Dr. George M. Laughlin Founding a New College at Kirksville

To be Known as the “A. T. Still College of Osteopathy”

[From the Kirksville Journal]

A new college of Osteopathy is to be established on the lots recently purchased of Mrs. Pierce on the corner of Elson and Jefferson streets, as well as the two lots in the west. The building purpose of the cost is $500,000. Work is to begin on the building and it is hoped the school may be opened next fall.

Dr. George M. Laughlin, of this city, with prominent and well known osteopaths in the field are to be the promoters of the college.

The name of the new school is to be “The A. T. Still College of Osteopathy”, being named for the founder of the science.—April 28th.

This news will create a profound impression throughout the profession. Dr. George M. Laughlin has already made a reputation as a leader of one institution, and when he gives the news that he is going to build another no everybody will believe him. George is no flusterer.

Founding a new college of osteopathy nowadays would seem to most of us to be rather libelous undertaking, but if there is one man in the profession who is fitted to make a success of it unquestionably that man is George Laughlin. Now it is settled that he is to launch a new college we have no doubt he will put his own money into it liberally and that his mind will be fixed on the scientific and scholastic success of the institution more than mere money making. Of course that sort of policy wins money in the end—it can not fail to, and we believe that Dr. George is big minded enough to understand that fully. It seems to us, therefore, that this news is big with portent for the profession. Undoubtedly the profession has need for more and more students to be graduated every year. There is room for more colleges if they can be founded in sufficient financial strength and be conducted under right auspices to insire maintaining high standards. It would appear as if Dr. Laughlin can fulfill and guarantee both conditions.

The Kirksville Journal has always preached caution in founding new colleges, and has not hesitated to criticize such a proposed program on the part of those whom it did not think were fit for the task of being both capable educators and school managers, combined with sufficient capital to give assurance of distinct success.

We do not believe Dr. Laughlin falls short in satisfying any of these conditions. Of course the profession will wonder, and with some justice, how the founding of a new institution will affect the fortunes of the parent college. Most of us, we think, would hate to see the ASO decline. Certainly the OP would do everything possible to help the A. T. Still College of Osteopathy in every way. Probably the best way to help it is to give that amount to start the ball rolling.

College of Optometry to be Opened at Kirksville

To Teach Science of Eye, Ear, Nose and Throat by Osteopathic Methods

[From the Kirksville Journal]

Incorporation papers have been filed with the county recorder for a new college which is to be established in Kirksville. The corporation is to be known as the American Eye, Ear, Nose and Throat College Company and is composed of Dr. Geo. A. Still, Dr. S. S. Still, Dr. E. H. Henry, Mrs. Mie Deer, Hamilton and G. C. Brott, as stockholders. These persons also compose the board of directors.

The capital stock of the corporation as set forth in the incorporation papers filed, is $5,000 and is divided into fifty shares of $100 value.

The incorporation papers state that the new college will teach the science of treatment of the eye, ear, nose and throat by osteopathic methods, the fitting of glasses, and confer the degree of Optometry and issue graduate certificates in ophthalmology and otolaryngology.

The new college here will be opened in connection with the Specialty Hospital, but later it is likely a new building will be erected especially for the college.
A Distinguished Business Man’s Idea of How to Advance Osteopathy

In looking back over the history of our professional development and viewing our present activities and institutions that have been set up to service them, we would wonder if we are accomplishing the most possible from our efforts.

What an Efficiency Expert Would Say

I dare say that if an efficiency expert should survey our activities and institutions that his report would show how many defects, leaks, lost motion, duplications and irritations that an outsider, reading the report, would wonder among masses of waste. Are we accomplishing the most possible from our efforts?

Ponder Why We Don’t

Osteopathy is growing, to be sure it is growing, but is it developing as rapidly and as completely as it should? If not, why not? A few of the reasons, as I see them, is what I wish to discuss.

1. Osteopathic schools— are they as large, prosperous, independent and influential as you hoped they would be, after 25 or 30 years of development?

2. How about our organizations, local, state and national—are they functioning as efficiently as they should?

３rd. Does our equipment, as general practitioners or as a profession, come up, even to the reasonable expectations of those who work for the advancement of osteopathy, say 15 or 20 years ago?

To Help Our Schools Help the Profession

The question of schools for the teaching of osteopathy has been a pressing issue for years and is receiving the serious thought of the best brains of the profession. We all realize that schools are essential in order to train students, and that the science must live and pass on to the brains of the profession. Realizing their importance to the growth and development of our science, how shall they be conducted in order to fulfill their function and elicit unified support from profession and public.

Our schools that have been organized as endowed colleges have failed because of insufficient endowment. Those organized as non-profit institutions have lacked proper management, probably because there is a lack of initiative for any one to exert the unusual effort that is necessary for success. To destroy initiative is to destroy efficiency.

Stock Company Ownership Has Succeeded Best

The other plan, which is the most common, (and by the way, proven thus far to be the quickest) is the stock company plan, in which organization deriving its income from the student body.

To be sure, many objections can be made to this plan, and it is not the ideal plan on which to conduct an institution of learning; but it works, and so far has been the most profitable of all the methods we have; i. e., to help students to practice osteopathy.

Now what shall we as a profession do to help strengthen and develop these schools? Shall we lend our influence to the establishment of the AOAJ, or Shall we boost a private school that is conducted for profit?
THE OSTEOPATHIC PHYSICIAN

Students Are the Blood of Our Colleges

The school business is a hazardous business and requires big capital, intelligent and judicious management. In order to carry on this work we should support them enthusiastically. How shall we support our privately owned osteopathic colleges? In an outline form this question we should support them enthusiastically.

I. Our College and Yourself in the Essentials

II. System Given: By this method we wish to open an osteopathic hospital in every city in the management. At present the AOA IS where we think of, as to derive the most efficiency favorably with that of his community.

III. To Expand. Others are afraid to regular P. G. Course, as It June.

IV. Our Tuition: You build narrow and rigid that matter—yes, so; appreciate this fact. And why? Built throughout that and haza;rdous a hospital, but contended it was essential.

V. We Will to Meet this Demand. For instance, you have succeeded in getting at this crucial hour. We are on the turning point of our development. We must either

VI. We Are on the Make or Break

Candidly, I say there is no excuse for anyone present to know that those of us who have had the opportunity to study the great principles underlying the science that the “Old Doctor” was the first to teach, and explained "it was only a matter of a short time until we would have a hospital that we would all feel sick of an Osteopathic atmosphere! Shame rest upon us until we busy ourselves, and keep busy until we accomplish this!

How a Man Made Us Out to Be Pilots

A man came to my office a few weeks ago inquiring for an osteopathic hospital. His daughter was afflicted with what he called osteopathy at the hand of Dr. Hilder; he had been caring for osteopathic. He said they had no osteopaths in this town, so he took her to Tacoma, and was told there was no hospital there, so he thought he was embarassed. Indeed, I almost wished I could say “we don’t believe in hospitals.” However, I explained that the regular hospitals had been so fair to us, and had made us so welcome during the past ten years, that she fell in love with us.

He asked, “Are you people admitted into the regular standard hospitals on equal standing with the M.D.’s?”

“Yes,” I replied, “they used to let us take patients into the hospitals under the same conditions, until the new “standardizing regulations were imposed rigid. We have made special arrangements with the management or else use a pull with some influential M.D., in order to get a patient into one of the larger hospitals.”

Dr. Hilder’s 10-Year Prophecy Not Fulfilled

My caller was surprised, and frankly told me so in language that one could easily understand. He had formerly lived in St. Louis. His mother had been restored to health by this system many years ago. The family has been grateful and loyal to osteopathy ever since. He said Dr. Hilder apologized at the time for taking his business away from them. To do this was to put oneself below the level of an osteopathic hospital, but contended it was essential to have her where she could get osteopathic care. He added, and explained “it was only a matter of a short time until we would have a hospital that we would all feel sick of an Osteopathic atmosphere. I said, “that within ten years there would be an osteopathic hospital in every city in the United States.”

Naturally!

So, naturally, this man expected to find accommodations in a city like Seattle. He wanted to know if we had abandoned our former ambition of becoming general practitioners, with all the training and equipment to deal with all kinds of disease and accidents to which the body is subject?”

I assured him that was still our ambition. Then “Why don’t you build hospitals?” he demanded.

I thought to myself “it is too bad the AMA didn’t think of their plan to ‘standardize’ their hospitals 10 years ago. It has been much better off today than if they had!”

The Way to Organize a Hospital

Now there is only one way to get a hospital in a city like Seattle—that is, for the osteopathic profession to unite on a certain feasible plan that will work justly for all. Every member should be interested financially and otherwise. I believe a stock company should be formed and every member of the profession should subscribe for stock according to his or her ability. A board of directors should be elected by stock holders to manage the hospital on a purely business basis. If you can make a success of your plan, you will have demonstrated that the profession is well organized on a business basis and have a going concern, you can then get support from the Kelly correspondence that we desire and these, and have for years in this State of Washington, in Spokane, Seattle and other places, and in San Francisco. I have followed prospering cities not an attempt has been made to open a regular Osteopathic Hospital to care for the sick. I think the sick would be enough for us to make.

Joy in Accomplishment

When Washington crossed the Delaware and fell upon the Hessians at Trenton, New Jersey, destroying their leader and capturing their whole army, the external greatness of his victory could be explained to some extent, outside of the fact that Washington was a wonderful general and a courageous fighter. He went against hirelings, a bunch of soldiers who were fighting, or rather pretending to fight, a war for the money there was in it. They had no personal desire of the heart to subjugate the colonies, to fight for England, nor against anybody in particular. They were merely hired for so much a man. They were devoid of any worthy object in life, they were without patriotism, without spirit or morale. Consequently, they were not vigilant about keeping a careful lookout for their enemies. So, when Washington and his army came they were unprepared for successful resistance and in fact their organization was concerned, and being without spirit, it was not difficult for them to surrender under trying conditions.

Just so, with a physician. If he is practicing merely for the money, if he is only a hireling, if he takes no joy in real accomplishment, if he does not value himself or his ideals and personal growth the goal toward which he is striving, he is not likely to become a high class physician. The highest pleasure should be to make a successful diagnosis and study to solve the most difficult problems connected with his practice and profession.

He should take the keenest delight in making a distinctive growth from year to year, in being able to look back over each twelve months and see that he has made a distinct advancement in some of his professional lines. He should be able to see that he is a better physician, more able to cope with disease, more able to render a high class service than he was the twelve months previous. One who gets out of the chair, keeps on continued growth, and rendering honest service is on the road to become a physician of credit and honor, if he is not already.

Honesty

A physician should keep in mind the motto that any business transaction conducted by an honorable man should not be one-sided. Both sides should be benefited. The physician frequently cannot guarantee a cure or even any great benefit. The position which he should hold in every case is that of honesty. He should make as careful a study and diagnosis of his case as he honestly can, rendering honest service in that instance for which he should charge a reasonable fee. When his diagnosis is dubious, he should tell the patient exactly what he believes is the cause, and the outcome will be with the treatment he would give, just as far as possible.

The patient is left to choose whether he wants to employ the physician to render the service which has been indicated. If there are prospects of failure and complications might arise, this should be explained to the patient so that unlooked for disappointments will be reduced to a minimum.

No success can be built permanently on dishonesty. Good salesmanship, then, of one's service or goods has in it no element of misrepresentation. One who sells his service only to benefit himself, not only loses the confidence of the patient, but forfeits his own self-respect. No osteopathic physician who is at all able can expect to find favor with the public. Deep confidence in one's own work produces an enthusiasm that is irresistible. This condition of mind cannot exist in the presence of pettiness or chicanery.

Some Rules for Right Study.

(1) Time.

One who is going to be efficient and grow in his practice must study. The best way to get anything done in the way of study is to arrange a definite schedule time. Two or three hours in the evening or in the morning are best, say from 7:30 to 9:30. For one who is busy in practice, however, it is often inconvenient to study at that time. Whatever schedule is made for older men, it should not be more often than every other week on Monday, Wednesday, and Friday, from 7:30 to 9:30 in the morning. Younger men can study every day and put it in the evening, if they prefer.

One should not study when tired or within thirty minutes after a meal. Everyone should have Saturday evening and Sunday free from the grind of a regular course of study. A certain definite course of study should be laid out to follow for the year. Some particular authority, or book on some particular line should be mastered during one year, for instance, a book on technique, a book on diseases of the eye, one on official work, one on obstetrics, mental and nervous diseases, or nose and throat.

(2) Concentration.

It is essential that one concentrate on some particular study. If one attempts to scatter over a field trying to study every kind of thing that might come up in looking over the magazines, he does not do anything worth while. One should learn to concentrate the mind on some particular line to the exclusion of everything else. If one would like to make a successful study, he must learn to concentrate his attention and energy much earlier. If one would take one subject and master it during the year so far as one book or authority is concerned, then take a post graduate course during the vacation time on that particular subject, he would make a distinct advance during that year.

(3) Faith.

In order to study with proper heart on any line, one should have faith in what one is studying. It is all right to step aside sometimes to investigate certain transcendent philosophical problems, but study to the best and make the most practical use of one's time, it is essential that the feet be kept on the earth and that practical things in which one can readily believe should engage the attention.

(4) Do the Things Learned.

If one is going to study to the best effect, each thing that is learned should be carried out in his daily practice, but in order to do the best and make the most practical use of one's time, it is essential that the feet be kept on the earth and that practical things in which one can readily believe should engage the attention.

(5) Keeping Your Own Council.

It is well in making your plans not to tell all the details to the general public or even to your best intimate friends before you do them. Plans that are practical, feasible and adaptable to one's own practice should be carried out without too much professional bragging. They do not see the things that are adaptable to your own mind and your own practice. If one is often saying things that will cast a damper over your enthusiasm.

After having done certain things and performed certain accomplishments, or made certain advancements, one should not tell what one's plans are or should be. Plans that are practical, feasible and adaptable to one's own practice should be carried out without any boasting or professional bragging. They do not see the things that are adaptable to your own mind and your own practice. If one is often saying things that will cast a damper over your enthusiasm.

The Hour Has Struck!

We still have for sale twenty-nine Bunting Building Bonds of $100 denomination paying 7 per cent. We need to market this remnant of our bond issue to finance our new building. The building is completed, we now occupy it, and it is quite important for our peace of mind to realize on this small remnant of our bonds to meet building obligations. We are sure it will be done quickly when our friends realize the need.

Ho! Ye Eleventh Hour Friends

Various friends in the profession assured us if we really come to need at the end of our building transaction they would be glad to jump in and buy a few bonds to help put it over with a fine finish.

That hour has come!

This is notice that we are facing a real pinch for this additional margin of funds, and we hope such friends as have thus planned will now help us make a good finish. It it now or never if we are to receive their aid.

Immediate closing of the flotation is necessary.

To Our Present Bond Holders

We invite any of our present bond holders who have additional funds to invest to increase their holdings in BBB's. It would enable us to close our bond subscription books before the end of this month if a small percentage of these friends would take an additional bond or two apiece. Can't you do that, friend? We are sure you will, if you possibly can. Remember every hundred dollars helps.

We Congratulate BBB Owners

You would have to search far to find a safer or better-paying security. “Seven per cent with safety and sound sleep” is a wise buy for the osteopathic investor. Better put your money in this form of investment where you can not lose it and be satisfied earning 7 per cent than risk it all in oil or mines or other luring speculations where in the nature of things you don't have half a chance to come out without losing your principal. Perhaps it doesn't look so big in “promises”-but ninety-nine times in a hundred it pays you bigger profits in the end. Many know by experience!

Besides, your savings invested in Bunting Building Bonds will work two ways for you at the same time—your money makes 7 per cent with safety and aids materially to advance osteopathy’s national campaign of advertising. Thus in the end investment in Bunting Building Bonds will pay you much more actual profit than a 10 per cent listed stock or bond that does nothing to promote your professional welfare on the side.

To Our Installment Bond Buyers

Our bond buyers who have purchased on the installment plan are urged to meet their payments promptly as scheduled. Any who are able to pay for their bonds earlier than they promised will confer a real favor upon us if they do.

We hope this will be the last call we shall have to make to complete our bond subscriptions. We ought to be able to say, rather, that the issue had been generously over-subscribed. Will you help us now at the finish?

Yours with appreciation,

The Delaware Springs Sanitarium, a Wonderful Osteopathic Institution

The development of the Delaware Springs Sanitarium is an interesting bit of history in Osteopathic progress. From a small beginning in a remodeled residence the work has grown into the structures shown in the above illustration.

In the summer of 1913 Dr. L. A. Bunstead, ASO '06, of Delaware, Ohio, conceived the idea of building an Osteopathic Sanitarium and Hospital upon a beautiful site which had previously been improved by a group of medical men. For fourteen years different attempts had been made towards erecting a sanitarium by the medical men in Delaware but each time failure resulted.

After acquiring title to the twenty-four acre tract, Dr. Bunstead re-organized the existing stock company and with a new board of directors consisting of laymen interested in Osteopathy and the town, a successful campaign was started resulting in the erection of a splendid sanitarium building housing thirty patients.

The interest of Ohio Osteopaths was easily aroused. Delaware had special advantages for the location of an institution designed to serve the entire state. Geographically in the center of the state, with railroad connections in every direction, with abundant mineral water having an established reputation among the laity, a college town with a population in sympathy with all uplifting efforts—Delaware was thought to be an ideal place for a sanitarium.

In the spring of 1914 the organization was joined by Dr. J. H. Long, ASO '06, who had just finished his medical course in Harvard Medical school. Dr. Long brought the professional work of the sanitarium up to the highest level, being an unusually keen diagnostician and skilful surgeon. Under Dr. Long's guidance, a training school for nurses was started which was later chartered by the state medical board and which has the unique distinction of being the only registered sanitarium training school in the State of Ohio.

Dr. L. A. Bunstead.

Dr. J. H. Long.

When You Play Safe

So long as you “Find It, Fix It and Leave It Alone,” it matters not if man-made law is violated. But it must be in accord with common sense, humanitarian principles and conform to the law of God.—C. E. McNaught, D.O., St. James, Mo.

Leucorrhea of Gonorrheal Origin

This condition when due to endocarditis of gonorrheal origin can be treated successfully by heat using from three to five cauteries, as high as the heat kills the immediate infection and penetrates the uterine cervical glands sufficiently to destroy all gonococci, because the heat cannot resist a temperature over 104 degrees.

[Continuation of Department on Page 23]
"The Genie in the Bottle"

In every bottle of Dioxogen there is a great and powerful genie—a kind and beneficent giant—Pure Oxygen. Mighty and strong as a "killer of germs" and "destroyer of things unclean and impure", this genie, Oxygen, like its brother, Sunlight, though a deadly foe to dirt and disease, is a good and gentle friend to healthy cells and tissues.

Making available at all times the services of this beneficent giant,

Dioxogen

duplicates Nature's methods as no other antiseptic does, since it exerts at one and the same time, potent germicidal action with pronounced stimulation of the processes of healing and repair.

Thus, in the doctor's office, the hospital and dispensary, the factory and school clinic, in the home—indeed, wherever germs must be fought and cleanly conditions established, Dioxogen meets the constant need for a potent but safe and harmless antiseptic, as no other equally effective germ-destroyer ever has.

Many a busy doctor has learned that the genie Dioxogen places at his command, is an ally that never fails him in the daily conflict with the greatest of all enemies to mankind—the germs of infection and disease.

The Oakland Chemical Co.
59 Fourth Ave. New York City

Wonderful Year for the Laughlin Hospital, Kirksville

Our first year reveals a very proud record for this new institution. Over 900 surgical cases were handled, just as they came, with a mortality of but three in that number. Receipts for the year were over $105,000—practically all of it Dr. Geo. M. Laughlin's work.

Our institution is entirely out of debt and paid for from the receipts of our practice. It is one of the best equipped small hospitals in the state. We maintain a fine home adjoining for nurses. We are prepared to handle successfully all classes of surgical cases and invite the co-operation of osteopaths.

For further information address Dr. George M. Laughlin, Kirksville, Mo.
THE OSTEOPATHIC PHYSICIAN

First Annual Meeting of the Eastern Osteopathic Association

The annual meeting was held at the Pennsylvania Hotel, New York City, Friday and Saturday, April 29th and 30th. Was it a success? Well, ask any of the 328 live-wires who were there. From 9:15 Friday morning until quitting time (daylight-saving) Saturday there was not a dull moment.

From the viewpoint of osteopathic enthusiasm, attendance, sociability, quality of scientific program, brilliancy of after-dinner-speakers, efficiency of management it will long be remembered as one of the high lights in convention history.

The only expense incurred by the New York committee was for moving pictures, and yet they say New York is an expensive luxury. As "Dickery Doc" says, "Even if it were really dry, there is no place like New York".

Much of the financial success was due to the willingness of all of those who took part in the program to pay their own expenses. Dr. Geo. V. Webster, Dr. Geo. Still of Kirkville, Dr. R. Kendrick Smith and Dr. John A. McDonald of Boston, are to be especially commended for their generosity. Simplic, isn't it?

The organization is to be managed by an Executive Committee of six members, elected by the members, and this committee is to elect its own officers, Simple, isn't it?

The following officers were elected for the coming year:

Dr. H. V. Hillman, president, New York City
Dr. J. S. Loague, first vice-president, Atlantic City, N. J.
Dr. Arthur Patterson, second vice-president, Wilmington, Del.; Dr. Chas. Zeigler, third vice-president, Trenton, N. J.; Dr. Francis Jennings Smith, secretary, Philadelphia, Pa.; Dr. Harrison McMains, treasurer, Baltimore, Maryland.

It is the intention of the committee to develop the Circuit Clinic idea that has been so successfully established on the Pacific Coast and Atlantic City was chosen for the next convention city. The pity of it is that we must wait a whole year for the next gathering!

It has been estimated that the State organizations interested hold their annual meetings jointly with the Eastern Osteopathic Society. The idea being to set aside several days for the separate business meetings and combine on the general program and banquet. This will be taken up by the State organization during the year, and the advisability of the plan decided upon.

PROGRAMME: FRIDAY

3:30 "Nephritis"—Dr. Henry A. McMains, D.O., Baltimore, Md.
4:00 "Hiccoughs"—Dr. Charles Hazzard, D.D., New York City.
4:30 "Danger of Avocation"—Dr. John B. Buehler, D.O., New York City.

7:00 Banquet.

SATURDAY

9:15 "Diagnosis and Treatment of Syphilis"—a motion picture.
10:00 "Syphilis"—Dr. Frank J. Stewart, D.O., Chicago, Ill.
11:45 Business Session.
12:15 "Technique"—E. W. Cleveland, D.O., Binghamton, N. Y.
1:15 "Rheumatism"—H. F. Underwood, D.O., Brooklyn, N. Y.
1:30 "Best Technique and Treatment"—Clinton Achoron, D.O., New York City.
2:00 Ear, Nose and Throat.
2:45 "Acute Infections", round table discussion.

PROGRAMME: SATURDAY

9:15 "The Gift of Life"—a motion picture.
10:30 "Cervical Region"—Dr. Frank J. Steward, D.O., Chicago, Ill.
11:00 "Cardiac Diseases, an Osteopathic Application"—Dr. George H. Carpenter, D.O., Kirkville, Mo.
11:30 Business Session.
12:00 "Technique. Cardiac Diseases"—Dr. G. H. Carpenter, D.O., Chicago, Ill.
2:00 "Post-Prandial"—Dr. Geo. V. Webster, D.O., Kirkville, Mo.
2:30 "Medicine of Human Nutrition"—Dr. Geo. V. Webster, D.O., Kirkville, Mo.
3:10 "Colonics Irrigation"—Dr. Catherine Nablo, R. N., New York City.

Convulsions in Pregnancy

Convulsions in pregnancy as I have experienced them and how to handle them: First, relax the patient all along the spine between convulsions. Then have the patient drink at least a cup of salt water, if conscious; if not, use a stomach pump and wash the stomach with a good salt solution and leave a pint or so in the stomach. Then wash the bowels out with the same while patient lies on a bed pan. Shake up liver and spleen; then let the patient all along the spine between convulsions.

The intelligent and thoughtful physician will be able to give the patient a very good tonic to take after the recovery from the convulsion.

The knowledge of the best name, and he earned it.

The only expense incurred by the New York committee was for moving pictures, which plate for you.

Are You Protected by Central's Accident and Health Policy?

When you buy insurance, buy the best that can be had.

Central's Accident and Health Policy pays $800 for accidental death. It pays $25 a week for total disability from either accident or sickness. The cost to you is only $40 annually or $10 quarterly.

Now, doctor, you cannot afford to be without this protection. Our company pays promptly and without red tape. Drop us a line and we will be pleased to give you further details about Central's policy.

Little Stories of the Clinic

By C. W. Young, D.O., Grand Junction, Colo.

Friday evening, February 15th, while watching a basket ball game played by high school girls in a crowded Y. M. C. A. gymnasium, I heard one of the players give a little scream and saw her fall limp on the floor. She was sent immediately to my office Wednesday, but she did not come until Friday afternoon. She told me that she had sprained the same ankle several years before. I secured a pan of hot water, in which she soaked her ankle for an hour, after which I gave her a very gentle treatment. I found the portion below the external malleolus very much swollen and only slight efforts to replace. After the treatment I put on adhesive tape, extending from the lower third of the leg on to the foot. In order that the ankle might certainly be held in this position until she reached her home, I put a roller bandage over the tape, with instructions to remove bandage and tape in case she suffered any pain, and soak again in hot water. I also told her to secure a pair of crutches and refrain from bearing her weight on the ankle for several days. On the following Sunday I visited her home and she reported that the ankle began to pain considerably soon after her retirement, so she removed the crutches and tape and soaked it in hot water for three hours, when she became fairly comfortable. I found the ankle still badly swollen, and the entire foot turned inward. I used the technique illustrated by Figure 1, p. 368, A.O.A. Journal, June, 1920. That is with the thumb on the upper edge of the inner side of the astragalus, I pushed vigorously against the astragalus as with the other hand I drew the foot outward. I requested her to come to my office Wednesday, but she did not come until Friday afternoon. She said she had been walking without her crutches for three days; that her ankle had caused her no pain and felt fine, until the day before when she had hurt it again by an injudicious movement. The swelling had mostly disappeared, and I gave another treatment, and told her that of Sunday, followed by application of adhesive tape. That same Friday evening she played in a strenuous game of basketball, but with very little discomfort, and on the following week participated in a series of games that made her team the champion of Colorado. I admit there are all grades as to severity of sprains, and I am fully satisfied that this case was of a serious character, and that nowhere near such gratifying results could have been secured had we not adjusted a bony lesion.

AOA Convention--Cleveland July 25-29th--Let's Go!

The complete program will be published in the June and July magazines, but I want to at this time tell you of some of the things that are in store for those who attend Cleveland. Cleveland the city needs no introduction. Situated as it is on Lake Eric, easy of access by great trans-continental and trans-Armadillo, as well as by boat, it is ideally situated.

Hotel Statler. The Convention hotel is one of the several in Cleveland, operated by the Statler Company, and the name alone assures us of all that is best in hotel accommodations. There are other hotels more, should one not care to stay at the Statler. There is no one particular to stay away for fear of not getting accommodations to suit their individual tastes and pocketbooks. Cleveland, it appears, has the roads are once more on a competitive basis, assuring good service.

Program proper starts at 10:00 A. M. Monday, July 25th, when Cleveland will welcome us. Immediately afterwards the president, Waldo, will talk to you. His remarks will be plain and easily understood. Following we will hold a Memorial to Dr. A. T. Still.

The following program officials assure us of the best to be had in all departments.

General Chairman--Jennie A. Riel, D. O., Haskell, N. J. Vice-Chairmen--R. C. McCaw, Edith Ashmore, Evelyn Bush, and many others will show you how to "find it and fix it." Those who do not want to attend are looking for excuses right now. One excuse is as good as another, but remember "To him that hath shall be added, and to him that hath not, shall be taken away, even that which he hath." which interpreting means that those who sacrifice the most, shall get the most out of the Convention. Come, let us make this Convention the biggest and best!

Hank Perkins He sez:
"By Heck, Do You Know--RILEY REZZ IDEW WENT TO SEE "THAT THERE OST'PATH BOUT THE RHEUMATIZM IN HIS LEG AN' WHEN HE TOOK OFF HIS SOCK HE FOUND HE HAD WASHED THE WRONG LEG"

Experimental reasoning extends science but cannot create it.---Federigo Enriques.

Dr. Palmer In Films

Dr. B. J. Palmer, head of The Palmer School of Chiropractic, greeted thousands of his fellow-townsmen in the movies at the capital theater of the city. The only way we are to maintain our lead in this direction is by greatly multiplied efforts. Some day, somebody is going to write entertainingly of the benefits of medical treatment and such writing is going to get directly into the hands of the people it is meant for, Osteopathy now has the good-will of a great many people. From now on, that will become less and less of an asset unless it is highly cultivated.---J. A. Van Brakle, D. O., Portland, Oregon.

Professional Publicity

In my opinion professional publicity of all sorts will undergo tremendous development during the next few years. Your organization in the forefront of this movement and one of the things you can preach to the osteopathic profession is that the medical profession is rapidly going to take up educational propaganda and that the only way we are to maintain our lead in this direction is by greatly multiplied efforts. Some day, somebody is going to write entertainingly of the benefits of medical treatment and such writing is going to get directly into the hands of the people it is meant for, Osteopathy now has the good-will of a great many people. From now on, that will become less and less of an asset unless it is highly cultivated.---J. A. Van Brakle, D. O., Portland, Oregon.

STILL-HILDRETH OSTEOPATHIC SANATORIUM
MACON, MISSOURI
The pioneer Osteopathic Institution of its kind on earth created for the sole purpose of treating mental and nervous diseases, an institution that has already proven the value of osteopathic treatment for insanity. Write for Information

Charity Patients
Nine-tenths of our charity patients have been a disappointment to us and probably that is the common experience of osteopaths. I believe that is because people care less of a thing in proportion to the effort they have to make to get it. Treatment comes easily to them and as a rule they value it lightly. They simply will not follow instructions and live up to what is laid out for them to do like those who are paying for treatment just what it is worth. They do not make the progress of regular patients, therefore, they are not as appreciative and enthusiastic; and they do not do the same credit to their doctors as regular pay patients.

It has been our experience, too, that we often imagine the lot of our charity cases is much harder in life than it is. Not infrequently we have worried along several months treating such a case, feeling sorry for the supposed misfortunes that have beset him, until we learned that he had taken $50.00 over and paid it to a "stomach specialist" (or some other such specialist) to tell him whether we were treating him right or not!

I remember one case of a boy with spinal trouble whom we carried along for about three years. The mother had been referred to us by the Sisters of Mercy of Something or Other, and she would put on poor clothes when she came to see us. There was never a time in three years that I treated her boy that I did not forego the opportunity to treat a pay patient in the same time I gave up to him. Yet I found out the parents were really well off and owned three apartment buildings. Such experiences make one more careful in dispensing charities.

By Getting Injured Men Back on Job
As every little bit of recognition helps it might be of interest to advise you that I have been appointed as one of eight physicians by the London Guarantee and Accident Co. to take care of accidents and injuries of employees of two coal mines here employing 1,200 men on which this company carries insurance. I might also state we have twenty M. D.'s in practice here. This recognition has been gained by getting a number of injured men back on the job in much less time than the other fellow.-W. D. Wood, D. O., Centralia, Illinois.

Avoiding an Operation
A young man came to me having trouble with his throat. It seems he had eaten a few dried juniper berries and a hull had become lodged in his throat. For a week he had tried washing it out, also eating rough dry bread, but to no avail. I think the small half shell exerted a suction on the soft membranous tissues of the throat. However, he was thinking seriously of having a minor operation performed, as it was very annoying and irritating when the idea occurred to me that if a green persimmon part was taken into the throat, it would tend to "bulker" (so to speak) the throat tissue and relieve the suction of the shell and it could then be readily dislodged by drinking a fluid. We decided to try the persimmon idea and it proved a success and very much more desirable to the patient than the knife of the surgeon. I am sure he has avoided any mutilation whatsoever and was absolutely void of any after bad effects.-Sarah Savely Kanzmeier, D. O., Los Angeles, Calif.

Don't Wear George Out!
The osteopathic profession as a whole is longing and looking for a brighter day for osteopathy. That day is coming, but will arrive sooner if each member will be willing to do his part and not content himself by thinking "Let George do it." It is a good thing there are a few "Georges," but why not every one put his, or her shoulder to the wheel and help? Then, when some good has been accomplished, such as getting a model bill through the legislature, each doctor can feel that he had a hand in the good work.-Florence Morris, D. O., Des Moines, Iowa.

Why Iowa Won
Three Reasons:
1. Conducted on a business-like plan.
2. Unity of purpose.
3. Co-operation.

Iowa has been trying for the past ten years to get a new Osteopathic law on its statute books but failed at each Legislative session. After some consultation it was decided that we were losing because we had not followed any definite plan and therefore we had no co-operation. Immediately we set about to conduct our state activities in a business-like manner.

The need of a new law seemed to be the unanimous opinion of the profession of Iowa and we set about to find the law to best suit our needs. This being their wish they gave the lead to the committee and the officers ordered to get it with assurance that they were back of us to the man. This was the kind of spirit we needed (co-operation). We did go after it, and we got it.

Let me say that the osteopaths of any state, if organized on a business-like plan, having unity of purpose, co-operation and demands fair and just, can go before any fair-minded legislature and "put it over."-H. J. Marshall, D. O., President, Iowa Osteopathic Association.

Not "How Long" But "How"
The osteopathic profession as a whole is longing and looking for a brighter day for osteopathy. That day is coming, but will arrive sooner if each member will be willing to do his part and not content himself by thinking "Let George do it." It is a good thing there are a few "Georges," but why not every one put his, or her shoulder to the wheel and help? Then, when some good has been accomplished, such as getting a model bill through the legislature, each doctor can feel that he had a hand in the good work.-Florence Morris, D. O., Des Moines, Iowa.

My one best thought for the profession, as I feel it, may be considered in the light of a "knock" by some of the D. O.'s. Too much "general treatment" and not enough thorough examination and specific treatment. "How long do you treat?" is a common question that I have to answer. Would that we could get away from the massage idea.-E. Claude Smith, D. O., Topeka, Kansas.
The American School of Osteopathy

After nearly thirty years of successful operation, is enabled to offer to prospective students the advantages of

The Largest College and Hospital Buildings
The Best Equipped Laboratories
A Faculty of Specialists

Students of the American School of Osteopathy are in charge of experienced physicians and teachers, who devote their entire time to the school work.

Next Class Will Open Monday, September 12, 1921

Kirksville, Missouri
Why Not Let Down Our Fences?

In the past few months all of us have been receiving literature from B. J. pleading with us to take a course in Osteopathy. Why not copy this idea and fill our colleges from the Chiros? The AOA should go on record at our coming meeting as recognizing those colleges that give one-year's credit to graduate Chiros who are reputable and have the necessary preliminary education. With the necessary advertising it will put 1,000 of them in our colleges next fall. Not more than one of them out of every twenty-five will ever mention his Chiros degree after he gets the D.O.

Some will say that this is letting down the fence. I say that it is better to let it down in one place than to have the whole thing torn down by the increase in number of chiros on the outside.

This may work a hardship on our colleges but they could arrange a special schedule.

G. A. Bredfute, D.O., Curatorsville, Mo.

Some Fun with Cooper County, Missouri's Most Popular Surgeon

On Saturday, December 18, 1920, I answered an emergency call to go three miles east to attend a man who had fallen from a load of fodder. He took a "somsenault" tumble and struck largely upon his right shoulder. I found the arm broken and he was not suffering a great deal so without bandaging I gave relaxing treatment and told him to call me if he should experience any worse suffering. At 11 o'clock, a.m. Sunday, his family began calling for me. I was out south of town then and by the time I returned they had gotten impatient and called for a surgeon, (the most popular in the county). He, seeing some bloating from flatulency, took the pulse and then called the wife into another room and said: "I have bad news for you; Mr. V. has torn an "entral "loose in his belly and must be taken to the hospital. I will go and make arrangements and send the ambulance for him. His condition may be serious soon".

Within fifteen minutes after he had left I arrived and told patient I could give enema and cure the "torn entral". First, I bandaged his hip, then soon had him relieved. He got on his feet in five days. There were fifteen or twenty neighbors there when I gave the enemas and relieved the man and saved him a big hospital bill. One of the neighbors telephoned and countermanded the order for the ambulance. The fun came in when the bunch of neighbors and friends saw how I whipped out the popular, wonderful surgeon.—J. A. Barnett, D.O., Boonville, Missouri.

A Land of Promise

Osteopathy has received a great boom in Oklahoma. A great future lies open to the profession. Let us continue to uphold the scientific facts of the founders, Metchnikoff, Bordet, Ehrlich and Wright. Let us remember that osteopathy and osteopathic theory of disease has been the only science that has stood the storms of the past 20 years.—C. D. Heaslet, D.O., Tulsa, Oklahoma.

Calomel

I wish one of our college men would explain the action of calomel on human tissue. Some of the best medical schools teach that it has no action on the liver; still some people take calomel all the time and claim that the druz has saved their life.—Albert C. H. Easer, D.O., Chicago, Ill.

Apathy, Avault!

Apathy is the chronic state of things today. What is the remedy? Back to first principles.—J. W. Phelps, D.O., Atlanta, Ga.
Nujol has unequalled advantages

The makers of Nujol have unsurpassed facilities for the production of liquid petrolatum of absolute purity, correct viscosity and high, uniform quality.

The manufacturers of Nujol have world-wide resources.

Only the finest raw materials are used in the manufacture of Nujol.

Nujol owners operate the largest merchant fleet flying the American flag.

Research and testing laboratory.

Nujol is bottled in a clean, light, airy laboratory.

The Saybolt Viscosimeter for testing viscosity of petrolatum liquidum was invented by Dr. Geo. M. Saybolt, for many years head chemist of the Standard Oil Co. (New Jersey).

Nujol Laboratories, Standard Oil Co. (New Jersey), Room 751, 44 Beaver St., New York.

Address: __________________________
As a Man Giveth, He Geteth

All my thoughts regarding osteopathy are "best." Am continually surprised at achievements obtained thereby. Dietetics should receive more attention, it seems to me, in our colleges. "As a man thinketh so is he." So also as a man eats, he thinketh.—A. J. Phillips, D.O., Los Angeles, California.

My Diagnosis

The osteopaths are a selfish lot; too much cute for personal gain; piling up the dollars. That's right—keep "Bunting" in the background! P. S. In return, couldn't you send a year's subscription without charge?—Wm. F. Dickey, D.O., Santa Cruz, California.

258% Gain

KANSAS CITY COLLEGE OF OSTEOPATHY and SURGERY

had the above student gain for 1920-1921. Nearly tripled its enrollment and now starting for a more remarkable record for 1921-1922.

It's "The Aggressive College"

2105 Independence Avenue
Kansas City, Missouri

We accept all kinds of hospital cases, except Communicable and Mental Diseases. A purely Osteopathic Institution. Chartered on a non-profit basis. Modern equipment in all departments.

Our Training School for Nurses is accredited by the State Nursing Board. Professional training given in all branches of nursing.

Should Not Oppose Surgery Where Really Indicated

On the third of March I underwent an operation for chronic appendicitis which had bothered me for several years. I have been much benefited and now believe and feel as if I shall have perfect health. I wish to urge all osteopaths not to stand out too strongly against surgery. Cases that do yield—and the most of them will yield—to osteopathic treatment should be held, but those that continually recur should have the advantage of surgery before they are worn out and full of toxins. The O.P.'s slogan "Osteopathy stands for the Truth Wherever Proven" is and ever shall be my stand—W. B. Farris, D.O., Fort Smith, Ark.

Why Mary Elizabeth Went Medical

In the January issue of the Southwestern Osteopathic Sanitarium Bulletin on page 19, the following statement appears: "One of our Osteopathic hospitals recently was compelled, because of pressure of medical men, and lack of support of the osteopathic profession, to close its doors to osteopathic physicians and become a regular medical hospital." I infer that the historical question is the Mary Elizabeth Hospital of Raleigh, N. C. If this be true the statement is misleading. Dr. Glascock and I owned this Hospital privately, and there was no pressure during the last three years that we did not have patients on the waiting list. It was making money and therefore was no pressure from outside sources or from lack of support to cause it to go into medical ranks. Dr. Glascock, wanting to specialize in surgery, felt that he would have greater opportunity by joining the medical fraternity's practicing surgery. Therefore he associated with him two medical men and bought out my share.—A. E. Tucker, D.O., Raleigh, N. C.

Put It Into the Movies

Regarding the advancement of osteopathy by motion pictures: Let us put some of this fare of publicity across the country. Twenty thousand dollars will put a scene, sketch or osteopathic surgery in a good, big production. Let us get together and see what we can do with some of the big companies such as Famous Players, Paramount and Metro regarding the injection of osteopathy. I'll be one of a thousand osteopaths to devote 10 or 20 dollars to this purpose. Don't let the chiros beat us to this.—Nathaniel W. Boyd, D.O., Germantown, Philadelphia, Pa.

Not Down, but Up

O.P. shop talk is great stuff—good, bad and indifferent; so here goes for another spurt seeking classification. Relative to chiros: To allopath, with all his wisdom, once had charge of all the healing business. His methods of practices failed and he lost his monopoly. To is losing out—prestige, practice and money, because his patients are seeking other kinds of practitioners where results are better. But the allopathic doctor been able to produce his results he was taught to believe he can produce, no other system would have been needed, nor any laws to protect his erstwhile monopoly required.

Then comes the osteopathic physician. His system is real and effective. But it requires brains, brawn and training, with much practice to get all the potential possibilities latent in the science. Too many practitioners lack these requisites and they sink to the level of crass imitators, erstwhile known as chiros.

Now to unite with these lesser lights is a lower A. T. Still Ideals. Better far develop osteopathy and get above need for warfare against threatened extinction.

If any state or province has therein the score real trained, dyed-in-the-wood osteopathic practitioners, that state need fear no alchemical machinations. The sovereignty of the state is still A.D. 1921, vested in the people, and to people do rule. And the people will brook interference with any beneficent science, thus efficiently demonstrated. Thus let us vie for results and have less concern than in number we treat in one day, the size of the fee, and the amount we can make in a year to dazzle the more common herd with a sense of our greatness. Real greatness in osteopathy not measured in gold or cros but in results in healing the sick. The people will view us as great or little, not by the splendor of our equipment, but by the contribution we make to the community we have chosen to call our home with our presence. As the throne forget them forsooth and rise higher!—K. D. Heiat, D.O.—Kitcheener, Ontario.
IF
experience means anything in the training of the successful osteopath

THEN
the "Los Angeles College" should appeal

To the prospective student of Osteopathy,
To the practicing osteopath who is seeking an institution in which to take post-graduate work.

During April the students of the two upper classes of this College

TREATED in the busy college clinic 2609 cases;
WERE PRESENT at the examination of 350 clinic patients;
ASSISTED in the care of 34 cases in the City of Los Angeles Obstetrical service.
RENDERED first aid in 300 cases in connection with the City Emergency Hospital;
OBSERVED operations at 40 major surgical cases at the County Hospital.

Such experience coupled with the course of instruction offered by this institution is sure to go a long way towards the making of a successful osteopath. Address—

OUR MAIL ADDRESS IS NOW
WAUKEGAN, ILL.

Our new postoffice address is Waukegan, Ill.
Please so address all communications to us.

No longer have we moved from the old building to the
our new building is right across the street from the
postoffice. They know us. We call for our
delivery of the papers several times a day between deliveries.

We have not yet instilled heavy machinery
for printing our publications, and until that is
accomplished—it is a $2,500 undertaking—we
shall continue to print our journals and mag­
nazines in Chicago. Those having second class
postage entry must continue to bear the Chi­

ago address as long as they are mailed in
Chicago. They will not substitute Waukegan
for Chicago as the publication office until they are actually printed and mailed in Wau­
kegan.

Therefore do not be confused by these two
addresses.

Send our mail to Waukegan. Come and
visit us and the new plant in Waukegan. It is
but forty miles and just an hour's run by Chi­

cago & Northwestern Railway from Madison
street.

DEMACRATIZING THE "OP"

For the past year we have been laboring
fervently to bring about the complete democra­
tization of The OP's editorial conduct and editorial
policy. This means making it the mouthpiece
for all the thinking in the profession. In times past we have often been criticized (and with some justice, we think)
for making The OP's editorial contents reflect too
often the personal visions and views of Bunting.
Everybody who takes part in mak­
ing the wheels go round naturally wants at
some time or other to state his views of our
science and practice and of our professional
affairs. And, furthermore, we all like to know
the other fellow's opinions, too, whether or not
we agree with him or not.

So we got the vision, after discussing the
matter patiently with various leaders of the
profession, of making The OP become the
democratic mouthpiece of the profession. The
AOA Journal naturally gets and prints most of the
scientific contributions of the pro­
fession. The Western Osteopath as organ of the
whole wide Western Osteopathic Associa­
tion is also primarily scientific and is giving
the AOA Journal a good race for excellence of
contents. Each of the other journals, it seems to us,
has reached a high plane of excellence and is developing its own special activities and
interests.

We prettied some scientific articles of ex­
ceptional merit. The OP has never wished or
tried to specialize in that field or to compete
with these two mainly scientific publications. It has seen we could not give the line of publishing a career that our course of usefulness lay along somewhat different lines. We have frankly said that in planning the economic aspects of practice—to helping osteo­
paths "sell" osteopathy to the public and to
their patients, rather than "selling" them the
treatment they are giving their patients. We
are willing in the main to leave that work to
our colleges, associations and association jour­
nals.

It seems only right and in the interests of
the common good for our journals to observe
a certain degree of consistency of interests covered. So we have actually done this from the start, twenty years ago, but the
one place where we have probably failed to live
up to our fullest opportunity, was—as we admit
now, in maturity, we are frank to say, our
own. Our present attempt to improve matters
is truly an effort to come nearer to meeting the
fellow. Hence this evolution of The OP
toward true democratic editorial fellowship
corresponds in a way to the natural ripening
and growth and development of individual human life. It is a rounding out from riper experience. The new phase is a natural one into which we pass with entire
willingness and comfortableness because it
seems more desirable and best to us as well
as to the profession at large. The change of
policy is not therefore in the nature of repres­
sion that has been forced upon us but rather a
privilege into which we have grown by ma­
turity and best understanding opportunity—a
part of which is getting a staff behind us that is will­ing
and able to help carry the burden.

The OP stands today, then, as the Open Court
of the Whole Profession into which every man
and woman in the work may bring his or her
thoughts and feelings and beauty from having this ever-ready Open
Forum where the Whole Profession sits to
beauty from having this ever-ready Open
Court expression by the Whole Pro­
ession. The full "Committee of 500" is not yet
quite complete, but 500 invitations have been
extended to serve and over 400 acceptances
have been received of that number. Additional
invitations will go out as referrals to serve are
received, so in a short time it is sure the entire
500 Associate Editors will be on the job. Those
of you who have not written in the past are invited to volunteer if a formal request for service has
not reached you from us.

You may therefore expect to see The OP con­
taining more than ever, and in all interests that help the osteopath to build and conduct practice and "sell" osteopathy to the public and patients—sprinkling of lighter scientific stuff, and on
top of this to develop interest on all important
issues in its "Shop Talk" pages by a generous
outpouring of the views and spirit of the pro­
ession. Now, why shouldn't The OP be rep­
sentative of the best views of the whole pro­
dession? Honest, proper, and representative
views are the wish and woman in our ranks is an assistant editor
and writes for its pages.

Tell us if you like the change, and pray feel
free to suggest how we may further improve the service of purveying news and opinion to our profession.—HSB.

SPEENCE OF HARTFORD

Dr. Philip S. Spence of Hartford, Conn., is entitled
to a vote of confidence and thanks by the
profession at large for the organized pub­
licity he has set in motion to fight allegations
in congress. The personal work he has done to amend the Fess-Capper bill and to
repudiate osteopathy and place reliance
in its original form is simply tremendous. The
profession is lucky to have a leader of such
vision, initiative and punch.

MORE POWER FOR AND FROM OUR
OSTEOPATHIC SPECIALISTS

One reason why a lot of people haven't more
close in osteopathy is they think that there
is no service of specialist back of our
profession, and likewise no hospitals and san­
atoria. They often believe in osteopathy for
chronic ills, so long as folk are able to go
the osteopath's office for treatment; but they
harbor fear that if they have to go to the
osteopath's office again upon the supposedly "higher-ground" pro­
fession which boasts such facilities in
institutions and to medical specialists because of the
respectability. They think further that if they require to enroll
a sanatorium or hospital for attention they
must repudiate osteopathy and place reliance again upon the supposedly "higher-ground" pro­
fiession which boasts such facilities in
institutions and to medical specialists because of the
respectability.

What to do about this result?

You know.

Our dignity and prestige as a profession suf­
fers, if we allow ourselves to come over whole­
heartedly as osteopathic converts do not do so.
We lose patients daily to medical institu­
tions and to medical specialists because of the
respectability.

How combat this misunderstanding?

Educate! Find out into the people until they
understand that our profession does have the support of its own specially trained corps of surgeons and specialists, and that we have numerous well equipped hospitals and sanatoria; and that our institutions and specialists both are increas­
ing in number rapidly.

Let them have a good understanding of this
and it will increase prestige and make prac­
tice for the osteopathic general practitioner. It will strengthen him before those people in a
measurably. He will seem so much safer as a
physician and adviser if they but realize he has
the competent surgical and specialty advice and
help available that he could have this once
was his or own profession whenever he comes home to face
with need of such assistance.

Recognizing this need, the whole profes­
sion, general practitioner and osteopathic spe­
cialist alike, we have had prepared, by a
group of our most competent people, a new
document of "Osteopathic Health" which will change this notion among every household in
the country. It is entitled "The Osteopathic
Specialist in Disease of the Ear, Nose, Throat
and Eye."
Back a little in my memory is the picture of an office in which I would not mind waiting all day for the doctor to appear. This office is lined with books and I am a lover of books, good, bad and indifferent.

On the day I called on the owner of this particular office, he happened to be busy and so I browsed around in his library which extended clear out into the reception room. To my great joy, books treating of unknown side by side with professional classics of wide renown. Many of my college day favorites were there and there was an Index of Differential Diagnosis, a work of W. B. Saunders Co., by which I inferred from my own experience that the good doctor bought some of his books on the installment plan.

There were pictures on the wall. George Still cheerfully salvaging somebody's appendix, George Laughlin reducing a congenital dislocation of the hip, and in one corner, one of Vardon just about to kiss a green golf ball.

Inside, I found a man overshadowed by his books. One of these fat, old-fashioned dictionaries rested calmly on its stand by the reception room. A book-rack on his desk supported an Index of Differential Diagnosis, and Dislocations reviewed for what he had said. I thereupon admitted that in my practise such things rarely occurred, which led him to remark that so far he had never had such a case but in the meantime he wasn't going to worry over what he would do to one if ever called in.

He showed me that Caesarian section would rapidly supersede all other methods for the extraction of new-born infants. The only opposition I could muster up against his multiplied references was the hazardous opinion that people for a long time to come would prefer to call the obstetrician with his fee of 25 to 50 dollars as against the surgeon and his retainer of say $250.00. I asked him what he would do for a case of gall-stone colic and received in return a lecture on the beneficence of morphine. A query as to how he set up acute-kidney lesions brought down from a shelf an avalanche of Journals of the A.O.A. neatly marked at the places where Fryette so engagingly discusses on the subject. Just about then, that picture of Vardon’s came up for notice and the office was closed for the afternoon as we hastened out on our golf links.

He played golf just as he practised Osteopathy. He quoted authorities for every move in the game. Every move was his own poor move, especially just before he hit the ball, and he turned in a rotten score. We had a nice time and if ever I am by the way again, I shall make time for a look at the books and perhaps a round of golf, but if I should happen to have a pain in my side, I carry it on to the next town for I never yet saw the book or series of books that could give much of a treatment of a condition.

I’ve heard of men who held pennies up to their eyes and shut out the vision of dollars. This man looks into books and cannot see the needs of his patients.

Authorities, like precedents, are fine things for lawyers at all times and for doctors when they get in a hole; but otherwise they don’t seem to serve their purpose.

Some Doctors’ Offices v. Authorities

Backward, Not Forward

The “Forward” or “Backward” issue can’t be done in twenty words. If we are spinal specialists don’t call ourselves Osteopaths. No man can say all drugs are useless. If a member of one of our good osteopathic families comes to us to get his osteopathic passport, we either send him to an M.D. telling him we don’t use drugs, (common sense should tell us we can’t treat diptheria by adjusting the spine), or we refer him to the osteopathic specialist. Another member of the family may come with a case of scarlet fever, “Oh, no, we don’t take contagious cases—we never studied that stuff in college.”

A third member of the family is nearing motherhood and wants you to deliver her baby. She is as much as she can be told, as much as refer her to an Osteopath who is doing obstetrics, the family become disgusted and say “Oh, well, he is only a spinal specialist.” They tell a few of their friends. In due time the little story gets to a member of the legislature, he happens to be on the committee on medicine, a new bill comes up for consideration before that committee. “Well, he says, they don’t need a law like that—they are only spinal specialists, the Drugless Healers already have one and the bill is thrown in the scrap heap.

As an energetic young college man comes along thinking what he would like to do for his life work; he has a happy thought and thinks the most promising thing for a young man is the Osteopathic profession; he gets a catalog; finds that the institution can even give him a loan so that it will take four years to complete the course. He next looks up the law and finds he will only be able to practice 1/10 of what he gets in college; he decides he wants to be a physician and not a spinal specialist!

Two men and two women every day like that. Whose fault is it—the Legislature’s? No, the fault of ourselves!

I have taken cases I did not want but rather than lose them for Osteopathy I treated them. Let’s forget the dollars we are making and think of the thing that is making the dollars for us. A spinal specialist can’t market his name, his office, his work. He must only provide quarters for the largest class ever enrolled in the institution.

Why Multiply Organizations?

We as members of the osteopathic profession stand together and we have to use our energies as we have been doing in the past and still are doing. In the past we wasted time, energy and money and got no results. We need to start organizing of all kinds. Why a separate organization of all kinds? Not that a waste of time, energy and money? The work they are doing is commendable; it should and must be continued. Why not both men and women? And why not directly through the AOA?

In the last three years we have turned out 900 osteopaths, in the same time 3,000 chiros were released; figure it out why. The philosophy and principles of osteopathic technique are always the same, no matter where practised. A few gain the idea that when they come into contact with a McManis table, their entire repertoire of technique must be changed in order to make use of the many features the table has to offer. They forget that the basic fundamentals of technique which we have taught all follow, if we wish to be successful in our manual methods of treatment, cannot be changed and that the McMans table is only a parallel to the "general treatment" osteopath.

One Speech You Want to Hear

Waldo woke 'em up out west with his speech on "Putting Osteopathy Foremost, Feet Forward." He will repeat it at Cleveland, July 4th, Osteopath Exhi-trserve for going just to hear Waldo.

In Re: Osteopathic—Chiropractic Amalgamation

This amalgamation question involves so much I cannot refrain from speaking my mind on the subject. Chiropractic stands in the same relationship to osteopathy as does the "good moral man" to Christianity. The good there is in church organization which lowers its standards to meet the demands of the world as is the church organization which lowers its standards to meet the demands of the world is good only in bodies in his daily life. So, also chiropractic is good only in its daily ministrations to humanity.

If they did, how would the chiropractic table, in the correction of such lesions it is necessary to carry the table permits of many desirable and necessary movements and call it a treatment. They are a parallel to the "general treatment" osteopath. It is time that the men at the head of our profession and the public should be acquainted with the normal amount of motion between the joints and the direction of each move ment with very little exertion on the part of the operator and the patient in as perfect state of health as it is possible to obtain. Therefore let us think seriously on the subject.

3-Year Diplomas Good in Minnesota

Dr. George W. Goode says we made a mistake in getting on the four year basis. We in Minnesota know that it is so, and we are still a three-year state, as also a few others still are. There is nothing to commend a four-year course, so far as we can see, to those taking the regular college course. The rationale of the McManis Table makes our diagnosis of limited motion more definite, also makes use of the time and energies of the women members in them. Perhaps it was chivalry on their part, but we are still pioneers in a vast work and need to work shoulder to shoulder, men and women alike. The institution of women as well as reasoning masculine minds must work together to become successful in all work. So in our osteopathic organizations.

There are rumors of further new organizations in the combining of states—that to my mind is a menace to osteopathic state organizations unless the states are small. If the distance is too great to the places of meeting the number attending will become smaller and we need one general magazine and one general journal. We need to bring out more, not less people.

Let's go! I advocate that the AOA raise the membership fee $10.00 or assess each member $10.00, to be used for publicity work by the Committee of Public Information and Education. If the additional money is used for this purpose and they will quit, let them quit. We must do this kind of work. Yes, it is only $50,000—just a drop in the ocean, some have said; but do not let us wait to start with a bucket full, or we will be out of luck. Don't let us wait until the chiros do their national magazine and then get on the job. Now is the time, today is the day.

Yes, it would be unfair to benefit all at the expense of the AOA members; but according to the constitution of the AOA, Article 11, this is one of the objectives of our organization. There are no reservations; we are to do these things whether the other fellow helps or not.

In straight table technique we always note the amount of motion between the joints and make our diagnosis of limited motion by being acquainted with the normal amount of movement possible in any given joint. In conjunction with this, the McManis table makes it possible to put the joints of the spinal column through their complete range of normal movement with very little exertion on the part of the operator and the patient in as perfect state of health as it is possible to obtain. Therefore let us think seriously on the subject.

The hardest part, for the beginner in McManis table technique, is to keep the mind on the spinal column and have to concentrate instead of on the table. In straight table technique the lesion is foremost and the different arcs and circles through which he carries the patient's body for a correction, are secondary. The embryo McManis technician thinks and works about the different movements of the table, and not the movement of the vertebrae in question a secondary issue. This is entirely wrong. In the correction of any spinal lesion the operator must always bear in mind the normal range of movements of the joint and the direction of each movement. Keeping these always in mind, it will always be an easy task to direct the supporting and movable section of the table through the pathologic arc.
We cannot blind ourselves to the fact that functional nervous conditions may closely mimic physical conditions. Neuropsychiatry, psychoneuroses, hysteria, and allied psychoneuroses are the causative factors in many cases of cancer, tuberculosis, and other diseases. The tuberculosis patient is always happy and "getting better," and at least the diagnosis of tuberculosis is satisfactorily made, with the diagnosis of cancer. My brother once said, "The neuropsychiatric enjoys bad health; the family and friends suffer." Our knowledge and appreciation of these conditions which we have not proved to be physical are slight, and for their treatment an enormous number of quack remedies is used. There is no knowledge of medical history and the condition of the nervous system not only to physical conditions, but so far as we can tell, to the patient's miseries. I venture to say that in sorrow and misfortune. The patient's problem is being attacked from many sides, because of its ravages in the Scandinavian countries. In Sweden massage was highly commercialized, but shortened the days of homeopathy but lengthened the days of neurosis, which is a part of regular medicine, for the profession the great value of active and passive improvement in the treatment of functional nervous conditions may closely resemble the physical conditions, breed neuroses, and result in sorrow and miscalculation. It is said that the Chinaman and the East Indian worship wooden images. But they do not. To them the images are emblematic, and they need these physical embryos to bring the mind to bear on the religious side. Religion is a means of improving on the mind eternal truths. For people lacking in imagination and to whom Christian science cannot appeal, there are a host of other cults, each with its remedy, in which sufficient support of the physical is present to give body to mental effect.

Mayo on Osteopathy

Osteopathy appears to be a combination of mental suggestion and certain definitely valuable mechanical practices. Anterior poliomyelitis once referred to as "the Scandinavian disease" because of its ravages in the Scandinavian countries. In Sweden massage was highly developed, and for years trained masseurs have been doing much for certain types of physical conditions. The war has taught the medical profession the great value of active and passive movements and how much can be accomplished thereby in suitable cases. The muscles, bones, and joints, and such treatment is now a recognized medical asset. Osteopathy, with all its absurdities, is petroleum in certain departments of medicine and in this field until recently neglected by the medical profession, but it has depended largely on suggestion for its effect. This cult has tried to improve its educational basis but it is doomed. To tell a man that his ribs or knees or other visible parts of his anatomy are diseased may be credited for a time, but if he compares these parts of his anatomy with those of members of his family, or perhaps joins a T. M. C. A. physical training school where he may take the hypochronic state. The great opportunity of Christianity lies in the moral, physical and physical misfortunes of man. I venture to say that people of this generation have not had the comforts of religion received by people of earlier generations. Religion is no longer such a potent force in the sickroom, "I would not presume to say that too much time has been put on the state to come, but there appears to be a distinct loss of relation to the state of the sick. The war has taught the medical profession the great value of active and passive movements and how much can be accomplished thereby in suitable cases. The muscles, bones, and joints, and such treatment is now a recognized medical asset.

The Osteopathic Post Graduate Efficiency Course

Given by
The DENVER POLyclINIC and
POST GRADUATE COLLEGE

This course, which has become so well known to the profession, will be given again beginning Monday, August 1st, and will last four weeks.

One who takes a post graduate course and gets two or three good pointers which will help him to do his work better, easier and quicker will find it is well worth the time and money spent to get it. In the Efficiency Course you get about fifty hours of actual efficiency work covering problems on every phase of the business side of practice and personal efficiency.

REVIEW

A review over many of the most important subjects will be given with the aid of some of the best men and women in the osteopathic profession. Subjects such as: Osteopathic Technique: Eye, Ear, Nose and Throat for the general practitioner; General Diagnosis; Refraction; Dietetics; Gynecology; Orificial Surgery; Medical Gymnastics, etc., will be given.

Many who have taken this course have greatly increased their practice within the first year, and have more than made up for the time spent by getting their work done with greater satisfaction as well as increased income.

Last summer the number desiring to take the course was more than could be accommodated. Those interested should register early in order to be sure of a reservation. For further information, address

of more than 2,000 at a minimum of $300 per capita; practically an annual income of $600-000 from student fees alone. The majority of chiropractic schools augment their income from fees by collecting in advance a monthly fee of $150 for treatment in the practice of the school and thereby obtain material wherein the students may practice the various adjustments and learn the technique. The advanced common school requirement exacted of the matriculant in chiropractic colleges must not be taken too seriously. The prospective student is not required to furnish even a grammar school diploma. A statement is made by the president of one of the well known eastern chiropractic schools that the only education necessary is the ability to read and write. The better class of chiropractic schools announce that a three-year course is required to earn the degree of Philosopher of Chiropractic. Their graduates glory in availing themselves of every opportunity to boast of their three years' education, a palpable deception in that they fail to mention that six months constitute a chiropractic year. The boast of a three years' education is frequently made by chiropractors in an endeavor to convince the public in a state maintaining a reasonable educational standard that the board of medical examiners is biased in denying the right of examination to chiropractors or others who fail to meet the statutory educational standards. The equipment of the average chiropractic school is pathetically meager, particularly in the laboratory branches.

Will an aggressive campaign of prosecution gradually drive out the violators by either forcing compliance with the law or, by means of some penalty imposed, drive the violator from the state? Our experience in California convinces us that the situation cannot be successfully handled along this line, and for two reasons: 1. The product of the chiropractic institutions, schooled to defy the law and denounce all regulations except by a chiropractic board, is multiplying to such a voluminous extent that to attempt to eradicate these violators is about as effective as commanding the waves of the sea to cease to roll. 2. An active campaign of prosecution in an attempt to compel respect for law invariably results in arousing public sentiment in the conviction that the medical board is waging a war of persecution. The chiropractor is fully alive to the psychology of the masses. He fully realizes the infinite value to his cause if well directed publicity is given each arrest and prosecution of a chiropractor. That this impression may be stronger, the chiropractor is urged to affiliate immediately with fraternal, religious, social and civic organizations as soon as he locates in a town so that he may arouse a commanding interest from diversified sources should he be arrested for violating the law.

As the chiropractor educates the public, so should the medical profession educate the masses that they may have a clearer perception of the effect of disease, the cause of disease and the prevention of disease. This campaign of education should convince the public that an individual untrained in the diagnosis of communicable disease is a serious public menace. National, state and municipal organizations should join, waging the campaign comprehensively, intensively and unceasingly. Newspapers and lay magazines should be utilized in convincing the public that: (1) a minimum standard of education should be required of every one who seeks the service of the state to practice any system of the healing art. 2. Chiropractic nomenclature must be changed so that (a) the hour of instruction will be at least fifty-three minutes and not as now, but thirty minutes; (b) the year of instruction will conform to that of modern education, which cannot conceive that three years of education can be completed in eighteen months' continuous work.

Doubters Made Believers
by Reading

"SOMETHING WRONG"

This clear little educational book with illustrations that emphasize the text is helping hundreds of laymen to get the viewpoint that gives them confidence in osteopathy. One Cleveland osteopath has used three hundred copies this past year.

Order them by the hundred. Give one to each patient. Use them for Christmas remembrances if you wish.

Kirksville, Mo., U. S. A.

An osteopath from St. Louis says, "The reason I spend my summer in Asheville is because I do not see an electric fan from the time I get there until I leave."

"Remember this when sending your patients away for the summer. Patients at this sanatorium used blankets every night last summer."

ASHEVILLE OSTEOPATHIC SANATORIUM, Elizabeth E. Smith, D. O., Asheville, North Carolina
Education of the Public Regarding the Problems of Medical Licensure

[From the AMA Journal, April 2.]

Mr. George W. Whiteside, counsel for the New York State Medical Society, New York:
The public evidences only mild interest in the finished product of medical education and less in the training and tests that the licentiate undergoes before he is permitted by the State to practice his profession. I have been told, when engaged in the prosecution of chiropractors whom I knew from investigation were ignorant men of small mental capacity, that they had among their patients, people of refinement, education and professional and social position in the community. I have been told by the courts before whom I have appeared in the prosecution of such practitioners that people of high station in professional life in the city had written letters of recommendation of such practitioners to the court before which they had been convicted. In a recent instance I learned that a chiropractor who had quit common school at the age of 12 years, had been a cabaret singer and haberdasher in the white light district of Broadway, and after a twelve months' course in an unauthorized and unrecognized so-called school of chiropractic, was openly advertising himself as a doctor of chiropractic and undertaking chiropractic adjustments in cases of serious human diseases. These unauthorized and poorly equipped schools appeal to an unthinking and uneducated class of the community. One of their potent arguments is that the course is a short one; that no preliminary educational standard is needed, that a clerk, a bookkeeper or a man in any other walk of life whose income is meager can make from $5,000 to $10,000 a year by practicing chiropractic. The appeal is made to man's cupidity and respect for the truth of their claims. In addition to public indifference to the importance of the maintenance of adequate standards for licensure in those practicing the healing art, we have the destructive force of propaganda carried on for the purpose of undermining and destroying public confidence in the medical profession. The medical profession has been inactive in this method of educating the public, the propagandists of various cults and healers have developed publicity organizations with little regard to the financial cost and less respect for the truth of their claims. In addition to public indifference to the importance of the maintenance of adequate standards for licensure in those practicing the healing art, we have the destructive force of propaganda carried on for the purpose of undermining and destroying public confidence in the medical profession. The medical profession has not sufficiently answered these false claims, has not rebutted these absurd contentions, has not exposed the fallacy and fraud that lurk in them; it has rather been content to rest and rely on the ultimate recognition by the public of the truth. The results of such investigations as have been made under the auspices of medical organizations have not been adequately brought to the public before the public. Such confidence and faith is the public are well founded, provided the public is given facts, in properly digestible form, which will support a conviction of truth. But there should be, in my judgment, an adequate means of expressing the congregated judgment of the medical profession to the public on all matters concerning which the public seeks information from the profession. The fundamental truths on which all scientific men must agree can and should be presented to the public with convincing force. The lying propaganda should be answered and exposed, and for this purpose systematic and persistent discussions of medical truths, ideals and problems in the public forum and the lay press should be undertaken.

Definitions

Your definition of osteopathy is likely to depend upon the state in which you practice, somewhat modified by the teachings of your alma mater to the class in which you graduated.

"F. C. Martin, D.O., Pontiac, Mich."
HOW I TREATED MY OWN CHILD
(Name to doctors on request)

Fergus Falls, Minn., Nov. 5th, 1920
The Dionol Company, Detroit, Michigan.

My 4-year-old boy, Frederick, pulled the cord of our electric heater and tipped a pan of boiling hot water on his arm and hand. My wife used the best dressings she had but the poor boy found no relief. She could no longer endure to see him suffer so frantically with the pain, and phoned for me. I applied Dionol and in about ten minutes the pain stopped, and there has not been any pain since.

This burn was very deep, and of course we thought it would leave a big scar, but do you know there will not be a sign of one? It is all healed up and one would never know that he had been burned at all. We obtained all these results in less than three weeks. I never saw such results in all my practice.

DOCTOR: Don't forget that Dionol gives equally positive results in local infections, wounds, leg ulcers and ulceration generally, and wherever local pyrexia is present. Try Dionol also for tampon treatments, piles, etc. It is exceptionally effective.

THE DIIONOL COMPANY, (Dept. 12) Garfield Bldg., Detroit, Michigan

Iowa Osteopaths Carry Heads Up Over Great Victory
By R. B. Gilmour, D.O., Sioux City, Iowa

The new Iowa Osteopathic law is already in active force. The board of trustees of D.O., met April 7th, at Des Moines, for the purpose of making a recommendation of several names to the Governor for his appointment to the board and we are expecting that it may be filled by the end of this week. Iowa feels that this is a real law and one that will be a model to many of the other states yet to get legislation. A careful reading will show many things that insure all the privileges that we should have that one really wonders how it was all acheived—especially when the fact is considered that we have been fighting for twenty years to get anything at all. Now we go out and get everything that we asked for and just to make it good got some few things that we did not dream of getting thrust upon us! For instance, the clause making the bill immediately active, thus allowing us to be ready to examine the coming graduating classes.

We feel mighty grateful in this state to Dr. Atzen and his committee for their advice and cooperation. We think that the AOA has been mighty fine, and we have come to the realization that it takes unity and cooperation right from the line to get there properly! Among our own men Drs. Marshall and Atzen spent their time and money unceasingly in this work and the proceeds have been behind them to a man. We have realized their sacrifices and have tried to support them. There has not been a moment's friction in the entire campaign. What those directing the work asked, they received. If they wanted a little pressure on a legislator the practitioner whose man he was quit business and went after that legislator. If they wanted money they gave it. It has been a direct example of what unity and harmony will do when we once get ready to help, instead of waiting the other fellow do it and then criticizing him for doing that way or failing to do it at all.

I want to say a good word for the Des Moines school national and state auxiliary. They have a membership of 100% of the student body and they are alive and coming. They raised $216.80 by voluntary subscription and gave it to the state. Then they raised another $100 and gave it to the AOA publicity fund. The Iowa Association is mighty proud of the people that are coming out of there with their training to step right into association work from the jump. We are hoping that all of them are going to stay right here with us when they complete their school work. They have been so zealous that the board of trustees has passed a resolution expressing the gratitude of the state association for their work.

There are one or two sections in the bill that we are particularly jubilant over and we feel that the surgical clause is good, too, and that in this instance at least we are leading the way to the medics here in Iowa at least.

We should also appreciate it if OP announces the coming meeting of our annual convention. This will be held at Ft. Des Moines Hotel, Des Moines, May 18, 19 and 20. We have already secured to appear on the program such men as Atzen, Edwards, Holmes, possibly Halladay.

We expect to run one of the osteopathic films for those days also. Also planning a regular jubilee one day over our great victory in legislation.

Iowa has room for many more D.O.'s and we feel that now they may come in with their heads up, conscious that they can establish themselves with all the right, duties and obligations of real physicians.

Good Words from Atlanta
Editorial of Dr. M. C. Hardin, in The Osteopathic Bulletin, Atlanta, Ga.: "We notice that Dr. Bunting's publishing house has moved into an up-to-date plant of their own. This speaks a good deal for our original publisher. Bunting has the get-up-and-go that makes success in any line of work. He has made a great success in the publicity business for our profession. He has given us a great newspaper in the Osteopathic Physician, filled with the animated spirit of its editor and throbbing with the youthful spirit of a new profession. We often overlook the value of a publication like this. It is through such a publication that unity of purpose, enthusiasm, and the general spirit of the profession pervades our membership and keeps alive in our breasts the interests of the profession at large and prevents us from placing too great stress upon our individual interests. If the M.D.'s have such a publication, we have never heard of it. In this respect, therefore, the genius of Harry Bunting has placed us in an enviable position in this respect. We do not always agree with Harry, nor does Harry always agree with himself, but his paper is a live sheet and we always read it with the greatest of interest. Long live Harry and the Osteopathic Physician! He has done a great service for osteopathy."
Dr. Hugh Russell a Prominent Witness in the Stillman Divorce Suit

[From the Chicago Tribune]

New York, May 5.—[Special.—]—Statements from a hysterical woman to her family physician were used against Mrs. "Fifi" Stillman today in the hearing of the divorce suit of James A. Stillman.

Dr. Hugh Russell of Buffalo, physician for the Stillman family and the Rockefeller Foundation, related before a referee today that Mrs. Stillman told him Fred Beauvais, Canadian guide, was the father of the then unborn Guy Stillman.

Tells of Stillman Visit

Dr. Russell said Stillman visited Mrs. Stillman at a Buffalo hotel where she was undergoing treatment. It was at that time, Dr. Russell said, Mrs. Stillman consulted him, saying the child to be born in about six months was not Stillman's, but the child of her Indian guide. Stillman's visit to Buffalo to see Dr. Russell and Mrs. Stillman evidently was the result of Mrs. Stillman's "hysterical" letter to Stillman.

Affects Rights as Heir

Dr. Russell's testimony, of double importance because of its bearing on both the divorce action and the legitimacy of Guy Stillman, which Mr. Stillman has attacked, was admitted after a bitter fight of nearly five hours while Mrs. Stillman's counsel tried to get Referee Daniel J. Gleason to exclude it on the ground that conversation between a physician and patient was privileged.

Dr. Russell was said to have testified that Mrs. Stillman seemed to be in a highly nervous, almost hysterical condition. The morning session ended with no disclosure of importance.

At the beginning of the afternoon session, however, Colonel William Rand, for Mr. Stillman, accused Dr. Russell of having conducted the direct examination, and asked Dr. Russell whether he had advised Mrs. Stillman to have advised Mrs. Stillman as a physician or a friend.

Advised as a Friend

"As both," Dr. Russell replied.

Colonel Rand then asked whether there was anything more concerning which he could testify.

"Nothing but some conversation with Mrs. Stillman which I think is privileged," Dr. Russell was said to have replied.

"Was what she told you necessary for the treatment of her case?" Dr. Russell was asked if he had handed Mrs. Stillman a letter. Dr. Russell was said to have answered, "No." Later he was said to have added, "Important, but not necessary."

"Was it what she told you necessary for the treatment of her case?" Dr. Russell was asked after Referee Gleason had refused to rule that this line of questioning was inadmissible.

Edwards Contributes Fifteen Articles on Finger Surgery

The New Book Will be the Finest Osteopathic Text Ever Published

Series Begins in No. 66, April Issue

These articles will be followed by his text on Finger Surgery. Watch The Osteopath for further information.

12. Finger Surgery or Osteopathic Ophthalmology.
13. Finger Surgery or Osteopathic Laryngology.
14. Finger Surgery or Osteopathic Otology.
15. Finger Surgery or Osteopathic Rhinology.

Remit $4.50 for 18 months, get three good back numbers and the entire series on Finger Surgery; make checks payable to R. H. Williams.

THE OSTEOPATH - Kansas City, Mo.
Dr. John B. Buehler of New York City, has leaped ahead of Dr. Sten Hanson of Fargo, N. Dak., in his efforts to sell bonds for the 7% First Mortgage Realty Gold Bond flotation. His bond was received 10:00 a.m., May 4, hence delay in answering your appeal for additional funds. Here is $500 more. I hope it will hammer home the message.

We offer both Dr. Buehler and Dr. Hanson's letter to us as models of professional and personal loyalty. What could a profession gain with a hundred or two men and women showing this spirit behind all such worthy professional enterprises?

From Dr. John B. Buehler, New York City

Dear Bunting: Your letter, dated 2/23, mailed 3/2, received 10:30 a.m., 5/4, has been answered to bring in the balance needed this month.

I am sorry I did not keep in closer touch with your needs and thus help to avoid this tight situation for you with your contractors. Success to you—Cordially yours, J. B. Buehler.

Naturally, we're strong for Buehler, and he will reap the reward richly on his investment, far more ways than one. Moreover, he's helping us. We're grateful.

From Dr. Sten Hanson, Fargo, N. Dak.

Enclosed herewith please find the sum of $100 in bank drafts for same amount of additional Bunting Building Bonds. Trusting the bids are all subscribed for by the profession here the time expires, and that you will have sufficient funds to complete the building with.

Cordially yours, Sten Hanson, M.D. This will make my total $2,000 of the bonds I have subscribed for.—S. H.

How a score or two of such friends and backers at critical moments would take all the worry out of business!

From Dr. Ruth E. Humphries, Waltham, Mass.

I'll take a bond and I hope it will hammer me more nails into our Osteopathic Publishing House.

From Dr. W. S. Heatwole, Salisbury, Md.

If you have not closed your bond sale yet and Miss Handy asks me to write you for two bids, she will take them up about April 15th. Let me know if she can expect them.

(She got them!—Editor.)

From Dr. F. C. Jones, Los Angeles, Calif.

I wish to help a bit to build that fortress for osteopathy and have enclosed a check $100 for one of these 7% First Mortgage Realty Gold Bonds. My working days are over but he is my mate.

From Dr. Jno. L. Ralston, Glencoe, Illinois

By your Dr. Bunting: At the "Eleventh Hour" I am sending you a $500.00 check for bonds you mentioned should send check $100 for one of these 7% First Mortgage Realty Gold. My working days are over but he is my mate.

From Dr. Julia E. Foster, Butler, Pa.

Reserve for me Bunting Building 7% First Mortgage Real Estate Gold Bonds to amount of $200. Enclosed find remittance for $200 full payment. I wish you every success.

From Dr. L. E. Staff, Jacksonville, Ill.

Enclosed find checks for $100 which I have received for two $100 bonds, which kindly have registered for her and mailed to her address below: Edw. C. Staff, New Canton, Ill. I trust that all of your bonds will have been floated by the 31st.

My mother-in-law thought she would give you a lift if your real estate mortgage gold bonds were not moving out as fast as you had hoped, so enclosed you will find her check for two $100 bonds, which kindly have registered for her and mailed to her address below: Mrs. Amelia S. Breitenstein, 690 Jordan St., Jacksonville, Ill. It might seem that I had appointed myself as one of your down-state agents. I have been talking your bonds because I believe they will have to be a benefit to us as well as to yourself.

From Dr. Lena C. Corkill, Norton, Kans.

Here's hoping you go "over the top" a flying. Reserve me $200 of B. B.'s. Buying your good 7% First Mortgage Realty Gold Bonds is helping oneself, helping you and helping osteopathy.

From Dr. G. W. Reade, E. Orange, N. J.

Save me a bond and I will send you the hundred dollars for it cash after the first of April, when I receive interest now due.

From Dr. P. V. Aaronson, San Francisco

Enclosed please find check for the other bond. Will say if you are not successful in getting all bonds sold I will take another one, although I am a little short at present.

From Dr. John A. MacDonald, Boston, Mass.

Save me a $100 Bunting Building Bond and I'll send you a $100 check before March 31st. Wrote you 11-20-20 to explain why I could not pay for at least one side wall of the new plant. The above is an IOU and you must save me a bond on it—until the 31st only.

From Dr. Mary E. Peck, San Antonio, Texas

Dear Harry: Enclosed you will find Chicago exchange for one hundred dollars for which please send me one of your First Mortgage Bonds. I am sorry not to send a thousand instead. I feel that I must add a few shingles to that wonderful new building, in which we all feel deeply interested and are very proud. And if you need more I may be able to sell some Oil Stock and cover the whole roof. Ha! Ha! We are too busy even to be polite to our friends.

From Dr. Chester W. Gray, Hornell, N. Y.

Enclosed find $500 New York draft, for which please send me equivalent of your building bonds.

This Bond Flotation is not Finished Yet! We Still Have 29 One Hundred Dollar Bonds Which We Are Anxious to Have You Buy.

Special Information for Osteopaths

Under the laws of some States osteopaths are prohibited from using anything of a drug nature.

Dionol and Emulsified Dionol have no drug contents whatever and hence do not come under these restrictions. Their action is in strict consonance with osteopathic principles, being entirely mechanical, hence no drug re-actions are possible.

Osteopaths, throughout America, are using large quantities of these preparations, and there has never been a legal exception taken to their use, excepting in one case, and when the authorities learned the above facts the case went by default and they never even appeared against the doctor in question.

Dionol treatment is the only remedial agent that we are aware of that acts strictly in a mechanical sense and without drug reaction and which may be safely employed, internally or externally by drugless physicians generally.—The Dionol Co., Garfield Bldg., Detroit, Mich.

The Delaware Springs Sanitarium

Emphasizes Diagnosis, believing that a condition accurately diagnosed is half cured.

All modern facilities for diagnosis, as well as treatment, are found in our equipment.

Our institution has been inspected and endorsed by many of the best men in our profession.

THE DELAWARE SPRINGS SANITARIUM

NOT FINISHED YET!

We need $2,900 yet, the worst way!
We would like to sell twenty-nine remaining gold bonds bearing 7 per cent just as quickly as this news reaches our friends who have loose money to put where it will be safe and make good interest and where it will also do good for osteopathy and for ourselves. We need the money!
Every Hundred Dollars Helps!
Won't you take a bond—or if you have some already take another—or take several more?
Our job of financing the new building is not yet completed and will not be completed until every bond is sold and paid for.
There are still bonds to sell.
We have twenty-nine $100 bonds yet to sell.
Help us over-subscribe the issue royally and be able to report the job as wholly finished by next issue.
It is not finished yet.
We would like to see it over-subscribed ten thousand dollars.
Don't imagine they're all gone just because about thirty days ago a lot of our friends took for granted that the issue was already over-subscribed and sales suddenly stopped short. That, we hope, may be our last appeal to you to reissue bond buying until the whole glorious job is finished—Cordially, The Whole Family of The Bunting Publishing Plant at Waukegan.

Both as a Science and Art
Osteopathy must continue to be presented as a science and an art if it is to command public respect and confidence and, obviously, can therefore, not be restricted nor circumscribed. To adhere exclusively to dogma is unscientific, makes of it simply an art and robs its practitioner of the status of physicians.—O. J. Snyder, D. O., Philadelphia.

A Mistake
I think the worst knock-out osteopathy ever received here was when the Kansas Committee of-Five allowed the M. B.'s to get them to raise the standard to 4 terms of 8 months as the course at our schools in 1915. The people as a whole do not think osteopathy is any different than chiropractic, and we have kept out many a person who would have taken a 27 month course—long enough for a D.O., any time. But Charles Still said it would harm osteopathy—C. E. Hulet, D.D., Topeka, Kansas.

DOCTOR—HERE IS A HELPING HAND!

WHY NOT USE Bran-O-Lax?

Gilbert's BRAN-O-LAX is used extensively by Osteopathic physicians and hospitals in treating patients for constipation, indigestion and internal disorders. BRAN-O-LAX combines the merits of all other wheat bran preparations. It is in the only logical form—that of a condensed tablet, mineral and convenient. They will keep indefinitely.

BRAN-O-LAX is a light food diet for the sick and convalescent, as well as a gentle laxative. BRAN-O-LAX contains one heaping tablespoon of plain nutritious wheat bran. In eating four or five tablets, you will have taken into the stomach more wheat bran than if you had eaten one half loaf Graham or Whole wheat bread. 1 Box 25c Post Paid U. S. or Canada.

5 Boxes $1.00 Post Paid. Prices in quantities on request.

GILBERT BRAN-O-LAX COMPANY
Lynchburg, Va.
Great Progress Made in Curing Woman's Ills by Osteopathic Discoveries

Every wife and mother will be greatly interested and instructed by the June issue of "Osteopathic Health," the popular health magazine issued from Chicago by the osteopathic profession, which gives a lucid explanation about the "Mechanical Causes of Woman's Ills, and How Osteopathic Adjustment Cures Them." This article—which is written for the information of the laity, not for doctors—reveals that a good share of all the common everyday ills and weaknesses of girlhood and womanhood are caused or aggravated by mechanical disturbances in the spine and pelvis called "lesions". These lesions are usually pressure points in the tissues which, under finger pressure by the osteopathic diagnostician, readily reveal themselves as sore spots to the patient. Sometimes these sore spots will be so acutely painful under finger pressure as to feel like needle stab.

It is explained in this article how such lesions operate in the body to cause disturbance of function, weakness of organs, pain and disease by blocking the life-giving and health-building currents of nerve-force and blood and lymph-food of the cells and tissues of the human organism. When such a mechanical fault is set up in either the spinal or pelvic anatomy of a woman makes trouble. There is no wonder that she will suffer from such distressing things as menstrual irregularities, painful menses, leucorrhea, bearing down feelings, headache, backache, leg-ache, nervousness, melancholy, insomnia, constipation, bloating, dropsy, sterility, dyspepsia, and the various other things which blight the lives of so many girls and women. When such actual mechanical faults exist in the human organism, it is explained, no amount of other kinds of treatment may avail to correct the case until such lesions have been corrected by osteopathic adjustment. Thus the way of escape is opened up by this article for thousands of women who may have been life-long sufferers believing that there was no hope of relief for them. What such women should realize is that there is merely no hope of cure for them from drugs, electricity, change of climate, high-priced specialization, instrumentation and such other things as they have already tried and exhausted, but that this new point of view in diagnosis represented by osteopathy with its new technique of mechanical adjustment of lesions offers new hope and in countless thousands of cases has restored women to health after all the classic methods of medical and surgical treatment have failed. It is surely worth looking into by all women who suffer.

If you are interested in reading this article for its advanced light in gynecological science, you may obtain a free copy by applying to Dr. O. H. Meredith, of street and town address here) or of the publishers, The Bunting Publications, Inc., Waukegan, Ill. A post card will bring it.

We've Had Our First Fire

We had been in our new offices in our fire-proof plant but five days when we had a so-called fire. It didn't do any more damage than burning batter cakes on the kitchen stove. The decorators had left some oil-soaked rags on the floor overnight. At 7:00 a.m. spontaneous combustion! Big smoke. Alarm. Run by the fire engine, red chemise engine, red hook and ladder; excited citizenry and J. J. S., our shipping clerk. Burning rags thrown out the window. Not a cent's worth of damage. Executive heads just laughed when they heard there had been a fire. "Oh, yes," they said, "we anticipated that—we should worry? Cement, brick, steel and wired glass are awful hard to get to burn."

THE BUNTING PUBLICITY SERVICE FOR OSTEOPATHS

Wouldn't You Be Proud If It Were Said of You?

Whereas, our fellow citizen and colleague, Dr. Michael A. Lane, has been taken from us by the hand of death, it is resolved by the Faculty of the American School of Osteopathy:

That the City of Kirksville will long be better for having numbered among her citizens this strong, keen, constructive thinker;

That the American School of Osteopathy, and those who have been her students for the past seven years, will be forever the gainer because of the instruction given by this well-beloved and much admired teacher;

That the Osteopathic profession will go forward to bigger, deeper, broader, better things because of the researches and the spoken and printed words of this fearless, whole-hearted, loyal disciple of Andrew Taylor Still;

That even the vast world of science will be benefited through the ages because he lived and thought and worked;

That while we deeply mourn his loss as a friend and associate, we rejoice that in knowing our fellow citizens have been enriched beyond measure and our usefulness increased;

That our sincere sympathy is extended to the bereaved family and friends; That copies of these resolutions be sent to the family, be entered on the records of the American School of Osteopathy, and be suitably published.

For the faculty,

Rogers Platt, D.O., M. R. McCollum, D.O.

Dr. Gordon W. Barrett Installs Latest X-Ray Outfit

Dr. G. W. Barrett, Woburn, Mass., has installed a Coolidge bedside x-ray instrument. The machine is manufactured by the Clapp-Anderson Company of Boston. It is one of the most complete units manufactured today for radiographic and fluoroscopic examinations. The instrument also can be adjusted to give superficial or deep fractional treatment with its rays. The x-ray tube itself is enclosed in a lead glass case which is equivalent to a covering of 1/16 inch of metal. The x-ray tube is protected from burns for both the patient and operator. Another feature is the absolute noiselessness with which the machine operates. Films instead of plates are used in taking pictures and the actual time consumed in the completion of a picture from the exposure to the final fixing of the film is from six to seven minutes. This instrument was invented and perfected during the war and it was used extensively both in this country and in France in army base hospitals. Dr. Barrett has had a dark room fitted up and will develop his own films as soon as they are recorded.

Montana Osteopaths Have a Fine Hospital in Chico

Chico Springs Hospital and Sanitarium at Emigrant, Montana, situated in plain view of His Sublime Highness, Emigrant Mountain, which towers 11,000 feet into the empyrean, is making very gratifying growth in patronage and public favor. Of the 2,390 cases treated the past year, over 900 were surgical cases and the balance or nearly 1,500 were osteopathic. Here is an institution where the non-surgical cases really get osteopathic treatment, and the surgical cases, good surgery, just as soon as it seems imperative. That is surely a winning and safe combination.

Dr. George H. Townsend, the chief surgeon, located at Chico in 1912 and the patronage of the institution he has built up has increased very rapidly. The building space has had to be increased six times. Dr. L. L. Ferguson is internist and technician, Dr. H. Thomas Ashlock of Kirkville fame, is consulting internist. Dr. T. C. Coons of Oklahoma is the dentist. Only graduate nurses are employed.

Osteopaths from the northwest send many patients yearly to Chico. Aside from the actual patients hundreds of people stop at Chico Springs with their sick friends, while many others come for rest only on their vacations. These two classes of course stopping at the hotel. All osteopaths are welcome at the sanitarium clinics which are conducted daily.

Montana osteopaths are educating the people to realize that an osteopath is a real physician in every sense of the word.

Normalizing the Tonsil
By Dr. F. C. Card, Tulsa, Oklahoma

The April 3rd, 1920, issue of the American Medical Journal published an article on the frequency of abscesses of the lung after tonsillectomy. The writer, who is an instructor in Medicine in the University of Kansas, holds that for six years reports of pulmonary abscesses following tonsillectomy are a common occurrence, as found by careful diagnosticians of the lung. These abscesses occur in spite of every surgical safeguard. He brings out the warning that, as so little is known of the connection between the tonsil and lung, a halt should be called in this popular and lucrative profession and Dr. Campbell gave the history and explanation of this operation.

The April 3rd, 1920, issue of the American Medical Journal published an article on the frequency of abscesses of the lung after tonsillectomy. The writer, who is an instructor in Medicine in the University of Kansas, holds that for six years reports of pulmonary abscesses following tonsillectomy are a common occurrence, as found by careful diagnosticians of the lung. These abscesses occur in spite of every surgical safeguard. He brings out the warning that, as so little is known of the connection between the tonsil and lung, a halt should be called in this popular and lucrative profession of the theatrical and musical walks.

Dr. Hugh Russell a Prominent Witness in the Stillman Divorce Suit
(Continued from page 24)

�She told me that James A. Stillman was not the father of her coming child,� Dr. Russell was said to have replied.

�Did she tell you who was the father?� the witness asked.

�Must I tell?� Dr. Russell asked with every appearance of reluctance. Then he was said to have replied, in a low tone:

�Fred Beauvais,�

Objection to Dr. Russell's answers to the last two questions were made by Abel I. White and John B. Stanchfield of counsel for Mrs. Stillman, and John E. Mack of Poughkeepsie, special guardian for Guy Stillman. An objection was made to nearly every question and answer all through Dr. Russell's testimony. It was said it is likely an effort will be made to have his replies stricken from the record.

Stillman Reaches Buffalo

Dr. Russell then went on to testify that after Mrs. Stillman had the conversation with him, Mr. Stillman arrived at Buffalo, presumably as the result of the so-called "hysterical" letter said to have been written to him by Mrs. Stillman about that time. It was learned that Mr. Stillman, who was accompanied by Miss Anne Stillman, their daughter, joined Mrs. Stillman at the Hotel Iroquois, that Mr. and Mrs. Stillman went to the home of Dr. and Mrs. Russell for tea, and that both families went together to Niagara Falls on a sightseeing trip the following day.

It was learned that Mrs. Stillman had been a patient of Dr. Russell for four or five years, and that he was called to give osteopathic treatment to Mr. Russell, son of wealthy members of the Stillman family. Through the Stillman family Dr. Russell was said to have obtained a number of wealthy patients in New York City, and during the last year or two he is said to have come to New York frequently to treat members of the Rockefeller family and others.

Dr. Russell's direct examination had not been completed when the hearing adjourned. The hearing will be resumed May 19, and following that Mrs. Stillman's lawyers will cross-examine him.
THE OSTEOPATHIC PHYSICIAN

Harvest Leaflets

to Reach the Multitude and Arouse the Disinterested

Our new line of introductory and supplementary printed leaflets are designed to enable osteopaths to do wider and more systematic campaigning at unprecedentedly low rates per thousand (or per hundred) of names covered. These informal messages make easy and economical the undertaking of broadcast distributions and engineering systematic results. If you are a subscriber to our magazine, the cost of mailing of these leaflets will be felt as a deterrent factor. You can economically and speedily cover entire lists of any size by this medium and command instant attention. The harvest will be proportional to the sowing. Let us tell you how to plan and conduct such campaigns. Here is the splendid assortment of subjects offered you:

4-Page Harvest Leaflets

No. 1. What Doctor Shall I Employ?...

Price $1.25 per hundred.

6-Page Harvest Leaflets

No. 7. What is Osteopathy?

Price $1.50 per hundred.

8-Page Harvest Leaflets

No. 16. What Osteopathy Does for Women.

Price $2.00 per hundred.

1-Page Harvest Leaflets

No. 27. Insomnia.

Price $.75 per hundred.

Imprinting your professional card is FREE on all orders bought in thousand lots. On any number (or assortment) from 100 to 900 it costs $1.00 extra. These folders are sized to go in an ordinary letter envelope.

These osteopathic "Harvest Leaflets" do not take the place of campaigning by Osteopathic Health, but supplement it. They are scaled for easy, economical, wide distribution in units of thousands instead of hundreds, and are adequate to supply your want of wide and systematic campaigning as scientific propagandists of any worthy cause would do it. We have only begun to fight for Osteopathy!

The BUNTING PUBLICATIONS, Inc.

Waukegan, III.
THE OSTEOPATHIC PHYSICIAN

THE OSTEOPATHIC SPECIALIST

Diseases of the Ear, Nose, Throat and Eye

An incomparable brochure, designed for the use of both the specialist and general practitioner of osteopathy.

Prepared under the advice and with the direct assistance of the following editorial committee:

Dr. John Deason, Dr. C. C. Reid, Dr. T. J. Ruddy, Dr. Glen S. Moore, Dr. J. D. Edwards, Dr. John W. Bailey, and HSB.

These men all say it is a very fine and very serviceable production which has the charm of being easily usable and by useful for the specialists in our ranks, and the rank and file of our general practitioners who stand behind our specialists. It will build up confidence for the whole profession by enhancing the respect due osteopathy and will work to retain within our profession multitudes of our patients who now pass over to the medics when they require specialism.

Advance orders are now being booked for this great campaign number. We make this announcement thirty days in advance so as to give you time to place a special order with us. Already more than 50,000 copies have been ordered in excess of regular edition. They are ordering it in lots of 1,000. Will you use a thousand also?

The BUNTING PUBLICITY SERVICE FOR OSTEOPATHS

Waukegan Illinois

Iowa News

The new State Board of Osteopathy met April 21 and organized with following officers: Dr. C. J. Chestenst, Eastlake president; Dr. R. E. Williams, Des Moines, secretary treasurer; Dr. H. J. Marshall, Des Moines, vice­president. First examination under this board will be held at Des Moines, June 8, 9, and 10th, 1921. Applications for examination must be filed with the board at least 30 days prior to the date of the examination, and you are reminded that the Iowa law can be obtained from Dr. R. E. Gifford, 457 Security Building, Sioux City. Iowa law has not so far entered into any formal reciprocal agreement with states of the South. The greatest force is for license by reciprocity on its own merit. The same meeting of the state association was held at Des Moines, May 15 and 16. The program both professionally and socially was excellent. The reports indicate that the officers and members report that the secret of the Iowa Association will be glad to correspond with osteopathic physicians seeking licenses. There are a good many in this state and the new law is one that affords all the real privileges and obligations of a real physician.—R. H. Gilmore, D.O., SecretaryTreasurer.

Seattle News

The King County Osteopathic Association met with Drs. Winston-Ford and Ford, Dr. Elizabeth Hull Lane gave a talk—"Osteopathic Interpretation of Abnormal Blood Pressure". Current Therapeutic Events—Dr. James T. Schuyler.

Dr. Winston Ford returned to Seattle the middle of April, from a "swinging around the country", which covered almost eighteen thousand miles, and through twenty five states, studying business and financial conditions. Dr. Winston Ford, went through California, across the Southern states in the Eastern Pacific, stopping at every point of interest and motoring out into the country regions from the beaten lines. Studying the State of Arizona, Texas, Louisiana, Georgia, visiting Washington, D. C, and return via Utah, Idaho and Oregon.

Dr. H. W. Morse, President of the Wenatchee, Wash­ington Rotarians Club, which organization had charge of the reception on the Palisades-Pacific Lines.—"Wenatchee", was in Seattle when this big boat arrived, prior to its maiden trip across the Pacific, carrying food to starving China.

Florida News
