality, and general suitability to conditions of intestinal stasis is attested by leaders in the medical profession.

In determining a viscosity best adapted to general requirements, the makers of Nujol tried consistencies ranging from a water-like fluid to a jelly. The viscosity of Nujol was fixed upon after exhaustive clinical test and research and is in accord with the highest medical opinion.

Sample and authoritative literature dealing with the general and special uses of Nujol will be sent gratis. See coupon below.

CHIROPRACTOR

C. C. Reid, D.O., Denver, Colo.

I note in our own magazines and in my correspondence that various physicians over the country refer to chiropractors and their relation to osteopathy and osteopathic physicians. Many times we become hard in our thoughts. Our judgment is ruled by prejudice. Of course, under a stronger prejudice our judgment is not capable of judging correctly.

Chiropractors are persons of flesh and blood similar to osteopathic physicians. They have ambitions, desires, feelings, preferences, prejudices, economical conditions to meet, like all the rest of us. They have colleges with many more students as do the osteopathic colleges. The students are enthusiastic, energetically working for their ideals and their estimates of life, morals, ethics, human relations and religion. In our judgment we should take into consideration all these things and there would be less time, energy, words and breath wasted. After all it is a question of educational standards.

The recognized chiropractic colleges among the chiropractors require three courses of six months each. This can be put in a year and a half straight work or all in separate years, all in one year. They stress the mechanical law pertaining to health and disease, and in their efforts try to make it this mechanical law. Many things are mechanical law, which must be obeyed in the dieticet and hygienic world, even though the mechanical law be perfected so far as bodily alignment is concerned.

They also forget the psychic law and do not seem to realize in their teaching that there are many psychic classes of disease and the psychic law must be obeyed even though the mechanical law is comparatively compiled with.

I am not saying that they do not know that these laws exist, but they are radical and one-sided in their stressing of the mechanical law to the neglect of the psychic and chemical law.

The osteopathic school also stresses the mechanical law but does not forget to teach also the chemical and hygienic applications. The application of the psychic law is also taught in the osteopathic colleges with a view to understanding how to treat and diagnose diseases by suggestion, spiritual and otherwise according as the psychic law is transgressed.

With this broad combination, Osteopathy has naturally developed into much higher standards, greater preliminary requirements and longer courses of study in order to meet its conception of what a physician ought to be. Every Osteopath should be open minded, ready and willing to accept suggestions and back up good things from any source.

The chiropractors are thinking. They are becoming a discounter! Criticize? Yes, we wish you to criticize. We are saying, no doubt they will probably work out some points in their therapeutics or variations in the application of some methods which might be useful to any physician. If anything happens to come through by way of literature, demonstrations, or otherwise, that should prove useful to you we are willing to pass it on.

If we should be the cause of helping a man to an honest and scientific truthfulness, the point should be accepted for what it is worth and used for the benefit of humanity.

STILL VERSUS PALMER

J. D. Howell, D.O., Orlando, Fla.

At the present time there is a great but more or less silent controversy going on in the United States between two opposing forces, those who represent the principles of Andrew Taylor Still and those who represent the principles (sic) of B. J. Palmer.

I was about to say it was my pleasure to know Dr. Still, but well; who am forced to say that it was my pleasure to know Dr. Still and I also know B. J. Palmer. One was quiet, democratic, a man of the people, who made his profession better than he did filthy lucre. The other is self-assertive, pushing, commercial and more in love, applying self-aggrandizement than the public good. No Osteopathy will hesitate for a minute in deciding which of the above characters represents Dr. Still. And yet, because Dr. Still was that kind of a man who didn't push his discovery to the front and commercialize it like the other man did, his discoveries are being boldly appropriated by this blatant imitator, and credit and honor that should go to Dr. Still and his followers are being absorbed by those who are absolutely unenlightened and undeserving of such credit.

I, for one, believe, and shall always believe that truth needs her champion and that we should have shown up the clinics for what they are right from the beginning. I remember, at an A.O.A. convention in Philadelphia a few years ago, the question was taken up and some of the leaders in the profession decided it was better to ignore them and thus the matter was dropped. I do not take it at all the State Osteopathic Convention in Jacksonville, the question of clinics was brought up and resolutions were passed that we kill them in their cradle and destroy the whole. The Tennessee Osteopathic Convention in the own town when two appeared I took up the cudgels in the newspapers and spent many dollars fighting the cause of Osteopathy until no doubt was left in the minds of the public as to what Osteopathy and chiropractic was, with the result that the two clinics here, like the classic Arabs, "folded their tents and quietly slipped away," despite the fact that other Osteopaths in the town lifted not a voice and son in the fight.

The editor of the Christian Register in a recent editorial puts what I wish to say regarding this matter in very concrete language: "We believe, "we are not going to appeal to the public. We shall fight this matter with right on its side will win, or the imitators with their organizations and publicity will win. Osteopathy is a cause until a man appears. We shall fight this matter with right on its side will win, or the imitators with their organizations and publicity will win. Osteopathy is a cause until a man appears."

DO YOU LIKE THEIR STUFF?

By some peculiarity of our human make-up we too often take the good things that come our way for granted. Thus many a service is undervalued, many a well written article is passed over without a word. On the other hand, if some little thing in an article or service does please us and we are up and doing, vault our complaints and registering our kicks.

Don't always be a discounter! Criticize? Yes, criticize them. But always analyze and pull down, but piece by piece and build up sometimes, too. Give credit where it is due, no matter how small. But don't forget to throw an occasional flower too! If deserved, make it a bouquet even!
The fundamental principles of Osteopathy are as old as the human race and its roots sink deep into its consciousness. Some patients I have known.

Admit Evans on His Record "Scothie!"

Some Patients I Have Known
VIII
Eager for an Operation

John Barr, D.O.

A great many patients come to the osteopathic office solely because they hope to avoid an operation by so doing. Happily, this result is often obtained. Occasionally comes one who has not quite made up her mind on this point.

Some doctors have told her she ought to have an operation. Chances are, he told her so to get rid of her. However, she prefers to have one, she might be sure of herself for she knows from hearsay that they never advise one unless it is imperatively indicated.

Yes, the treatments seem to help and yet they do not just get at the trouble. You go over her carefully again, trying to tie down the elusive pain. You are not quite ready to classify her as neurotic and you would like to save the poor woman from an operation for she has already told you that she fears she will have to come to one some day.

Vainly you seek a physical basis for the trouble. The pelvis is clean, the abdomen is negative, the mind, you are beginning to suspect, is slightly clouded.

Still your patient continues under your care. She has by this time secretly determined that she will never be a well woman until she has had an operation and furthermore she is equally determined to have your approval of the decision.

Finally, in desperation, you advise her to have a complete gastrointestinal X-Ray examination. Such an examination, you feel, may either produce some hidden condition or it may effectively prove to her that there is really nothing on which to operate. The patient consents, never batting an eye at the expense. She is just as anxious as you to exhaust every means of diagnosis. She has already decided that it will make a much better story to tell at the next afternoon tea if she can include all these preliminary details.

You miss her with a great sense of relief for the week during which she is under observation. Then she and the Roentgenologist's report arrive together. She is all worked up to know the fatal news. Bowed down from her two pages of detailed findings, it says that this patient has a moderate degree of psoas and consideration.

You assure her that there is absolutely nothing which indicates an operation and at last she gives you up as hopeless. By now she knows she has just got to have that operation with or without your consent.

Out she goes and that is the end of her, as far as you are concerned. Two months later, one of your faithful chronicles comes in and regales you with the tale of the wonderful operation that Dr. So and So performed on your erstwhile patient. What did he do? Oh, took out her appendix and separated some adhesions.

Wearily you shake your head and privately wonder why God ever made some women—and some doctors.

LIVING

To spread a little living in a new and better way, by the pushing, shoving or manipulating of the little bones of the spine back into proper alignment with their fellows, the mechanical adjustment of what is structurally wrong with the patient, and thereby curing his illness, may seem odd to some, but there are millions who have tried it and found that it works just like a charm. Osteopathy as a profession is most honored where it is best known; it stands a more intimate acquaintance.

Admit Evans, D.O., Miami, Florida.
Osteopaths Advertise, Showing Change from Old Time Beliefs

By John H. Sines in Trenton (N. J.) Evening Times

One by one the old ideas are passing. Professional men used to think it was unethical to advertise. To-day they are willing to pay publicity—display advertising at regular rates. Men, and women, too, of this type no longer depend upon free reading notices. Professional people who refuse to advertise and who seek so-called puffs, or write-ups, are now the exception. They used to be the rule.

Perhaps from the time when the memory of newspaper men runneth not to the contrary sough in every possible way for these messages also urged the committee of members. The intention of the series is to acquaint the public with the truth as to the principles of Osteopathy; with its colleges and institutions; with its hospitals and programs; with its research institutes; and with its advancements of therapeutic science in its own distinctive lines.

Edwin T. Jones, writing in The Fourth Estate, of New York City, in part says: "If this campaign proves to be successful, larger ones will follow. There are over 7,000 practicing Osteopaths in the United States, and a yearly contribution of $50 each would give the A.O.A., a fund of $350,000. This sum judiciously spent would greatly increase the demand for Osteopathy, and I think largely increase the desire of young men and women to study the treatment.

"Osteopathy was started in 1874 by Dr. A. T. Still, a western physician and surgeon of thirty year's experience. It has developed through medical practice which would quickly cure many before it has spread throughout the country and beyond. Great universities and hospitals have been founded and much research work has been conducted. Ten thousand practitioners have been trained and sent forth on healing missions everywhere. Trenton has five of these doctors who have advanced in the national association's advertising plan."

There are great educational value in such campaigns. Everybody reads these daily and greater results can be obtained through publicity than in any other way. Much disease has been prevented by giving publicity to preventive measures. That is why the Times publishes one of Dr. Copeland's health articles daily. Many cures have been effected through proper presentations of curative agencies. Much illness and many deaths have resulted through ignorance; through the failure of those who knew to acquaint those who need to know with the means of prevention and care.

Surely there is nothing unethical about saving life and averting suffering through publicity. It is, indeed, a crime not to acquaint the people with whatever is for the public benefit.—April 10th.

Treat Football Players?

The more I think about your idea of our care for football teams, the bigger it looks to me. Since writing you I have read an article, "Football and the Osteopath" by A. M. Weston, in the October Western Osteopath. Can't you make a special drive to get shop talks on "What I Did for the Football Team?" It would bring out a lot of fine points both as to treating injuries and promoting Osteopathy—Geo. M. McCole, D.O., Great Falls, Montana.

A Voice from the Flood District

Gentlemen: Sent list of names today for the "million run" pamphlet. Please do not mail pamphlets before June 1st. Water is out of the business section now but many residences are in one to eight feet of water yet and it will be June 1st before people can get moved back home and mail delivery established. Thanking you for your consideration in this, I remain fraternally—H. W. Welch, D.O., Beardstown, Illinois.

Enclose Stamped and Addressed Envelope

You might tell our professional brethren who write to Florida D.O.'s inquiring about climate and prospects for practice to send postage. We spend enough In time without being expected to pay out our money.—A. L. Evans, D.O., Miami, Florida.

Justice to Dr. J. Stewart Moore

Dr. Ada N. Foote of London, England, has called our attention to a mistake in the November issue of The O.P. In the article entitled "Wonderful Progress of Osteopathy in the British Isles" on page 2 mention is made of the toast proposed by Dr. J. Stewart Moore of London. It reads "in both countries great advancement was being made (in Osteopathy) and this not so much because of the inherent rightness of the principles of Osteopathy." The error is self-evident and was due to a line of copy being dropped by a compositor.
Faculty of the New A. T. Still College of Osteopathy and Surgery

Much interest will be felt by the profession in the announcement of the personnel of the faculty which has been signed up by the new A. T. Still College of Osteopathy and Surgery. The group of men embraces well-known veteran teachers and practitioners who are entirely worthy of the new institution, and The OP congratulates Dr. Geo. M. Laughlin on his selections as far as they have been made.

The list is as follows:

We are Teaching the Electronic Reactions of Abrams

As Authorized and Endorsed by Dr. Albert Abrams

Our laboratories have been especially equipped for the proper teaching of this most amazing and accurate method of diagnosis and treatment which is co-extensive with the field of Osteopathy.

Physicians taking the course are thoroughly drilled in the philosophy and technique of electronic diagnosis and treatment and have the opportunity of studying cases of patients being successfully treated for carcinoma, sarcoma, tuberculosis, strep. infections and other hitherto incurable conditions.

Every progressive Osteopathic Physician should investigate this wonderful new field for research and thereby equip for a larger service.

"Where There Is No Vision the People Perish"
HOW CAN YOU TELL UNLESS YOU TRY?

A clinical test of DIONOL in any condition marked by LOCAL INFLAMMATION will convince the most skeptical that DIONOL produces definite and in many cases remarkably beneficial effects.

DIONOL is intended for local application only; over the chest in pneumonia or bronchitis, over the throat in tonsillitis, etc. Its action depends upon and is explained by certain scientific principles governing the electropathology of inflammation.

Its clinical results have been such as to have brought about its steadily increasing use by the profession. You owe it to your patients as well as to yourself to TRY DIONOL. A clinical test will speedily demonstrate its practical value and its actual efficiency.

**THE DIONOL CO. Dept. 12 - Detroit, Mich.**

Acute Infections of the Nose and Throat

The great dangers of naso-pharyngeal infections extending to the various sinuses and ears, or of being the fore-runner of graver respiratory diseases, particularly pneumonia, make painstaking and effective treatment of even the simplest cold both urgent and necessary.

The ease with which Dioxogen will quickly control the great majority of colds, and not only avoid their obvious dangers, but give the patient gratifying relief from local congestion, with its often severe discomfort and distress, emphasize the desirability of employing it at the earliest evidence of an infection.

Owing its efficiency to the liberation of pure active oxygen—Nature’s own antiseptic—it is no wonder Dioxogen fills the place it does in the treatment and prophylaxis of nose and throat colds.

**The Oakland Chemical Co.**

59 Fourth Avenue - New York

"Two to four teaspoonfuls of Dioxogen to a half glass of warm water makes an ideal gargle or nasal spray."

**THE DIOXOGEN TREATMENT OF NOSE AND THROAT Colds**

At the earliest possible moment the nose and throat should be swabbed thoroughly though gently with cotton pledgets saturated with Dioxogen diluted one part to three of warm water, especially care being used to reach back of the faucial pillars. If the condition indicates a severe infection, this swabbing by the medical attendant should be done twice a day. In addition, the patient should spray the nose and throat every hour or two with Dioxogen in a strength of two to four teaspoonfuls to a half glass of warm normal salt solution. The rapid control of the infection means grateful relief and the effectual prevention of complications and sequelae.

New Orleans Osteopathic Clinic for Children
Shown on the Silver Screen!

March 19th to March 25th was Osteopathic Week in New Orleans. Osteopathy ruled the town: Sunday and daily newspapers in big and bold front page headlines, in columns of type and large illustrations, told of the doings of Osteopathy; leading movie houses showed osteopathic pictures on the screen, responsible for all of the above was the opening of the New Orleans Free Osteopathic Clinic for Children by Dr. Henry Tete and his assistant, Dr. Eugene Bueler. New Orleans crippled and suffering little ones will all be taken care of in the Clinic, all receive relief in their pains and many even entire cure through Osteopathy’s remedies. Let Dr. Tete, himself, tell how it happened:

Dr. Sammuel L. Scorthorn, President AOA, has a happy faculty of getting people to do things they ought to do, but who somehow or other simply have not done them. I have often wished that we had a Free Clinic for Poor Children, but there were at least twenty reasons why I did not start one. When, therefore, Dr. Scorthorn wrote me and told me that he wanted me to open a Free Clinic in New Orleans, I wrote back and told him that with seventy-five people a day to treat and with only one assistant and with my duties as Secretary of the State Board of Examiners, Secretary of the State Association and Councillor for the osteopathic Council of Defense and Education “which was my pet hobby,” together with my series of lectures, etc., etc., I could not do it. Here is where he got in his fine work. He wrote back that on account of the very reasons I mentioned I was the right man to start the Clinic.

Now I had no more idea of how to start a Clinic than I have of how to fly, so I wrote to my friend Dr. Millard and got a printed form telling me exactly how to do it. I read it very carefully and I wish to recommend it to anyone who wishes to start a Clinic.

The first thing I did was to write a letter to the editors of the three leading daily newspapers upon my State Board letterhead, in which I said that at the request of President Scorthorn, I would open up the following morning a Free Clinic for the Poor Children. I invited them to send a representative.

I did not know where to hold the Clinic. I considered several hospitals to which I could gain entry and several church societies, but I decided to use my own office, having four large operating rooms and a large reception room, capable of handling fifty or seventy-five people. I decided to make it an early hour so as not to interfere with my regular patients, so I made it 8 to 9 A. M. on Wednesdays and Saturdays.

Tuesday night I went to bed in a peculiar frame of mind. I said to myself that I had bitten off a big chunk of work and that I must get up early to tackle the job. Wednesday night I went to bed happier than in a long time: I felt I had started something for Osteopathy. The first case in the Clinic was a little Russian boy with a dextrotole paralysis, which some idiot had immobilized in an extended position with the forearm flexed and had kept it so for eighteen months. With the assistance of two friendly surgeons and a plaster cast expert, in one hour we succeeded in cutting

Clinic scene from Dr. Tete’s Osteopathic Film. “The pictures were taken by the Harco! News Service and as far as I know are,” says Dr. Tete, “the first moving pictures of an Osteopathic Clinic taken by a News Service.” In the three hundred feet of film is shown a group of crippled children, each child receiving individual examination and such treatment as the particular case calls for. The picture was shown in the leading picture houses and, it is estimated, viewed by a hundred thousand people who had never before seen an osteopathic treatment. Film is available for use in your home town if you desire it. Dr. Tete will gladly send information to any one interested.

Special Information for Osteopaths

Under the laws of some States osteopaths are prohibited from using anything of a drug nature.

Dionol and Emulsified Dionol have no drug contents whatever and hence do not come under these restrictions. Their action is in strict consonance with osteopathic principles, being entirely mechanical, hence no drug re-actions are possible.

Osteopaths, throughout America, are using large quantities of these preparations, and there has never been a legal exception taken to their use, excepting in one case, and when the authorities learned the above facts the case went by default and they never even appeared against the doctor in question.

Dionol treatment is the only remedial agent that we are aware of that acts strictly in a mechanical sense and without drug reaction and which may be safely employed, internally or externally by drugless physicians generally.—The Dionol Co., Garfield Bldg., roit,Det Mich.

"Where There Is No Vision the People Perish."

THE OSTEOPATHIC PHYSICIAN

away this medieval coat. The condition of the child when the cast was removed was pitiful. The head of the femur was an inch and a half down and away from the glenoid cavity. The deltoid seemed entirely gone. The newspaper reporters sent for their camera men and took pictures—before I forget it I want to say that this case after six treatments is able to move the shoulders and wiggle the fingers and that the separation has about disappeared.

Several cases of birth palesis and several cases of post Polllomyelitid paralysis came next. The newspapers with five or more headlines across the face, "Free Bloodless Surgery Clinic Opened for Poor Children, Osteopathy does much good in New Orleans," etc., etc.

The following Clinic morning, which was Saturday, our cases increased to five or six more and the movie people stimulated by the newspaper publicity, which I had secured, asked permission to take pictures, which was granted them.

These pictures as far as I know are the first pictures showing upon the screen an Osteopathic Clinic, showing the examination and treatment of the children osteopathically. They were wonderfully well received by the public, and were shown in the Strand Theatre and in other leading moving picture houses. The Junior Orphneum, for instance, with a seating capacity of 2,000 people, with five shows a day, exhibited these pictures for four days at each performance. In all, I judge that over 100,000 people, who had never seen an osteopathic treatment and examination, and who did not know anything about Osteopathy, had the opportunity of seeing a visual representation and reproduction thereof. Seven other moving picture houses continued to show these pictures in suburban houses, after which the pictures were sent to any cities where there is a local demand for them as an Educational Film.

One thing above all these pictures show and that is the specific adjuctive technique—clearly showing that Osteopathy is not massage.

Of course these pictures were taken without previous rehearsal or drill. The examination and treatment was given to children whom I had never seen before and who had never been treated and consequently we were astonished at the good results obtained. The pictures cover about three hundred feet of film with the titles.

So wonderful indeed were these pictures that I have in mind the preparation of a 1,000 foot film of an Educational Character, with patients of different types, showing the technique used in different corrections, such as cervical, lumbar, mid-dorsal, lumbar and pelvic adjustments, together with such detailed scenario as would bring out clearly the fact that Osteopathy is "That School of Healing which lays chief emphasis upon Structural Integrity and which for the most part treats disease by adjustment."

Our Clinic has grown to thirty-six children. We handle (that is myself and assistant) this number easily in two hours. They all seem to be doing well and although I have always been a specific technician, I have proved to myself that the short, snappy, specific adjuctive manipulation is real Osteopathy.

My message to those who are able to do so, is to start a Free Clinic in each city of over 5,000 people. You can make the time, you can do the work, you can succeed and you will be surprised how the public will rise up and back you up and how they will be loud in their praises. It is indeed another exemplification of the saying, "It is more Blessed to Give than to Receive." It is an application of our Rotary Slogan "Service above self."

1874—1924

Natural Therapeutics

is playing a more and more important part in the prevention and cure of disease. It is the hope of suffering humanity—taught and clearly explained in the

LIBRARY OF NATURAL THERAPEUTICS

By Henry Lindlahr, M.D.

A veritable mine of valuable information for physicians and laymen.

Volume 1—PHILOSOPHY OF NATURAL THERAPEUTICS—describes the fundamental laws and principles undergirding the processes of health, disease and cure; these laws destined to revolutionize the theory and practice of medical science are not yet taught or applied in any of the recognized schools of medical or drugless therapy.

500 pages, cloth, $2.40.

Volume 2—PRACTICE OF NATURAL THERAPEUTICS—describes the most efficient natural methods for the prevention and cure of disease; raw food, milk diet, fasting, etc.; hydrotherapy; curative exercises; prenatal and postnatal care of the baby; treatment of acute and chronic diseases, including nervous, mental and psychic disorders.

482 pages, cloth, $2.40.

Volume 3—NATURE CURE COOK BOOK AND A B C OF NATURAL DISETETICS—Part I, 1,000 vegetarian recipes. Part II, reduces food chemistry and curative dietetics to an exact science.

489 pages, cloth, $2.40.

The principles in these and other books by Dr. Lindlahr have been successfully demonstrated for twenty years in the Lindlahr Sanitariums at Chicago and Elmhurst, Illinois.

XIII—Expenses Not Usually Considered

HEALTH
(Continued)

Last month we were talking on the health and efficiency of the average doctor and what he should do to keep the things in life that he should. This month we wish to continue the topic.

Fourth. Careless in diet. Most everybody sits too much. One way or another how to come to the house and to keep the mind clear should live up to the best conditions. This has been known in a few instances. Those who do that usually end up shivering because their blood does not circulate well and they are too much for lack of exercise or some diseased condition by putting up great amount of clothing.

Occasionally we see a physician who takes pride in being able to stand up against exposure. Exposure gradually depletes the system. There is a certain hardening process where there is a reaction in the body to effort, exercise, or fighting the elements. Frequently, in our fight against the elements, the body is gradually worn out and after a while the body should not expose oneself for the purpose of hardening the body. Rather, one should practice hygiene and eat like a health enthusiast in a way to keep the body up to the best condition. This will make it better prepared to stand up against the vicissitudes of life.

Fifth. No definite exercises, baths, or daily deep breathing for health. This heading is for emphasis, as it was spoken about in number three. Physicians who know the importance of definite exercises, hygiene and deep breathing in not to have this point emphasized. However, from experience and observation, it seems that many physicians do not put into practice many of the habits they know and especially a definite and well-planned program along this line.

Exercises. Exercising, just before breakfast, are very beneficial and will go a long way toward starting the day right. A hot bath should be taken once or twice a week for cleansing purposes and the cold bath should be and refreshing. Deep breathing should not be neglected. The room should be well ventilated so that the air will be fresh.

A regular program should be carried out along this line. Sometimes one may get a little tired of it, following it every day. A good solution for this is to skip a day or two and then begin fresh again. A good custom is to break up one’s program once a week, say on Sunday and more often if necessary to keep up a proper relish.

Sixth. Unclean in person. We have known many men and even some doctors who were very much of body. They were so unclean that they developed a disagreeable odor. They not only did not bath often enough, but they did not keep their teeth clean nor their mouth, hair, or finger nails. All this makes for a bad physical condition and of course reflects on the psychology. There is a tendency to gradual degeneration of the body.

Seventh. Fear, anxiety, worry. Some people fear the loss of health, some fear dependent age, and some fear the fear of the loss of health. This makes them anxious and causes worry, which makes a favorable condition for the body to seek up with injuries, aches, or pains. It makes both the body and mind into a state of inefficiency.

Chico Hot Springs
Sanitarium and Hospital

Located in the heart of the Rocky Mountains at an elevation of 8000 feet. Open the year around.

The Mineral Water baths and drinking is second to none. Sanitarium, Swimming, Gastro-intestinal, and kidney troubles.

Hospital is completely equipped with Laboratories X-Ray and operating facilities.

Special attention to surgical cases.

G. A. Townsend, D. O., M. D.
Surgeon-in-Chief

Emigrant, Montana, Post Office
The Joys That Await You at Los Angeles

It is the desire and hope that every member of the AOA will splash onto the horizon of the future an unreserved resolution, a wanton illation, to verify the vagaries, and treat his visual and mental purple to a point of catalepsy anent the much vaunted glories and splendors of California, by attending the 26th annual AOA meeting in Los Angeles; all of which is to betide July 3rd to 8th.

The meeting of the honest and honorable society of O. & O. L. is to be held the week following.

The program committee is prodding our eminent high-brows to prepare their best, and in addition are beating the bushes for little fellows with big and pregnant ideas—all with signal promise of facile delivery.

We understand that the different Entertainment Committees lie (like good Californians) awake day and night with their thinktanks in incubators; and are already assuring us of entertainment and service magnificent in comparison.

They promise to take us to their mountain tops and into their caves and cellars; they offer to take us onto and into their (sic) ocean with or without our bathing suits; take us to the world-famed Catalina Islands, en route to see the submarine gardens through glass-bottomed dories and masoolas; they invite us to judge their target practice; they invite us to a real old-fashioned Spanish barbecue, (also to hear them eat); to dive about and probe their harbor; they offer to show us the outside of the inside of Hollywood; suffer us to pick their oranges and ripe olives, and incidentally may slip us a lemon; take us over their oil fields, (which also lie in California). We shall be provided with a stippled "loomnum lavilleah," so that we may be found again should we get lost in the maze so enthusiastically promised by the halo-wearing D.O.'s of the City of Angels. Let's Go.

The Santa Fe railway has been chosen the official route, with Special Train leaving Chicago, Ill., 8:00 p.m., June 26th; Kansas City 1:30 a.m., the 27th, Albuquerque 4:35 the 29th, and one day, the 30th, at Grand Canyon; arrive Los Angeles 9:00 a.m., July 1st. Make your reservations now, with the Transportation Committee of your state, preferably over official line.

Write Mr. J. R. Moriarty, Division Passenger Agent, Santa Fe Rly., 175 West Jackson Street, Chicago, Ill., for descriptive circular of this trip. It is a "dandy."

Again, I say, make your reservations early—J. M. Fraser, D.O., General Chairman, Transportation Committee, Evanston, Ill.

Stop Treating—Start Curing

When more members of our Profession stop treating and start curing their patients, the will our profession catch up to the Law of Osteopathy—P. R. Hubbell, D.O., Detroit, Mich.
THE JUNE ISSUE

What the Encyclopedia Britannica Does Say of Osteopathy

That's the piece de resistance of the June issue of "Osteopathic Health." Nine pages. Fine, hard authoritative and will make good direct-to-the-home publicity for the science in general and for your practice in particular.

What a Fan for Osteopathy Galli-Curci Is!

That's a striking story. Anybody will find his attention challenged by it. The diva is a queen of generosity when it comes to giving benefits, yet she gives none to any other cause save Osteopathy. How would you like to have every home in your field know in what gratitude and affection this great singer holds Osteopathy?

The Titled Folk of Great Britain Are the Tickled Folk

Viscount Deerhurst, Heir of the Earl of Coventry, tells the interesting story how Osteopathy came to England—and stayed! Not only stayed, but grew! Not only grew, but conquered! The Viscount himself was cured of lameness by Osteopathy when everything else failed. Now he can't boost Osteopathy hard enough or fast enough to give vent to his gratitude. All told in the June issue of Osteopathic Health.

If you wouldn't use this kind of propaganda in your home field what would you use?

Most Powerful and Economical Advertising Never Adequately Used by the Profession

Direct Advertising—the distribution direct to homes of such literature as “Osteopathic Health” and “Herbless Leaflets”—is both powerful and economical. It has always been available to the profession, yet it has never been adequately used. Only a comparative few have maintained regularly distributions of liberal quantities. It has always paid well for Osteopaths. Few failures are recorded where such advertising has been done on a scale sufficient to win results.

What might easily be done by the profession in direct advertising will be realized when it is stated that a “reader circulation” of 15,000, 000 monthly could be obtained if 3,000 Osteopaths would each distribute the monthly copies of Osteopathic Health monthly: 3,000,000 homes would be reached and, as it is estimated (in accordance with usual method of calculation) that in each home each copy would have, on the average, five readers, the total “reader circulation” per month would be 15,000,000.

Think of it! 15,000,000 persons reading something about Osteopathy each month! Would such advertising create favorable influence? Would it be worth while? Most assuredly, yes. Who can doubt it? It can be made an actuality if the profession wants such advertising earnestly enough. The part of each individual is simple: Just send your order for the 1,000 monthly “OH” mailing list plan.

The Bunting Publicity Service for Osteopaths will do the rest.

Do you want Osteopathy explained to 15,000 readers monthly? If so, do your share; use 1,000 “OH” monthly and urge others to do likewise. Keep up the agitation going until at least 3,000 Osteopaths are circulating 1,000 a month each. Then these aggregated co-ordinating distributions will represent one great Nationwide osteopathic direct-to-home advertising campaign, reaching 15,000,000 persons monthly.

Let it be done! Why not?

Short Lecture for New Patients

Every new patient means a lecture on Osteopathy. I show a chart of comparative spines. Explain what is meant by various lesions, pinched nerves, etc. The result of same. Then talk to them about Osteopathy, about its treatment just what you are doing and what new treatment does—Daisy D. Rieger, D.O., Billings, Mont.

Educates While Treating

I talk to my patients first about their own case. Have they followed Instructons? I inquire as to results of last treatment, etc. After their own personal case is well taken care of I then talk to them about Osteopathy, about its institutions, about its hospitals, about its organizations, about our research workers and what they are doing, about their successes and their failures in their work. Write and give away. Send our publications, our clinics, our colleges and courses of instruction—comparing Osteopathy with its competitors and imitators.—Albert U. Jorris, D.O., LaCrosse, Wis.

Gain Patients’ Confidence

The first thing to do in practice is to establish confidence with your patients. Diagnose their cases. Do specific work and explain with each treatment just what you are doing and what effect it should have on the condition in question. Branching out further in your conversation, if certain things should come up or certain conditions follow this particular trouble, teach your patients how ably you can handle the situation.—T. W. Posey, D.O., Bowling Green, Kentucky.

Near Osteopaths the Real Menace

The Chiropractor who is a quack Osteopath is the one grave menace to Osteopathy as a profession. He preaches our doctrines. He bids for the anti-drug sentiment. He takes the wind out of our sails. He is a wonderful advertiser. He outnumbers us. We must meet his advertising propaganda or go under. For college he attends a school of advertising—Geo. A. Kerr, D.O., Benton, Ill.

System Wins

Work by appointment. Make them keep those appointments. Give due credits. Give due credit to the profession, do your share; use 1,000 “OH” monthly and urge others to do likewise. Work by a system, don’t worry.—E. H. Cossor, D.O., Dayton, Ohio.

"Harvest Leaflets" Have a Potency All Their Own

It is the supreme merit of our line of 50 different "Harvest Leaflets," ranging from one to 16 pages each, that they are the easiest, quickest and cheapest advertising media of high quality that one can put out to special mailing lists. The cost per thousand persons mailed is so low that any practitioner really interested in building up practice or osteopathic prestige in his own field can afford to mail these out in series every week or ten days. The results from using them are found to be so good that any vigorous campaign of this sort, entered into for a period of three to six months, will almost pay for itself from new patients obtained before the campaign has entered well into the second month.

The proper strategy involved in the use of "Harvest Leaflets" is to regard them as the low-cost, wide-distribution, quickly-repeating medium for attracting first attention and producing inquiries. It is usually an easy matter to find out what an inquirer's special interest in osteopathy may be—that is, what and whose disease he is seeking help for. By such follow-up science to select and supply such brochures as most nearly cover that subject.

Any one who wants quick and extensive results will be pleased at the productiveness of this system of advertising. And the charm of it is that it benefits osteopathy as a whole by benefiting most the osteopath who puts this propaganda machinery in motion. In other words, the following story fits it back with a profit besides. That proves quite satisfactory, as a rule, to the one who shows the enterprise.

Don't Value Your Services Too Cheaply

The cheap Osteopaths are still with us. We have one in Guthrie who in a display advertisement is offering 13 treatments for $15.00 and 15 residence calls for $24.00. Can any one better that for cheapness? The cliques charge more here and their ads are more dignified—Ellen Shultz, D.O., Guthrie, Okla.

Health Buckle Supplies a Long Felt Need

It is generally conceded that many of the Osteopaths who can be directly traced back to the wearing of tight belts. Elastic belts supposed to do away with the objectionable features of the ordinary belt and go and get the best of both worlds, though less healthful because less restrictive. Boys, young men and such old men as look for style continue to set aside suspenders for the more stylish, though less healthful belt. Dr. J. P. Gordon of Rockford, Illinois, an Osteopath, is placing on the market a Health Buckle Belt, which, it is claimed, does away with all the objectionable features of the ordinary belt and the so-called elastic belts. By means of the Buckle Spring attachment wearers body is left free in all its movements; abdominal expansion during respiration is permitted; development of tissue around the waist is not obstructed; the normal position of the intestines remains unchanged; in a word, the Health Buckle Belt combines style with real utility. To see the belt is to want one. Doctors will surely want to recommend it to their near patients. The prices are reasonable and your satisfaction guaranteed or your money will be refunded. Health Buckle springs come nickel, silver and gold plated.

A kick against fate is often but an apology forfileless.
DIRECTORY of
Osteopathic Hospitals and Sanitarium

Detroit Osteopathic Hospital

C. Haney has removed his office from the Ferguson Building to Suite 1221-23, De Paul Hospital, Chicago.

Dr. J. J. Maguire has opened an office in Los Angeles, California.

Step at Grand Junction, Colorado

The famous Rocky Mountain Conference will be held in the dead of winter, beginning June 26th, a week before the National Convention of the American Association of Osteopaths going to Los Angeles to stop a few days in the metropolis of the Western Slope. To make this unique an association the Osteopaths of the Dakotas have purchased a hotel for $15,000. Dr. Geo.Laughlin, famous osteopath of Grand Junction, and Benoit Bullock, osteopath, will be present to lecture to their friends at this time and the hope is to bring patients for operative care. There will also be present eminent technicians, and we urge the profession to come and be examined and receive treatment from some of the best men in our profession. A registration fee of $5.00 only will be charged all not belonging to the Colorado Association. Very reasonable fees to pay expenses may be charged for surgical care. Rooms for perfectionists North of Grand Junction are some of the finest natural playgrounds of the world. The Monument Valley is the wonder of the world. The top of Grand Mt. affords a magnificent view of the Rocky Mountains, and to Los Angeles will not be long or tiresome if you catch the train at 7:15 a.m. at Grand Junction, half-way station. Correspondence solicited. We speak especially of those who are near us to notify us and to make reservations.

C. W. Young, President.

H. Grise of Watertown, Wyo.

S. L. Asmus, Lake Tahoe, Cal.

H. F. Price, Chicago, Ill.

Ralph Leslie Wooster.

Robert Rehm Reder; Walter Arthur Sliker; Amanda Ph.G.; Ralph Leslie Wooster.

THE OSTEOPATHIC PHYSICIAN

April 25, 1923

Dr. F. C. Jones of Los Angeles, California, March 26th, age 62.

Dr. A. H. Benefiel of Spokane, Washington, April 1st, of pneumonia. Dr. Benefiel for a long time took an active part in the scientific department of the Association—Dr. E. C. Sinnott.

Dr. Walter E. Elfrink, H22 Locust Street, Chicago, Ill., sailed from New York on April 25th. He is in the service of the Surgeon General, Department of War, for a few months in New York City and other places in the East making a study of nutrition. He reports that physiological chemists have recently given the lab to serious study of nutrition. He plans to attend the opening of a new laboratory at the University of Chicago. The lab is equipped with the latest laboratory apparatus and the lab is to be used for research work.

Mrs. Mansfield, wife of Dr. B. P. Mansfield of DeKalb, Ill., sailed from New York on April 26th for a several months' visit in her home village, Elberfeld, Germany. Mrs. Mansfield came to the United States with her sister in the summer of 1911 for a visit with relatives and was prevented from returning home by the war. During the war she stayed in this country and studied nursing in Chicago where she has spent several months in New York City and other places in the East making a study of nutrition. She reports that physiological chemists have recently given the lab to serious study of nutrition. She plans to attend the opening of a new laboratory at the University of Chicago. The lab is equipped with the latest laboratory apparatus and the lab is to be used for research work.

Dr. H. Grise of Watertown, Wyo., was a member of the Board of Directors of the American Association of Osteopaths, and was a past president of the Association. He is survived by his wife, Mrs. Schmelke of Chicago and a daughter, Grace.
