Between the dates upon which the foregoing orders were made, Boyd modified his advertisement so as to meet the approval of the State Board of Health that a certificate was issued to him; but the modified advertisement presented by the Board was not satisfactory to the applicant, and the Board refused to issue a certificate.

"The State Board of Health may refuse certificates to individuals guilty of unprofessional or dishonorable conduct, and they may revoke certificates for like causes, after giving the applicant an opportunity to be heard in his defense before the Board." This section of the statute indicates the board duties which are quasi judicial in their character. The question whether the applicant is guilty of unprofessional or dishonorable conduct calls for the exercise of judgment and sound discretion. It is a question as to which the board must hear the evidence and pronounce a conclusion. The principle of law is well settled in the law that mandamus does not lie to review official acts which require the exercise of judgment and discretion.

In determining whether a party is guilty of such conduct as would in common judgment be deemed unprofessional or dishonorable, these words must be understood to mean something more than compact, no more difficult to detect than the word "dishonorable." Many cases have been cited where the board, having official acts of a nature which require the exercise of judgment and discretion, refused to perform its duties. In some cases the board has not defined what is unprofessional or dishonorable conduct; in other cases, the board has defined it in the manner of law, and in cases, the board has defined it in the manner of law. In determining whether a party is guilty of such conduct as would in common judgment be deemed unprofessional or dishonorable, these words must be understood to mean something more than compact, no more difficult to detect than the word "dishonorable." Many cases have been cited where the board, having official acts of a nature which require the exercise of judgment and discretion, refused to perform its duties. JOHN MASON GOOD, M. D., F. R. S., says, "The science of medicine is a barbarous jargon.

Prof. Valentine Mott, the great surgeon, says, "Of all sciences, medicine is the most uncertain."

Dr. Marshal Hall, F. R. S., says, "Thousands are annually slaughtered in the quiet sick room."

Prof. S. M. Goss, of the Medical College, Louiseville, Ky., says, "Of the essence of disease very little is known. Indeed, nothing at all."

Dr. Huskien, a great German physician, says, "That the greatest mortality of any of the professions is that of the doctors themselves."

Dr. Abercornbie, Fellow of the Royal College of Physicians of Edinburgh, says, "Medicine has been called by philosophers the art of conjecturing, the science of guessing."

Dr. Benj. Rush says, "The art of healing is like an unroofed temple—uncovered at the top and cracked at the foundation."

Dr. William Kingdon says, "Medicine seems one of those ill-armed arts whose improvement bears no proportion to its antiquity.

Dr. Abernethy, of London, says, "There has been a great increase of medical men of late, but upon my life, diseases have increased in proportion."

Prof. Alonzo Clark, of the New York College of Physicians and Surgeons, says, "In their next to do good, physicians have done much harm. They have hurled thousands to the grave who could have recovered and left to nature."

Dr. Wakely, in the London Lancet, says, "A system of routine or empirical practice has grown up, vacillating, uncertain, and hopeless, in the treatment of diseases."

Prof. Hurler, the great German pathologist and teacher, says, "Medical science, at all times, has been a medley of empirically inspired facts and theoretic observations, and so it is likely to remain."

"Life is that calm principle which rules forth from Deity which vivifies all nature."—A. T. Still.

The object of the American School of Osteopathy is to improve upon the present systems of Surgery, Obstetrics and treatment of General Diseases in which the adjustment of bones is the leading feature.

REQUIREMENTS.

The course can be completed in two years—two terms of five months each, to be spent upon Anatomy. The remainder of the course to be devoted to practical work under the direction of an experienced physician.

All students must receive a grade of 90 per cent. to pass in Anatomy. No one admitted to the operating rooms until the first term in Anatomy is completed.

Tuition: $500.00 for the full course.

The new building has made good progress during the past month. The walls are completed and the roof of slate makes a fine appearance. Much of the plumbing is in, and many of the details of the inside finishing are all ready to be put in place. Every step toward completion is being watched with eager and anxious eyes, as all are looking forward with great expectations to the time when it will be ready for occupancy.

Miss Ella Fike returned home last Friday evening after a six weeks' absence in Kirksville, Mo., where she has been taking treatment at the Still Osteopathic Sanitarium for her sprained foot. Her many friends will be glad to know she has recovered and is at home. Miss Ella has many words of praise for this new treatment.

The diseases treated successfully by Osteopathy are those resulting from an abnormal condition of the nerves, blood vessels, or other fluids of the body caused by partial or complete dislocation of the bones, or abnormal action of the tissues. The following list of diseases, with many others, have succumbed to Osteopathic treatment, often when all else has failed: Brain Fever, Cerebro-Spinal Meningitis, Headache, Granulated Eyelids, Dripping Eyes, Pharyngitis, Blistiness, Polyposis of Nose, Catarrh, Enlarged Tonsils, Diphtheria, Croup, Whooping Cough, Typhoid Fever, Asthma, typhoid, Lymphatic Fever, Eczema, Fever and coldness of any part of the system, and Nervous Prostration. Osteopathy knows how to diagnose with accuracy the cause, and has the means to treat every disease which affects the body.

KIRKSVILLE—A. T. STILL.

To the Editor:

You may know, affords space in your column to give a transient sojourner an opportunity of expressing his thoughts and opinions, by a limited stay in your pretty and enterprising inland city.

More than ten years have elapsed since my last visit, and I find many changes and improvements, new business buildings and residences, modern in architecture a good many buildings which have grown up with the perfection of the Normal School. In the Normal School is a fixed institution, and does great credit to the people of the state who founded and encouraged such, and the people of Kirksville are to be congratulated on its location, and, as they should be, are endeavoring to increase their efforts to secure it. It is doing good work, and its graduates are among our best doctors.

While these changes mostly have taken place since I was last here, I notice many of the new, the natural law of disease and health—Barclay, Ringhals, Baum, Clark, and Porter, besides many others, who were pupils of Kirksville when Medical City was the shipping point, and goods and supplies were received there and freighted overland. Now there are railroads and express-wagons and other enterprises, the crowning institution of which and altogether the most important is the School of Osteopathy.

The Science of Osteopathy, Discovered by Dr. A. T. Still.

The mention of the school leads us to become somewhat reminiscent. About in the 50s, 1857, or 1872, we first became acquainted with this subject, in the Illinois State Normal School. It has then been struck with its individuality, originality, and one might say, by its very assertion of the facts and the doctrines which have been taught in the curriculum of a medical school would seem to be rare treat to those "closest to us." We did not meet them until 1874. It was on this occasion, after a few words socially, he proceeded in a limited way to unfold to us a new teaching—me, his disciple of the Science of Osteopathy, then in its swaddling clothes. He presented the facts of the science so forcibly and his arguments so logical and pertinent as to impress us all, and that the true law of man's body is embodied in a fact which the human anatomy had been brought to light. When he finished his talk, he asked me what was the law of his discovery (ossicular movement)? I was so convinced of its truth, that I at once replied: "Dr. Drew, you are correct, the law of man's body is ossicular movement and to one can conjecture the possibilities of the future of Osteopathy, and there is fame and wealth in it." My wife, after more thought, said, "I believe, Doctor, you have succeeded in the discovery of the science of disease and health, that you will succeed beyond your expectations, and there is more about of you than you can now see."

Ever since I have been anxious to note the development of Osteopathy, and have kept the science in mind watching its gradual progress over a period of years, and tracing the cases in which it has been applied, and the great changes it has wrought. I am now ready to exhibit the science as an emanation from the law of our being, and as such mankind is fast coming to know that it is the duty of all right-minded people to free themselves from the fetters of their pathway by right living, right thinking—studying and obeying the laws of nature so forcibly and his argument: Osteopathy, then in its swaddling bands, and its graduates are among our best doctors.

GREAT CURES EFFECTED.
Osteopathy The Modern Plan of Treating Patients.

DR. STILL'S MAGNIFICENT INSTITUTE.

Something About His Method of Treating Diseases.

From the Observer, Indianapolis.

At Kirksville, Mo., is practiced a science which dates the last half of the present century by Dr. A. T. Still. It is called Osteopathy, two consequences whose revision and literal translation signifies bone healing or relating to the cure of bone affections. The adaptation of the name Osteopathy for this modern plan of giving treatment to patients has been wisely chosen, and conforms happily with the Doctor's methods. A visit made by the Press reporter last week to the institute where so many remarkable reports have emanated concerning the marvelous success attained in restoring to robust health and perfect symmetry of form the hundreds of invalids who have come to Dr. Still's consulting rooms during the past year, an experience for the correspondent which removed from his mind every vestige of incredulity. The truth of these innumerable testimonials favorable to Osteopathy and the eminent doctor's methods. To begin a review of the incidents transpiring while being conducted through the building by Secretary J. E. Patterson, it is better to note the basis upon which a national endorsement as to the efficiency of this system of treatment, which provides a remedy for every disease that has achieved.

The foundation and chief manipulation of the bones and muscles as only years of study can safely direct, and which frees the veins and arteries from all disease has achieved.

The Modern Plan of Treating Diseases.

The Science of Osteopathy with a lecture hall takes up considerable space and is seated on the allare many. is each day the science of Osteopathy with which the Doctor's office is furnished to blend the colors in harmony, and in every way this magnificent building will prove to be a center of comfort and convenience. Later than December 20th the auspicious occasion marked by the unveiling of the edifice and its dedication to the Science of Osteopathy with a lecture by Dr. Still will take place. The three hundred and fifty patients, from twenty different states, who are being treated at present are forced by many more during the winter of '94 and '95. Although Dr. Still is always busy, yet every patient grants a word of welcome to all, and the all are many, as each day the nurses through with those assembled as did the reporter, to learn more of Osteopathy and Dr. Still.
