Spotlights on the Los Angeles AOA Convention

By H.S.B.

Los Angeles gave the profession one of the most momentous conventions socially ever held. Probably it was the happiest in its entertainment and diversions for delegates and visitors of the long list of 26 annual conventions of the AOA that have occurred thus far. It was not to be understood as meaning that the program was not an excellent one, for it was, but the social and delegations worked about as hard as usual, even if scaling Mt. Lowe—a mile high—and skating over to Catalina did break in on the usual monotony of work.

The Ambassador is a glorious place for holding a convention. We never before were treated to such room, sunlight, ventilation, comfort and luxurious appointments. Nobody got on anybody else's toes. Nobody got hot under the collar. Everybody felt comfortable and happy, and that meant the programs were well attended and thoroughly enjoyed. If anybody ever questioned whether a bully convention could be held by the AOA on the West Coast, they forgot, or never knew, that San Francisco gave us a glorious one about twelve years ago and Portland another about seven years ago—that doubt is now forever removed.

Eastern visitors find charm in travel to the West Coast not to be experienced anywhere else, and so it happened that mountains, canyons, deserts, parks, glaciers, seashores and all other scenic points of interest were visited by hundreds on their way or going home.

The chief editor of The OP is still in Yosemite Park while this issue goes to press so nothing but a rapid-fire bird's-eye view of the convention will be attempted here:

Almost 800 were registered.

Dr. George W. Goode of Boston, was elected president of the AOA for the ensuing year.

New York City was selected as the place of the next AOA convention in July, 1923.

Dr. Harry L. Chiles who has served the AOA for so many years as an executive officer and in an editorial capacity retired from the service and enters private practice in Orange, N. J.

Dr. William E. Waldo, who has sat on the board of trustees, in the house of delegates and at the business meeting for so long, was elected to the board for the next ten years. For many years he was the editor of the St. Louis Osteopathic Journal.

Dr. George W. Goode of Boston, Mass., New President of the AOA

"Resolved by the Board of Trustees of the American Osteopathic Association that we endorse the plan of organization and proposed operation of the Andrew T. Still College of Osteopathy and Surgery of Kirksville, Missouri, and that the American Osteopathic Association hereby give tentative recognition to this institution:

And, be it further resolved, that after said college is in operation, said college shall be inspected as soon as possible after its opening session, and if found satisfactory to the Department of Education, it shall be granted such recognition as will permit its graduates membership in the American Osteopathic Association."
Abrams' Session at Los Angeles Highly Interesting Big Audience

Francis A. Cave, D.O., M.D., Boston, Mass.

It is with pleasure that I accept your invitation to write my impressions of the address given by Dr. Albert Abrams at the Los Angeles convention, because it affords just one more opportunity for service to humanity through the osteopathic profession.

Pen and paper full short of the requirements, however, because "atmosphere" is something awfully subjective to everybody and to nobody. There was very much in evidence during the tense hour in which Dr. Abrams held the platform. Our profession honored itself in the size of the audience that greeted this distinguished scientist and benefactor of all humanity. And capture overlying when action; have looking when the wash. And go at that for this time, as he is on vacation, and况且 for the rest of you. And the ring to it.

It's a pity to work when you're really loafing. Besides, all the routine news of the convention will come to you in the AOA Journal, anyhow.

O. W. N. A. Meets at Los Angeles

The Osteopathic Women's National Association though but two years old shows a membership of several hundred.

The program given by them at Los Angeles was creditable and stimulating, showing nineteen state organizations, and many individual members in unorganized states.

They are affiliated with other women's organizations, Federated clubs, Legislative clubs, Business and Professional Women's clubs, etc. Through the O.W.N.A. clinics for women and children, educating the community, working in Health Conferences, and assisting in Legislative problems.

A winning social feature was the reception given by the California Women D.O.'s to the visiting women physicians at the home of Dr. Lora B. Emory.

Officers for the coming year: O.W.N.A. 1922-23: President, Dr. Josephine Lithgow; Vice President, Dr. Roberta Wimer-Ford, Seattle, Wash.; 1st Vice President, Dr. Grace Stratton Alrey, Salt Lake City; Treasurer, Dr. Clara Rind, New York City; Financial Sec'y, Dr. Leonora Grant, Seattle, Wash.; Corresponding Sec'y, Dr. Pauline Mantle, Springfield, Ill.; Auditor, Dr. Edith Cave, Boston, Mass.—Robert Wimer-Ford, D.O., Pres.

A rising vote of thanks was given him at the conclusion of the session.

Craig Automatic Table Makes Big Hit at Convention

Dr. Arthur Still Craig of Kansas City, Mo., made a great hit with his automatic treating machine run by electricity. It really gave one a very decent sort of relaxing treatment. Two ideas suggested themselves to the doctors examining this device. 1. In connection with the possibilities of treating people who don't require specific adjustment by a doctor but who need periodic relaxation, and the possibility of giving these treatments at lowered costs; and 2. The opportunity of the lone Osteopath with a tired back to treat himself. We believe the Craig Automatic will make a place for itself in our work.

AUBRAMS WORK BELONGS WITH OSTEOPATHY

I am certainly glad to see someone stimulating and strengthening the osteopathic profession. It certainly belongs with Osteopathy.—James Allen, D.O., Toronto, Ont., Canada.
An Appreciation of the Osteopathic Special

Please find enclosed list of the passengers on our Osteopathic Special. We felt that Dr. Fraser did such a good job in getting up this trip that all of us signed the testimonial of appreciation.

The Sante Fe outdid itself in taking care of us. The service was the best I ever had on any railroad and the dining car service was such as only the Sante Fe seems to be able to give.

It is a pleasure to work with you and we look forward to future association.

For me it was a wonderful trip, with great evenings and a wonderful goodbye on the train with the lights of the city of San Antonio shining above.

Dr. C. B. Atzen, Omaha, Neb.
Elise Tietke, Brooklyn, N.Y.
Dr. & Mrs. Edmund Grothue, Van Wert, Ohio.
Mrs. C. L. Bowar, Memphis, Tenn.
R. W. Proctor, Buffalo, Mass.
H. M. Cooklin, Battle Creek, Michigan.
J. R. Walker, Dallas, Tex.
W. C. Musser, Cleveland, Ohio.
Dr. and Mrs. R. E. Nicoll, Laredo, Tex.
G. L. Nolan, Springfield, Mo.
Dr. and Mrs. E. G. McCollum, Laredo, Tex.
H. L. Claridge, Liberty, Ind.
Miss Minnie A. Walsh, Chicago.
O. F. Belfall, Chattanooga, Tenn.
Mr. and Mrs. A. L. Wells, Cleveland, Ohio.
P. W. Gibson, Winfield, Kansas.
George L. Good, Goode, Virginia.
Catherine L. Anderson, Chicago.
W. J. Webb, Danville, Ill.
N. W. Shellenberger, Rockford, Illinois.
S. H. Kerner, Kansas City, Mo.
R. H. Thorburn, New York City.
Grace D. Clark, Providence, R.I.
R. V. Kennedy, Charleston, S.C.
R. E. B. White, San Antonio, Texas.
D. M. Conlin, Battle Creek, Mich.
E. J. Goode, Goode, Virginia.
Mrs. E. S. Herrick, Providence, Rhode Island.
Ellen B. LeGon, Mobile, Ala.
Jesse E. Johnson, Kansas City, Mo.
Ellen E. Anderson, Sioux City, Iowa.
Mrs. P. W. Gibson, Winfield, Kansas.
Dr. Anna B. O'Hara, New York City.
Mrs. H. W. Cooklin, Battle Creek, Michigan.
Hugh Cooklin, Jr., Battle Creek, Michigan.

Enroute, July 1, 1922

The California Limited, Santa Fe Railway.

We, the passengers on the Osteopathic Special enroute from Chicago to Los Angeles, wish to express our appreciation for the comforts and pleasures which have been ours during the five days of our transportation. We are due to our transportation thankyou's.

Mrs. J. R. McDougall, Chicago, Ill.
Mrs. M. R. Tiley, Kewanee, Ill.
Mrs. C. J. Christenson, Kewanee, Ill.
Mrs. L. B. Harned, Madison, Wis.
Mrs. G. V. Webster and son, Carthage, N.Y.
Mrs. R. C. Gilmour, Sioux City, Iowa.

The above is believed to be a complete list of the passengers on this train with the exception of our Transportation Chalresman and his family. James A. Fraser, Evanston; Mrs. James A. Fraser, Evanston; Miss Marion Fraser, Evanston.

Do You Know?

1. Only new matter is printed every mouth mouth in "Osteopathic Health." No articles, once printed, are ever used again in its pages, no matter how good. (Such classic Brochures as are included are therefore of the greatest interest.)

2. This layman's journal will contain articles written on course of the year a lot of sprightly news and topical talks about notable osteopathic affairs such as will interest both patients and public.

3. From time to time it will contain characteristic Buntin editorials on matters of vital osteopathic concern. Also--

4. A wealth of articles especially written for its pages by the best group of thinkers and writers in the profession—every article printed on order, every article paid for, and every article having passed muster as fully up to the critical journalistic standards of HSB.

5. Many discussions of single diseases. Do you hear it?—many discussions of diseases.

7. Shorter articles and more of them—-a wider variety of subjects.

8. Nothing within the covers of "OH" but Osteopathic, osteopathic interests, Osteopathic triumph! No side issues, no fads. "OH" is as always interest both patients and medical readers, and we can bring it home for you! Write us this day.

You can use this new "OH" with pleasure and profit in conducting your practice--But Do You? Let us make a survey of your field and its publicity possibilities. Expert knowledge and advice without obligation or cost to you. We've been bringing home the bacon for Osteopaths for twenty years, and we can bring it home for you! Write us this day.

BUNTING PUBLICITY SERVICE FOR OSTEOPATHS

Waukegan, Illinois

Museum of Osteopathic Medicine, Kirkville, MO
IX—History

Doctor H. Virgil Halladay, the eminent anatomist of the American School of Osteopathy, writes, "In reply to your letter asking for information respecting the cervical spine, I will say that laboratory specimens suitable for conducting such experiments are not easy to secure or to prepare, so I have not much laboratory work to report. My subject is bone; I have this in mind, however, and will see if I cannot do some research work which will supply you with definite information."

"I might say, however, that nature in permitting the various types of movement in the spine has made provision to take care of the cord as long as the movement is confined to the normal range and we cannot doubt further that since she builds so well mechanically, she has provided a factor of safety which will allow the spine to be moved considerably beyond the normal range of motion before the spinal cord is injured, provided, of course, that the structures return at once to within the normal range."

"Traction will elongate the cervical region. It will flex this region taking out the curve as the traction is made. By moving the cord forward against the anterior wall of the spinal canal but would hardly stretch the cord itself. Since there is the same type of curve in the lumbar region it will flex that region also moving the cord over against the anterior wall of the canal but hardly stretching the cord itself."

"Traction applied to the dorsal region will take out the dorsal curve moving the cord back against the posterior wall of the canal. Backward bending will do the same. In the side-dorsal region will about balance up the movement in the cervical and lumbar regions. It will move the cord itself, from swinging free in the spinal canal, to over against the canal wall."

"It is my opinion that forward bending of the spine will, in the degree to which it is applied, produce a corresponding amount of suction for it will undoubtedly elongate the spinal canal. Backward bending will do the reverse—shorten the spine and carry the spinal cord over near the posterior wall.

"In traction with forward bending there is, as you say, compression of the inter-vertebral discs especially in front and a separate pressure on the articular facets which will, of course, lengthen the spinal canal, but I cannot say that there would be any chance for an elongation of the spinal cord itself for it would merely be carried over near or against the anterior wall of the canal. It seems to me that it would require a considerable elongation of the spine or even greater hyper-flexion to produce any marked change in the tension on the spinal cord itself."

Direct-to-the-Home Publicity Wins Better Results Than Any Other Form of Advertising

That is what you obtain by using "Osteopathic Health"—direct-by-mail contact with the better class of homes in your community. Depending entirely upon the public to supply you with your new patients, the need of higher fees, better collections of the money due you, the help of an osteopathic assistant or need of a competent trained office girl. Whatever your office need may be, it is inextricably tied up to the need of vigorous and systematic direct-to-the-publicity campaigns with "Osteopathic Health", "Harvest Leaflets", and "Laity Brochures" which afford sure and easy victory for you.

It costs nothing to get an advertising survey of your field, based on expert knowledge of conditions and the ways to win what you want in exchange for your own efforts. We'll help you make more money if you give us a piece of the increase. That's fair enough— isn't it?

THE OSTEOPATHIC PHYSICIAN

Osteopathy in Great Britain

[From London (Eng.) Daily Mail and Weekly Dispatch]

A wave of interest in Osteopathy is at present flowing strongly through Great Britain; and it is evident that the system of therapeutics founded by Dr. Andrew Taylor Still is going to make good, by the test of public opinion and approval amongst the influential people in England, including amongst its patrons or on its Council, well known British personalities such as Lord Queensborough, Viscount Deerhurst, the Duchess of Hamilton, the Duchess of Sutherland, the Duke of Manchester, Lord Bearsted, Lord Chelmsford, whose names are a valuable tribute to the success which has attended Osteopathy and to the position which it has already attained in this country, and a hopeful augury that its message will be made fully known to the British people, up to the present surprisingly ignorant of this topic.

The premises at Wigmore St., which were leased for the Clinic are admirably suited for the work, being in the centre of the Harley St. area, the headquarters of the great medical specialists. They have been adequately fitted up and an X-ray apparatus, in addition to all other necessary appliances, has been installed, Dr. George S. Watson, a graduate of Kirksville, Mo., is the Osteopath in charge.

The opening function took the form of a demonstration and exposition of osteopathic methods and technique by Dr. Harvey Foote, Park Lane, the Chairman of the League; and it was given at the request of the Societe Internationale de Sciences et Beaux Arts, which was holding its annual Congress in London. From its inauguration it proved a gratifying success, showing how great is the demand for Osteopathy in England, and how quickly the public respond to its message of hope for the sick and suffering. Obviously Osteopathy has to be advertised. Everyone knows to the people of England to climb steadily in the position it occupies in the United States, its country of origin.

Patients came, benefited, and sent others. Already something like two thousand treatments have been given and there is always a long waiting list, so that the League is not considering the appointment of a second Osteopath. In response to many further appeals for lectures, demonstrations, exposition upon osteopathic methods, the League decided to hold a special function, which accordingly took place at the Hotel Cecil, London, on March 9th of this year. The following account of the proceedings was given in the Pall Mall Gazette, one of London's leading evening newspapers:

Miracle of Healing

TO-MORROW'S PRACTICAL DEMONSTRATION OF OSTEOPATHY.

What is Osteopathy?

This question, which is arousing widespread interest at the moment, will be answered full to-morrow afternoon in the shape of an actual demonstration of osteopathic methods and principles by the Osteopathic League of Great Britain. Osteopathy is, in a word, a system of healing by manipulative surgery—curing without drugs and operating, painlessly and without the knife.

THE PIONEER

This new system of therapeutics comes to us from America. It was evolved by Dr. Still, a famous surgeon in the Union Army in the American Civil War, who, in the stress and strain of that conflict, failed to get the result

Many Osteopathic Physicians Find It a Great Help

You doctors of Osteopathy have the faculty of finding the cause of ailments in your patients. You are not given to treating symptoms. You seek out the source of trouble. And very often you find the source of trouble in the spine—a deflected vertebra, a slight or perhaps well-defined curvature, or tender spots at various points. Now, in cases of that sort, in addition to the regular osteopathic treatment many of your brother practitioners have found a most efficient aid in the Philo Burt Spinal Appliance

The Philo Burt Spinal appliance serves to give your patients the utmost good from your scientific treatments. It supplements your work by helping retain the results as you achieve them step by step. A great many osteopathic practitioners of highest repute use with distinguished success the Philo Burt Spinal Appliance in all their cases of spinal trouble.

30-Day Guaranteed Trial

We will make to order a Philo Burt Appliance for any case you are treating, if, at the expiration of the trial period, the appliance is not satisfactory in your judgment.

On request we will send in detail and illustrated description of the Appliance, and letters from osteopathic physicians in evidence of its corrective efficiency.

Write today. Special discount to physicians.

PHILO BURT MFG. CO. 141-19 Odd Fellows Temple Jamestown, N. Y.
OPEN LETTER TO THE OSTEOPATHIC PROFESSION:--

We wish that we might look you in the eye when we say this, measure your thoughts as we say it and add the necessary "Punch" to the verbal postscripts in order to drive home a few facts applying to your particular and local conditions. However we can't afford the time and we are needed here to give prompt attention to the increasing mass of correspondence and so we address ourselves to you in Buntings' monthly message and ask that you consider this Personal and Important and demanding early attention.

Six months have elapsed since we began our educational campaign in behalf of The Andrew T. Still College of Osteopathy and Surgery--the Memorial to the Old Doctor. If you have sent us one or a dozen prospective students we have communicated with all of them, sent them arguments literature of our own--and will send more. Our Campaign was conceived and is intended to interest everyone in Osteopathy as the one exact system of therapy, as a great public health measure and as a Profession. We are reaching hundreds in every State of the Union.

Our correspondence indicates that Osteopathy is TAKING HOLD OF THE PUBLIC. The speed of the educational campaign will determine the completeness of the Victory.

We are doing our part--are you doing yours?

There are ten thousand potential Osteopathic Physicians--prospective students--somewhere. Help us to find them. Pull together and fill every one of our institutions where the standards meet the original ideals of the Old Doctor. More Osteopaths mean more friends of Osteopathy. More friends mean more power to Osteopathy. More power means absolute, unquestioned indorsement and finally recognition, in State educational institutions.

Our Matriculations already insure success for the opening year of the Memorial College, many more are "on the way" and our Campaign is but started. We are out to build for Osteopathy and incidentally to give the Profession a College into which Commercialism will never enter.

From the Osteopathic Physician and our own publications you are made acquainted with our Faculty--not yet complete--and you know our plans and our ideals. Thousands of you have already given practical co-operation and we take this opportunity to thank you publicly. Constructive co-operation will carry Osteopathy "Over the Top".

Our Catalog is off the press. If you fail to receive your copy drop us a line. And this leads us to ask pardon for our issuing a double number of Achievement this month. We were just too busy to meet all of the requirements last month, but we were working for Osteopathy--and you, so it's as well after all. If you have more prospective students for us, send them along and we will at least sell them Osteopathy, if not the new College.

Cordially yours,

THE ANDREW T. STILL COLLEGE OF OSTEOPATHY AND SURGERY

Kirksville, Mo.
July 1st, 1922.

GEORGE M. LAUGHLIN, D.O., President
ARTHUR D. BECKER, D.O., Dean
JOHN T. BURNS Secretary
THE OSTEOPATHIC PHYSICIAN

he hoped for from the remedial power of drugs.

He found that Nature was the great curative agency, and devoted his skill and research to evolving a system that would best aid Nature to exercise its recuperative and healing powers.

The system he evolved he named Osteopathy. To put it in non-technical language, this system is based on the mechanical idea of the body.

DEVELOPMENTS

Dr. Still found that if the nerve paths are unobstructed and the channels through which the vital fluids are circulated are kept open, a condition of health will obtain.

He sought for, and found, mechanical causes for disordered functioning of the head, neck, thorax, abdomen, pelvis, or extremities.

He learned how to adjust the bony framework, to find and correct the mal-adjustments that were interfering with the free play of Nature's forces.

STRIKING RESULTS

The medical profession in America took up and developed his system. It produced such striking and beneficial results that it was given State sanction and approval, and today there are colleges of Osteopathy in the great medical schools of the United States where men are trained in anatomy and manipulative surgery just as doctors are trained in medicine, and are practising, after a four years' qualifying course, in all the cities and towns of America.

In recent years Osteopathy has been brought to this country, where the results that have followed have made it increasingly popular and appreciated.

One of its most enthusiastic supporters is Viscount Deerhurst, as he is also a striking example of its benefits. When he was in France he contracted a severe lameness, which caused him intense agony, and prevented him from walking. Ordinary medical methods could give him no relief. Dr. Foote, the Park-lane osteopathic specialist, cured him in a few treatments.

MAN OF 50 CURED

In a recent article Lord Deerhurst gave, from his own knowledge, a typical example of osteopathic methods.

A man of fifty developed atrophy of the arm. It was useless, bandaged to his side and about to become gangrenous. Eminent surgeons advised amputation. An osteopathic specialist was called in and cured the arm in fifteen minutes. A misplaced collar-bone had cut off the blood supply to the arm. Manipulative surgery put the bone back into position, restored circulation, and the use of the arm was immediately regained.

PROFESSIONAL TRIBUTE

Medical men are paying handsome tribute to the success of osteopathic methods.

Dr. W. Kelmar MacDonald, M.D., Edinburgh (Syme's Scholar) recently gave an address on its value as a system of therapeutics.

At tomorrow's demonstration Dr. Mathew Thomson, a Fellow of the Royal College of Surgeons of Ireland (where he taught with Sir Auckland Geddes, the British Ambassador to America), will give an address on his recent visit to the United States to study trans-atlantic methods and therapeutics.

A LONDON CLINIC

Mr. Leslie Henson, between the acts of "Sally" at the Winter Garden Theatre, will also give an account of the benefits he has derived from Osteopathy.

This demonstration will be a practical one. Under the auspices of the League for the Prevention of Spinal Curvature (Ltd.), a clinic has been established at 12, Wigmore Street, W., where osteopathic treatment is given at reduced fees to such as need it.

The demonstrations will be given by the chairman, Mr. Harvey Foote, of Park Lane. Patients will be placed on the treatment table, and the osteopathic diagnosis and treatment explained, and the technique of manipulative surgery illustrated in a number of cases.

"My mother can now eat stones." This startling statement was made by Mr. Harry Green, the famous actor, recently, at the Hotel Cecil, where a large audience had gathered together to hear all about osteopathy.

It may not be literally true, but the famous comedian wanted to give the highest testimonial to this wonderful science of osteopathy, which is comparatively new to the world and almost unknown in England. His mother had suffered for years with a chronic form of indigestion, and she was cured by an Osteopath. He, himself, is subject to severe throat trouble, but in place of visiting the ordinary medical man, he consults the Osteopath. It was rather a sad thing for English people to hear Mr. Green say that never in any country had he seen so many cripples and so many crippled children as he had in England.

SKEPTIC'S CONVERSION

Dr. Thomas said that the spinal cord may be said to be the telegraphic wire of the body. Down the front part of it messages of power and news. Thus are we able to walk, to move our heads.

Hank Perkins He Sez: "By Heck, Do You Know. . .

NED TUCKER ALLOWS HE'S SAVED ENOUGH ON DOCTOR BILLS THIS YEAR TO DANCE NERE BUY A NEW MOVING MACHINE BY HAVIN' THAT 'ER OSTEOPATH
and talk. On the other hand, messages of sensation proceed through the spinal column to the brain.

Everyone knows that when a finger is put on a hot stove the pain of the burn is not immediately felt. There is even time to put the injured finger in your mouth. It is not until the message of sensation has been conveyed to the brain that the pain becomes apparent.

The lecture was followed by many demonstrations conducted by Dr. R. Harvey Foote, who is undoubtedly the best known Osteopath in this country, and who is also the President of the Royal College of Physicians in Ireland. He has established the osteopathic clinic at 12 Wigmore St., W. Another famous actor, Mr. Leslie Henson, also addressed the audience, warmly eulogising Osteopathy, which, he said, had probably saved his life and certainly saved his theatrical career.

This report which of course does not propose to be a technical account, can convey but an axiom that the God of Nature is the fountain of life and certainly saved many lives. The results that have followed the introduction of Osteopathy to this country, the Pall Mall Gazette said, have made it increasingly popular and appreciated.

R. Harvey Foote, D.O., of London, England

It may be added that many doctors are now sending patients to Osteopaths in this country for treatment. This development has greatly impressed the world of journalism, and a few days ago the Daily News, one of the leading English daily newspapers, sent a special correspondent to interview Dr. Harvey Foote on the question of the probable future relations of the British medical profession to Osteopathy.

In reply to this question Dr. Foote said: "Osteopathy is a system of healing without drugs, of effecting cures of many ailments by manipulative surgery, of operating—that is to say, bloodlessly and without the knife. Most people have read in the newspapers of cures by Osteopaths after medical men practising along more orthodox lines have failed. The precise nature of this new method is, however, very little understood.

In an interview with a Daily News representative, Dr. Harvey Foote, ex-President of the British Osteopathic Association and chairman of the League for the Prevention of Spinal Curvature, did his best to dispel the mystery that surrounds what is, after all, a fairly simple matter.

The Fountain of Wisdom

"Osteopathy," he explained, "is based on the axiom that the God of Nature is the fountain of skill and wisdom, and that, as concerns the physical body, man cannot improve its normal functioning, nor add anything to a perfect work. It recognizes that all the chemicals and drugs necessary to maintain health are manufactured by the body in its own laboratories.

"Disease is, in general, an obstruction to the free play of Nature's forces. The business and practice of the Osteopath are to find out the cause of the obstruction and to remove it."

Regarding the human framework as a machine, Osteopaths hold that there are mechanical causes for disordered functioning, or imperfect working, of the head, neck, thorax, abdomen, or pelvis.

The Spine

They study, in particular, the spine, which encloses the spinal cord, by which the nervous impulses are carried, essential for the proper
functioning of the various parts and organs of the body. Having found the mechanical cause of a malady, the Osteopath corrects it by manipulation, and a cure follows.

Dr. Foote does not, of course, claim that Osteopaths can cure genuinely "incurable" cases.

"But," he declared, "they have cured cases that were wrongly diagnosed and described as "incurable" before they reached the Osteopaths.

"Cases of apparently chronic asthma, colitis, sciatica, lumbago, varying forms of paralysis, neuritis, rheumatism, kidney diseases, heart affections, women's ailments, and curvature of the spine, have been cured by osteopathic treatment, which found the mechanical causes that induced the diseases, and corrected them."

"What are to be the future relations between Osteopathy and the medical profession?" Dr. Foote was asked.

A DIFFICULTY

"The difficulty is," he replied, "that while Osteopathy has proved itself by successfully curing diseases, there is no machinery by which proof can be brought officially, with a claim for recognition, before the medical profession."

"There is not even a register of qualified Osteopathy recognized by the British Medical Society, as, say, masseurs are recognized. It is, therefore, permissible for a doctor to work with a masseur, but a breach of medical ethics at present for him to work with a qualified Osteopath."

"Ultimately, I do not doubt that there will be Chairs of Osteopathy in the medical schools. The medical faculty is daily modifying its long adhesion to drug administration and turning more and more to the osteopathic standard."

"But that is only a half-hearted way to deal with the matter. Osteopathic techniques cannot be acquired except by long and special study. It is for the medical profession, stimulated by public demand, to recognize this fact."

Another interesting development, which shows the rapid strides Osteopathy is making in public interest, is the arrival of its first Osteopathic Magazine," founded by Dr. Harvey Foote, has just been issued, and has already had a gratifying success. Copies being clamored for from all parts of the country. The magazine gives an interesting account of the League for the Prevention of Spinal Curvature, of the London Clinic, and reprints the article on Osteopathy written for one of Lord Northcliffe's papers by Viscount Deerhurst. It gives also a full account of the annual dinner of the British Osteopathic Association, together with the brilliant paper on Osteopathy contributed by one of its notable exponents in the British Medical profession, Dr. W. Kelman Macdonald, M.D., D.O. of Edinburgh.

On the whole it is clear that Osteopathy is "coming to its own" in England, a development upon which congratulations may be extended both to the English people, and to the gallant little band of pioneers in this country, whose patient and able work is now beginning to reap the great harvest of popular appreciation and gratitude.

Lesions of the Radius

These interesting lesions of the radius came to me recently. Case A. Lady aged 50 years fell on slippery sidewalk. Symptom: Pain and weakness on thumb side of wrist, when in certain position, so that she would almost drop anything held in that hand as, for instance, when passing a dish at the table. Lesion: Radius slipped distally. Diagnosis of Lesion: Patient sitting in chair with both arms resting, elbows flexed, palms spread upward upon table. Palpation showed space between head of radius and the humerus greater than on other (normal) arm. Also the area sensitive to pressure. Technique: Patient in fac sessions as he prefers, elbow resting on table, forearm vertical. Operator standing opposite grasps wrist with index above end of radius. Lifts arm vertically and brings arm still held vertically down to table, with sudden force. Result: Almost immediate relief. Case B. Lady aged 40 fell down stairs. Symptom: Loss of grip in right hand, especially in fingers supplied by ulnar nerve. Lesion: Radius crowded upward. Diagnosis of Lesion: Space between head of radius and humerus less than on other (normal) arm and the area sensitive to pressure. Technique: With thumb pressing against head of radius so as to wedge in between radius and humerus, the forearm grasped at wrist was rotated back and forth, accompanied by an outward pull. Result: General improvement.—Chauncey Luverence, D.O., Springfield, Ohio.

Osteopathic Ads in August Magazines

The next magazine advertisements on Osteopathy will appear in the following magazines:

We will carry a two-thirds page ad in the Cosmopolitan and a one-eighth page ad in each of the other magazines on the above list.

This ad which will appear simultaneously in the above group of magazines is illustrated with a handsome pen drawing. It carries the word Osteopathy in bold face type at the top of the ad, and we feel that it will make a strong appeal for Osteopathy as well as for reader attention.

We have secured as additional media (to be used as soon as sufficient funds can be raised) The American Magazine and Pictorial Review. All magazines mentioned above have written us that they will accept and complete a schedule of advertising for us—H. M. Walker, D.O., Secretary Society for the Advancement of Osteopathy.

Could Have Been Worse

The other day a real genuine D. O. came into my office and related to me his humiliation regarding a remark made by one of his patients. She was a woman 70 years old, suffering from chronic bronchial asthma. The D.O. had treated her a number of times, such as 5 A.M.—11 P. M. etc., and his charges had been reasonable, so one day last week she pulled him, saying she had been real sick with a cold and had to call in a doctor. The D.O. was "peved" and wanted to know what I thought. I said to him, my advice to him was and is, that he should be delighted that she did not call in a chloro- Wm. H. Burton, D.O., Muncie, Indiana.

"Where There Is No Vision the People Perish"
The merit of the McManis tables is measured, in a degree, by their popularity. **One hundred and twenty-five** upper classmen of the American School of Osteopathy have taken our course in “McManis Table Technique” during the past two months. They like our tables! Why? Because the technique is easier and joint motion normalized quicker.

Then again, in our active practice, we find that patients greatly prefer the “McManis Way.”

And last, we have over **2,000** satisfied users of McManis Tables in the Field! WHY? (You answer).

McMANIS TABLE COMPANY  Kirksville, Missouri, U. S. A.

**Dr. W. J. Hughes, Interne**

Our hospital has enjoyed a very prosperous, satisfactory second year, with about 40 percent increase of patronage over the previous year. Dr. Hardy has proven to be very capable in the Ear, Nose, Throat and Eye Department. His work is high class and conservative. No effort is made to do things in a spectacular way. Dr. Earl Laughlin and Dr. Buissey have both proved very valuable in their departments also.

For further information address Dr. George M. Laughlin, Kirksville, Mo.

George A. Bridges, D.O., Providence, R.I.

During the New England Osteopathic Convention recently held at Providence, R.I., a most spectacular ear clinic was staged. Operations for restoration of hearing were performed by Dr. Curtis H. Muncie of Brooklyn, who also demonstrated his methods of examination and post-operative treatments.

Only such cases were accepted as were in the early stages of deafness and where hearing could be immediately and permanently restored and would not require after treatment. Cases that were deeply seated were rejected, not because they could not be greatly benefited through Constructive Finger Surgery but all of these cases require special post-operative treatment and Doctor Muncie would not assume the responsibility of his operative work unless he could personally supervise this important after care or unless this responsibility would be assumed by a local osteopathic aurist.

All patients received a complete physical examination by Dr. Bridges first and favorable cases were then examined by Dr. Muncie the day before the operative work. Blood pressure, Wasserman blood test and urinalysis were made before applying for ear examination.

The doctor and his assistants made accurate measured test of each patient's hearing capacity with the tuning forks, watch acoumeter and low tone clock. These tests were then verified by disinterested parties. After the operation the patient's hearing was tested again, showing the most spectacular improvement imaginable. In fact hearing was restored "while you waited." The doctor invited any skeptic in the audience to satisfy himself through any fair test.

Case Report
Abdominal Pain

A man of 33 suffering with abdominal pain for two years following appendectomy, was cured in 3 weeks by daily Gravitising.

The response was remarkable. The suffering had been intense, but was relieved at the first treatment; and by the third day he had short recurrences only. All tenderness disappeared. There has been no recurrence.

The West Oscillatory-Gravity Treatment as given on the Gravitiser is well known and approved by both the Medical and Osteopathic professions.

A famous New York surgeon says, "It is the most logical treatment of the ptoses I have ever seen."

This extract is typical of the many tributes to the merit of the West Gravitiser.

The A.S.O. Hospital at Kirksville, Missouri, has gone to a great deal of trouble and expense to equip what they believe is one of the best X-ray outfits in the country.

We will be glad to handle a part or all of your X-ray work.

Fraternally yours,

GEORGE A. STILL,
A.S.O. Hospital, Kirksville, Mo.
Osteopathic Constructive Finger Surgery is destined to revolutionize the treatment of deafness not only in cases of the marvelous results obtained but because it removes the cause of deafness and conserves and makes normal dis- eased and damaged tissues and thereby establishes health. Humanity has waited long for a specific remedy for the restoration of hearing. This method deals with causes and does not treat symptoms (effects). I have waited three weeks before writing this paper to watch the progress of the operations and have given most all the cases post operative treatment and examination and will say that in no case can I find any evidence of the tubes being injured in any way and in every case a marked improvement has been made in the deafness.

Says It Can't Be Done

I have been reading The OP about the 50 and 80 treatments a day, but I do not believe it can be done with real Osteopathy. It seems to me some are trying to outdo the chiro.—J. O. Mc- Dowell, D.O., Brunswick, Maine.

The Chicago College of Osteopathy

5200-5250 Ellis Avenue, Chicago

The Autumn Quarter begins September 23, 1922
The Winter Quarter begins January 2, 1923
Each quarter is twelve weeks in length.

Students are admitted at the opening of any quarter, but no student is admitted after the first week of a quarter.

The special Post Graduate course will begin Monday, September 11, 1922, and continue for two weeks, closing Saturday, September 23rd. Tuition for this special Post Graduate course, $50.00. An especially attractive course is offered this year. All gradu­ ates of recognized osteopathic colleges are cordially invited to avail themselves of this opportunity.

This College is registered with the New York State Board of Regents. This means that it maintains the high standard required by that Board. It also means that gradu­ ates of this College are admitted to the examination for license to practice in New York State and all other states which maintain the New York standard.

Students who wish to be qualified to practice in New York State should be careful to select a College which is registered with the New York Board of Regents.

For the right kind of a course in Osteopathy extensive clinical facilities are needed.

The clinical opportunities of Chicago are unsurpassed. No prospective student of Osteopathy should overlook the importance of these clinical opportunities. The College maintains an excellent Osteopathic Hospital.

In the Training School for Nurses there is room for a few more candidates. The Training School course is two years in length. At least one year high school work, or its equivalent, is required for admission. Tuition is free and after the probationary period of one year's study, students are paid $20.00 per month during the first year and $25.00 per month during the second year. The student nurses receive board, room and laundry free, and two weeks' vacation each year.

THE OSTEOPATHIC PHYSICIAN

Method of Determining Rations

Dr. Von Pirquet of Vienna gave three very interesting lectures at Harvard Medical School a while ago on the most modern method of determining rations, based on his "NEM" (nutritive element of milk) and the sitting height as related to the intestinal absorptive area. A great idea! A recent A.M.A. Journal—December, I believe—tells all about it. Couldn't some one write it up for us?—Emily Augusta Rabb, D.O., Malden, Mass.

Wonderful Power of the Body

The power of the body was exemplified in a recent case of a woman 67 years old suffering from congestion of the lungs. For over two weeks, night and day, this woman sat bolt up­ right as the slightest incline brought on a choking spell. As she was of slight build it seemed as if she could not manage for so long a time to sit without severe distress. She is now functioning normally though still weak.—Morris Lynchenheim, D.O., Chicago, Ill.

Natural Therapeutics

is playing a more and more important part in the prevention and cure of disease. It is the hope of suffering humanity—taught and clearly explained in the

LIBRARY OF NATURAL THERAPEUTICS

By Henry Lindlahr, M.D.

A veritable mine of valuable information for physicians and laymen.

Volume 1—PHILOSOPHY OF NATURAL THERAPEUTICS—describes the fundamental laws and principles under­ lying the processes of health, disease and cure; these laws destined to revolutionize the theory and practice of medical science are not yet taught or applied in any of the recognized schools of medical or drugless therapy. 500 pages, cloth, $2.40.

Volume 2—PRACTICE OF NATURAL THERAPEUTICS—describes the most ef­ ficient natural methods for the prevention and cure of disease: raw food, milk diet, fasting, etc.; hydrotherapy; curative exer­ cises; prenatal and postnatal care of the baby; treatment of acute and chronic diseases, including nervous, mental and psychical disorders. 432 pages, cloth, $2.40.

Volume 3—NATURE CURE COOK BOOK AND A B C OF NATURAL DIETETICS—Part I, 1,000 vegetarian recipes. Part II, reduces food chemistry and curative dietetics to an exact science. 489 pages, cloth, $2.40.

The principles in these and other books by Dr. Lindlahr have been successfully demonstrated for twenty years in the Lindlahr Sanitariums at Chicago and Elmhurst, Illinois.

Send for descriptive literature of the Library of Natural Therapeutics, FREE.
The incompetent ileoceleal valve and Petrolatum Liquidum

A noted authority, whose observations have covered hundreds of cases, states that aside from routine measures, the regular use of liquid petrolatum is the most effective means of combating incompetency of the ileoceleal valve. Medicinal laxatives increase the antiperistalsis by which the reflux from the colon into the small intestine is increased. Liquid Petrolatum increases the motility of the small intestine, but does not increase antiperistalsis.

To find a viscosity which would give Nujol its greatest efficacy, its makers conducted exhaustive research and clinical test. Consistencies were tried, ranging from a thin fluid to a jelly. The viscosity finally adopted is the one best suited to human requirements and is in accord with the opinion of the highest medical authorities.

That the value of Nujol to the medical profession is generally recognized is attested by its use by physicians and in hospitals the world over. Sample and authoritative literature dealing with the general and specific uses of Nujol will be sent gratis.

WHERE the ELECTRONIC REA

The McManis Physico-Clinical Laboratory has the distinction of conducting the first Oscilloclast solid in the belief that the combination of Osteopathy and physical therapy makes it possible for the student practicing this type of medicine to develop a broader knowledge base.

DR. J. V. McMANIS' FIRST CLASS

FIRST ROW—Dr. Glenn Warner, Wooster, Ohio
Dr. Norman B. Wilbanks, Eureka, Illinois
Dr. Gertrude Clements, Fort Worth, Texas
Dr. Elmer R. Williams, Rock Rapids, Iowa
SECOND ROW—Dr. Arthur Brese, Hilliard, Ohio
Dr. J. V. McManis and Dr. Lulu F. McManis, Instructors
Dr. P. C. VanderVoort, Harveysburg, Ohio

The second class in the E. R. A. at the McManis Laboratory started June 1st with an enrollment of thirty. The following Doctors matriculated in the order listed, and will receive their Oscilloclasts and attachments in the same order:

Dr. H. J. Marshall, Des Moines, Iowa
Dr. E. H. Cosner, Dayton, Ohio
Dr. Marie H. Harkins, London, Canada
Dr. L. E. Staff, Jacksonville, Illinois
Dr. Wade M. Lockman, Weatherford, Texas
Dr. Clara Barker, Eureka, Illinois
Dr. J. W. Eisminger, Oklahoma City, Oklahoma
Dr. J. L. Coles, Pawnee, Okla.
Dr. Addison O'Neill, Daytona, Florida

NEW CLASS STARTING AUGUST 1ST

Due to the demand from the Osteopathic field, a class in E. R. A. will start at the McManis Physico-Clinical Laboratory August first. Osteopathic Practitioners are matriculating now, and are making plans to be here at that time.

The course will last for a period of one month. Classes are held each day in the week, excepting Sunday. Six hours a day will be devoted to instruction and the rest of the day to practice. Those taking the work will be required to be in attendance at all classes, and to pass a satisfactory examination before graduating.

AUGUST FIRST

The McManis Physico-Clinical Laboratory gives special attention to Diagnosis and Treatment. Special instructions and containers will be furnished to Physicians who wish to send in blood samples for diagnosis.

Referred patients will be given careful attention. Oscilloclastic and Osteopathic Treatments given to every case accepted.

General information, charges for matriculation, tuition, blood examination, and rates for treatment will be furnished upon request.

KIRKSVILLE, MISSOURI
THE NEW ERA OF PROGRESS 
AT KIRKSVILLE

We received very encouraging and interesting information from Kirksville about the affairs of the Andrew T. Still College of Osteopathy, its student campaign, and its development in the town. Announcement has been made about completing the faculty membership as follows:

Dr. S. G. Bandeen, M. S., D. V. M., D.O., Graduate of the A. S. O., University of Wiscon, Michigan State College and several special courses in bacteriology, physiology, social hygiene, pathology, etc., in a number of other institutions. He will personally conduct the work in pathology, bacteriology and hygiene and be in supervision over the laboratory work. Dr. Bandeen was professor of pathology, bacteriology and clinical diagnosis at the A.S.O. 1921-22. He is a member of the Royal Institute of Public Health of England. Dr. Bandeen will act as Dean of the Department of Applied Science.

Dr. Leon E. Page, D.O. Graduate of the A.S.O. Has been in practice in Vermont during the past several years and previously held an interest in the Still-Hildreth Sanitarium. He is now taking some special work in anatomy at the University of Michigan and will instruct in applied science.

Grover C. Stukey, B. S. Graduate of the Kirksville State Teachers College and held fellowships in hygiene and assistant in anatomy at the A.S.O. He will complete his senior year with us and will be an instructor in descriptive anatomy and in charge of the dissection laboratory. He is at present a graduate student at the University of Chicago.

Dr. Orville D. Ellis, D.O. Graduate of the A.S.O. and has had special courses in eye, ear, nose and throat and gynecology and genito-urinary diseases in The Laughlin Hospital. He will be assistant in osteopathic technique and clinics. Dr. Ellis is now practicing in Indianapolis.

Dr. Seth C. Thomas, D.D.S. Graduate of the Washington University Dental College and since that time has been dental surgeon for The Laughlin Hospital. He will instruct in oral infection.

The college building is progressing satisfactorily and will be ready for occupancy at the opening of the school year. Plans have now been made of developing the faculty conferences and to complete the organization of all details in connection with the school. The college building will be completed by August 15th except the auditorium, which will be completed by the first of September. No additional building plans have been made. There is no need of adding another building to the college at this time. The first step is to get the building in the best condition and then to consider the need of adding another building.

Text Books by Osteopaths

Let the colleges use textbooks written by Osteopaths. The Chirors and Medics use their own and therefore do not care whether the books published by Osteopaths are as much up to date as those of the orthodox colleges. Let the osteopaths publish books that will show the world that they have the same ability as the medics and chirors to publish books. This will result in the osteopaths getting more recognition and honor and the osteopathic profession being more respected.

Eighty-Six a Day

Wm. A. Settle, D.O., Peterborough, Ont., Can.

Dear Doctor:—I heard somewhere just the other day of an Osteopath who gives as high as eighty-six treatments in a single day, and he does not begin before eight o'clock in the fore­noon and has finished by five o'clock in the afternoon. Are such “stunts” as that possible in the practice of Osteopathy?

Yours sincerely,

Q. U. E. D.

DEAR QUED.

THE STUNT to which.

YOU HAVE referred.

IF IT would be fair.

TO SPEAK of something.

WHICH ONE man considers.

JUST A days work.

AS ONLY a “stunt.”

IS QUITE possible.

ALTHOUGH NOT common.

IN FACT years ago.

IN THE infancy of this.

SCIENCE OF Osteopathy.

THE OSTEOPATH who worked.

IN THE old infirmary.

AT KIRKSVILLE.

USED TO quite often.

ROLL UP such a record.

THEN CAME the period.

OF MUSCLE kneading.

AND RIB cracking.

WHEN the measure.

OF AN Osteopath’s ability.

WAS THE infinite number.

AND UNFATHOMABLE intricacy.

OF THE manips he knew.

AND THE time he spent.

DAWDLING OVER his patient.

BUT WE’RE going back.

MY DEAR friend.

TO THE good old days.

AND THE good old ways.

OF REAL Osteopathy.

FIND IT and fix it.

AND LEAVE it alone.

HAS BECOME our watchword.

YEa OUR battle cry.

FROM THIS time on.

AND THE dawdler.

AND THE time server.

WHO SEEKS to get by.

ON THE number of manips.

HE CAN put across.

WILL FIND the society.

OF REAL ten finger.

SIMON PURE Osteopaths.

ANYTHING BUT congenial.

SOME PATIENTS I Have Known

Her Only Daughter

John Barr, D.O.

Dear Mother,

Have you ever treated an “only daughter”? It is quite different from treating anyone else and is, of course, because the patient is so different from all the other patients you have to deal with. No, the anatomies and physiologies do not mention this difference in only daughters but I assure you the difference will soon be made plain by daughter’s Mother.

Some years ago I had the pleasure of finding out for myself this essential difference. Since then I have found it out again, several times, and always they differ in just the same manner, that is there is no one in all the world just like daughter.

Usually you get let in for it so gently that you do not realize it until too late. When some fond Mother tells you that she has decided to bring her daughter to you because she feels that you will give her the sympathetic attention which a growing girl should have from her phys­ician, it naturally flatters you to think she has picked you out. As a matter of fact she probably picked you out because she had been gently passed along by all other physicians she had been to.

You take the case then, on Mother’s say so that it is different. You find out that the girl has been very carefully brought up and that you are expected to take the same care in handling her. This usually means that twice as much time will be taken up in the dressing room and twice as many questions must be asked so as not to hurt daughter’s feelings while you extract the needed information as to what she is suffering from.

Your treatment will have to be gentle and yet thorough because they have so little money for treatment and yet the average treatment is so fatiguing:

Before each visit, Mother will drag you into a whispered aside from which you will gather the many secret suscepti­bilities which you, by appropriate advice, must overcome. Mother has found that daughter has ceased to listen to her con­stant stream of advice on how to live and so she uses you as a convenient figure­head to pour forth the knowledge that daughter should must have in order to grow up into the perfect young lady she is supposed to be.

You allow this vicarious mothering to go on until one day when Mother happens to be out of hearing, daughter calmly informs you what a nice old lady you are, “you talk just like Mother!” Then you swear off the advice and stick to your treatment.

Daughter invariably tells you there is nothing the matter when you inquire, but Mother makes up for that by telling in detail just what the trouble is. So you start in on the treatment. Daughter keeps protesting that it is all entirely un­necessary and Mother sits there with eagle eye peeled to see that no item of trouble is overlooked.

Occasionally these only daughters escape their Mother’s vigilance long enough to become engaged. Mother then makes the best of a bad situation and brings the only child in for a few treatments to build her up in advance. By this time, you are very tired of the entire affair but you go through with it, hoping the engage­ment will be a short one.

Sometimes it is and you congratulate the girl and silently thank her for getting married so that you can get rid of Mother. Three or four months later, in comes the pair of them. Daughter has developed a new set of troubles it seems and Mother has found a new field of endeavor to direct for her only daughter who may be married but, after all, is still an only daughter. You feel sorry for the hus­band and then, when they are gone you feel for yourself, feel as did the small boy who carried the old cut in a sack four weary miles away from home—and found her waiting on the door-step for his return.

NOW HEARKEN to this.

MY DEAR QUED.

JUST THE other day.

I SAW a certain Osteopath.

GIVE TWENTY treatments.

IN THIRTY minutes.

AND THIS was the testimony.

OF ALMOST everyone.

OF HIS patients.

“I AM very much better.”

SO THAT’S that.

AND I thank you.
Hunting Is More Than Merely Slaying Game

My avocation is Hunting. Fifteen white tail (Virginia) deer and two black bears is the net result of my parties hunting the past season, every ounce of which was eaten and every hide saved.

As a boy of ten my rifle was always blazing at squirrels, chipmunks, woodchucks, and an occasional muskrat or watersnake, in New York State. As I grew large enough to handle heavier shooting irons, I hunted deer, bear and moose in New York, Maine and Vermont, although no moose has ever fallen to my marksman's shot.

In the simple food of camp life; the hard tramp of the trail; the mental alertness essential to outwitting big game; in the tired trudge back to camp—perhaps empty-handed, or perhaps with the heavy burden of fresh meat, when the trudge is much easier; the camp fire with everyone's best hunting experience; and a night of real sleep—with no phone, telegrams, auto honks, or square wheeled trolley cars. In all this there is health such as is non-existent in

This lake in the swamp is five miles across. One hundred yards back from this shore was our camp. Broadway cabarets, or personally conducted tours.

Some might feel that they know how to take personally conducted tours, to take auto trips, to register and dress up in a city hotel, but that they do not know how to handle shooting irons, how to find a deer or bear, or how to hit one vitally if they should see one. Probably not, but in good hands they will find great pleasure in the learning. They will find intelligent guides who can hold their interest for weeks teaching them woods-craft and the language of woods.

Slaying game is not all there is to a hunting party. The actual time spent shooting game on a thirty days hunt may total only a few minutes. But the thrill of those few minutes cannot be put on paper—human language being contrived for the uses of common life and

for a few minutes—there is a deer or a bear always seemingly when and where least expected, off in high at sight of you, or as I have sometimes witnessed, too frightened to move. With composure, reliance and confidence you lay your head and squeeze. Your gun barks, down goes your game, kicks along the ground a few yards, and then lies dead. The bark of your gun has been heard for a mile by the others in your party—they share your thrill, wonder whether something is down or was it a miss.

Only a small part of the fun is in the killing. I have hunted many a long day without any of the party getting a shot and had a wonderful time. Searching for tracks, noting whether the droppings are fresh or old. Finding a bed on the lee side of a knoll or ticket, sometimes finding that it has been abandoned on your approach as it is yet warm. Examining the surrounding trees for hair, or for horn scratches indicating a buck, and the height of the scratches somewhat his size. Or we come across bear spoor. We note their size, whether a large bear or several. Come to a water hole where brum has had a mud bath and as he makes away has rubbed the mud onto the saplings and underbrush giving another clue as to his size if the ground has not taken the foot prints well. We find the droppings, it is fresh, we poke it with a stick (crude analytical method), we learn what kind of food they are now living on. We locate the feeding grounds, here they are feeding because the breaks are fresh. Early next morning we are scattered over this feeding ground, sitting for bear, sometimes for hours

This deer crossing a railroad was knocked down by a shot that put one eye out. Summoning together all his wanting energy he rose to his fore weak wobbly legs and posed for his picture. He could not make them work and sank down after the camera snapped. He was then finished by a second shot.

I have harbored a chronic suspicion for white grubs and beetles disturbed my nap. She was killed four days later at about the same place and her feet would about fit the trail we saw that day. One of our party moving along quietly in mocassins was going over a large fallenJuniper when he saw Mrs. Bear asleep on the other side. He put on the brakes and reverse and fell backward off the tree trunk. Old Mrs. Bear alarmed and curious stood on her hind legs and looked over just as he regained his balance. He drew a chuck of head through her heart, just to quiet her nerves, and she let out a terrible shriek and fell dead. We carried her a mile through the woods, five miles across the lake in a skiff, and she is shown here on a logging car on the way to camp.

This orphan (for we had slain his mother) was an amiable and well behaved pet as long as his belly was well upholstered.

Things Stirring in Ohio

The Ohio osteopathic profession is on fire with enthusiasm for self-betterment. It was stirred into action during its State convention held in The Delaware Banquet in last October when the grandeur of the institution furnished the setting; the high quality of the staff and its work furnished the interest; the completeness of the equipment and excellence of its operation furnished the enthusiasm; the forcefulness of Dr. C. C. Reid and his boosters furnished the punch.

Today, after nine months have passed I can record the formation of more new professional projects; the carrying onward simultaneously of more new movements and the giving and taking of more post graduate work than ever before during a similar period of time of the Society's life.

Clinics are being conducted in Cincinnati, Columbus, Springfield, Upper Sandusky, Zanesville, Warren, Cleveland and other places. These are not all spinal clinics. There are those who sit aside a day a month for a general clinic. Drs. Calvert, Hess and Shepard are operating, such a one, and effective work is being done, too.

A movement was initiated during April where is a children's permanent free clinic—once or more often each week—was established in each physician's office. This met with a wide response.

No longer can the general public advance the statement that the Osteopaths of Ohio are not as a profession philanthropic.

The idea of grouping D.O.'s for better work, better service and greater professional strength is spreading also.

In addition to the Roscoe Osteopathic Clinic in Cleveland, Drs. Weaver and Drs. Bowers and their associates are now combined in a leased building on State street, in Columbus.

Dr. Kerr of Cleveland has recently purchased a suitable building in a splendidly accessible residential section of Cleveland, where Drs. Kerr, Johnson, Schultz and Pearl Barker have practiced and who are planning to open a clinic in the Cleveland Osteopathic Clinic Group. Their intention is to also establish a free children's clinic.

The grouping plan is a correct idea. In unity there is strength and protection for our patients. Dr. Robert H. Nichols says that a rushed general practitioner is a menace to his community. He might be the last person to let us know the time when it is at its best. —R. E. Roscoe, D.O., Chairman of Ohio Clinics.

The Psychology of Starting Patients Right

II.

Last month was the beginning of our series of articles on this particular part of the Efficient Osteopath. The patient has arrived. The doctor is in. The doctor is busy. Of course, all good doctors are busy all the time while they are at their office. They are not lounging around with their feet on the desk or sitting in the reception room, gossiping or smoking cigarettes. Idle friends are not sitting around in the office. The secretary is in her place.

If there is anything particular about this treating a patient. If he is not, he is in his private office, studying, looking over his mail, reading his magazines, looking over his case or writing articles, or something that is useful to him in his professional line.

The patient is informed that the doctor is busy. By the secretary and not by the doctor. Just exactly what that business is. She will then come in and tell the doctor in a quiet way that Mr. So-and-So is here and wants to see him, professionally. It is important that the secretary find out whether the person who has stepped into the office wants to see the doctor professionally or personally, or is a detailer or other kind of agent. In this way, if one has come to see the doctor socially, he is at once impressed that the doctor is seeing people professionally and that he is not interested in the things of the office, as he is in treating a patient.

The patient begins to be impressed with the idea that this information will be held in absolute confidence. Sometimes, the patient may be on the opposite side, as many patients are. He may be holding the attitude that this doctor wants a patient. Of course, we do want patients of us, unfortunately, and some even under wrong conditions, according to my observation. When you come in, of course, very well speak this line and tell him by name, because you have been informed before as to what his name is. Sometimes, the name might be in the room and introduce you which is a fair introduction, but that is not essential at all, because the condition does not come under social relations. After you have seen the patient and seen his card partially filled out, greet him in such a way as to disarm any criticism in his mind, as at once he is critical of you. You look, speak and carry yourself, very likely.

Your attitude should be dignified and business like in a way to make the patient realize that you are a busy man and not hunting for patients on any ground, that you do good work, allow no neglect. The first thing to do is to find out the amount for which the patient came in the office. That particular thing may be one of the least important. Many times you will find upon examination that there are a lot of ailments he has not even thought of getting rid of. These report blanks should be such as to remind you of every structure of the body, for example, the chest would remind you of the heart and lungs, and your report should remind you of the stomach, the pelvic of the uterus. The case report should be long enough to give the history, this suggestion to your mind. Of course it should not carry a lot of excess or unnecessary things.

After you have gone over all these things the patient begins to be impressed with the idea that you are not a slacker in your work. Up to this point, you have taken the history without having the patient prepared for any physical examination. That is better ordinarly to do that. It is not good psychology to get him ready for a physical examination, before the history is taken. Unless you proceed step by step there will be a tendency to get a reaction. He thinks you are pushing him or getting ready to treat him. He is ready then to put up a defense, very likely. After the history is taken, it is very easy to explain to a person that if he ever comes back, it will only take a few minutes to get your case report on file, that this information will be held in absolute confidence and will never be divulged to any one else.

That way you will tell the patient that the nurse will take him to a room for general examination and tell him how to get ready. You will then leave the room. The nurse will be around and will be seen to know all. If the patient is all ready in the proper room, you proceed to make the physical examination,
Don't fuss with the messy poultice or temporize with the "mud" applications in trying to subdue local inflammation.

Apply a liberal coating of DIONOL, cover with absorbent cotton and watch results.

DIONOL contains no drugs. Its action depends upon definite physiologico-electric laws. Its results will demonstrate not only its efficiency, but its superiority.

Micajah’s Medicated Wafers have stood the test of time and trial, and are steadily increasing in use, and need only a trial to demonstrate their practical efficiency over a wide range of commonly met with conditions. A clinical test brings practical conviction.

**Little Stories of the Clinic**

C.W. Young, D.O., Grand Junction, Colo.

**Story No. 43**

Saturday, April 29, Mr. B. came to my office and said he wanted me to see his son D., who was desperately sick with pneumonia. Mr. B. related that he was a believer in medicine and medical doctors, and that he had three doctors for his boy and they said "nothing more could be done for him," and he came to me as one grasping at a straw.

The boy was twenty years of age and had often been sick. He had suffered severely with the flu and had had pneumonia twice before. Before my coming he had been ill since Sunday and after Wednesday the temperature had run from 104 degrees to 105 degrees F. He remembered nothing that happened during the first five days I had charge of the case. He was almost unconscious, or as one in a dazed condition. Friday he rose in bed, screamed, and with face distorted with pain fell down on the bed, and for several days thereafter he was unable to articulate a word. The heart was in a fairly good condition. He was an only son and the parents were frantic, feeling that death was inevitable unless some extraordinary thing was done to save life.

There were moist rales in the right lung; breathing was difficult; respiration 38; pulse 116; I found a rigid spine, especially in the upper dorsal region. I spent a half hour giving antebrae. I then supervised placing of a cold water compress and hot pack with two pint Mason jars full of hot water placed on each side, with blankets in buggy. We had the cold vinegar water compress extending at right angles to the head of the buggy. The nude baby was laid over the compress. The wet ends of the towel were quickly brought over the chest, followed by the dry ends of the folded blanket. Then the sides of the blankets in the buggy were brought over the baby, with two pint Mason jars full of hot water placed on each side, with one thickness of heavy blanket between them and the baby, to keep the Jars from burning the skin. The baby remained in the pack four hours.

Immediately after the pack was applied, he went to sleep and slept a half hour. During the remaining three and one-half hours he was quite restless, but was kept fastened in the pack. He sweated very profusely.

By next morning the temperature had dropped from 105.2 degrees F. to 99.4 degrees F. taken per rectum. The baby was very comfortable, and breathing easily. He did not appear at all sick. The respiration and pulse were almost normal. He took a good treatment without crying. He seemed brighter-eyed and jolly and ready to play. His full recovery occurred in a few days.

**Comment:** These two cases are reported to show the utter folly of the medical do-nothing policy in treating this next to the deadliest of all diseases. We also wish to again illustrate the value of the cold compress and hot pack combination. Here was an advanced case and an infant where the procedure was very successful.

**Story No. 44**

Wednesday, May 1, at 5:30 P.M., I visited a nine months' old baby who had a twelve hour case of pneumonia. Respiration 50; temperature 105.2 degrees F.; pulse 140; moist rales in one of the lungs; marked dyspnea. Baby looked decidedly sick; anxious expression from the eyes; great fretfulness with much suppressed crying.

I gave a twenty minute treatment, followed by cold pack over thorax and hot pack with Mason jars for remainder of body. We placed blankets in buggy. We had the cold vinegar water compress extending at right angles to the head of the buggy. The nude baby was laid over the compress. The wet ends of the towel were quickly brought over the chest, followed by the dry ends of the folded blanket. Then the sides of the blankets in the buggy were brought over the baby, with two pint Mason jars full of hot water placed on each side, with one thickness of heavy blanket between them and the baby, to keep the Jars from burning the skin. The baby remained in the pack four hours.

The baby gradually improved and at the end of a day was sleeping quietly. The same treatment was given the following day and on May 3 he was out of the pack and walking in the hall. He was brought back on May 18, when he was in a state of collapse. He was barely alive; he was a very helpless child. He had been lying in bed and had been operated on for appendicitis the day before. He came to me as one who was in a dazed condition. The skin of the body was cold; the temperature 103.6 degrees F.; the respiration 40; pulse 100; moist rales in one of the lungs; marked dyspnea. Baby looked decidedly sick; anxious expression from the eyes; great fretfulness with much suppressed crying.

I gave a twenty minute treatment and applied a cold pack over thorax. The baby went to sleep and slept a half hour. During the remaining three and one-half hours he was much better. The next day he was up in bed and walking about.

In the June Osteopathic Physician, Dr. C. W. Young in his "Little Stories of the Clinic," invites correspondence regarding his stories number 41 and number 42. We are accepting.

It is unfortunate that the data presented are insufficient for a differential diagnosis. Had he presented facts in regard to the equality of radial pulses, bruit, heart sounds, paradox of vocal cords, blood pressure, dulness on percussion and most important of all X-ray report of thorax, his diagnostic problem would be less difficult. However, it would seem from results obtained that his tumor was intra-thoracic goiter.

Late literature (Terry) says, "True intra-thoracic goiters are rare, but the term is used to include those in which a considerable part of the goiter lies within the thorax. About 7 to 10 percent of all goiters fall within the latter category. Accessory thyroids in the thorax may become goiterous and be entirely separate from the thyroid proper, but in the great ma-

**Pure—and Effective**

Study and practical experience have demonstrated that hydrogen peroxide manifests its maximum efficiency, only when it is free from those impurities which interfere with the prompt and unrestrained liberation of the pure oxygen, on which its action depends.

**Dioxogen**

therefore, is universally recognized as the best and most effective peroxide of hydrogen, not alone because of its greater volume of available oxygen, which far exceeds U. S. Phar. requirements, but particularly because of its exceptional freedom from residual substances which would restrain in any way the free release—and full effects—of this all-important constituent.

The value of oxygen as a purifying and antiseptic agent is too well established to require extended comment; its influence on disease germs, morbid processes, and its stimulation of granulation and tissue repair are so well understood, that further statement is unnecessary.

In a word, Dioxogen offers a means whereby a large amount of pure, uncontaminated oxygen may be brought directly to the places where it is required and in the active condition necessary to assure its highest potency.

**Oakland Chemical Co., 59 Fourth Avenue, New York**

"Where There Is No Vision the People Perish"
The condition must be differentiated from aneurysms and other mediastinal tumors.

In “Little Stories of the Clinic,” Nos 41 and 42, Dr. W. Young of Grand Junction, Colo., describes what is apparently known as “intrathoracic goiter.” This is discussed on page 261 of “Internal Secretions and Practice of Medicine” by Sajous—Tenth edition—Vol I. The chiropractor’s treatment, however, seems to be entirely original. L. E. Tichenor, D.O., Deer Lodge, Mont.

Great Progress at the Roscoe Osteopathic Clinic

The months of April and May have been P. G. months for the Roscoe Osteopathic Clinic.

Two years ago when Dr. Rench associated himself with the clinic idea—before the Roscoe Osteopathic Clinic was, in a sense, a binding requirement, namely, if in order to remain in the clinic group, one must take each year a P. G. course of at least one month.

During May Drs. Rench and Keckler were in New York studying along their respective lines—Dr. Keckler extending his X-ray studies to six weeks. A part of April was spent by Dr. Roscoe in studying diagnosis with Dr. Robert H. Nichols of Boston.

April 1st completed the Clinic’s first year’s work. Its success attests to the soundness and practicability of the clinic and professional group idea. From two physicians, this clinic has developed in a year to four physicians and a highly trained laboratory woman. Following is the professional personnel as it is today:

Dr. B. E. Roscoe, Dr. L. R. Rench, Dr. L. Spellman, and Miss Maria, the professional personnel as it is today:

X-Ray in Diagnosis

Use the X-ray more in diagnosis. Patients expect and silently demand it. Have lost several patients to other doctors because I deferred using the X-ray. My experience is that patients regard the doctor as a better light if X-ray is insisted on, though they can’t always pay the price. The public likes to feel that their doctor is up to the minute—H. M. Gries, D.O., Waterford, Wisconsin.

The WAYNE LEONARD

In the winter people seek health in Atlantic City. In the summer they seek pleasure. Recommend the Wayne Leonard to the friends of Osteopathy who wish to summer here. American plan rates, without treatments, quoted upon request. Single or double rooms. Electric elevator. Every convenience and the best table in Atlantic City.

We have purchased the right to use the “POST” system for troubled feet. It is specific Osteopathy.

Finger Treatment—a Plea Against Radicalism
Jerome Moore Watters, D.O., Newark, N. J.

Radicalism is radicalism, but little by little in becoming more conservative. So it is with all forms of radicalism. They either die a natural death, or gradually become conservative. It makes for publicity and the almighty dollar for a time, but there it ends. There have always been radicals in the world, and there always will be, but, as they have been predominated, they never will. At present, the osteopathic profession has a few radicals—very few, I am glad to say. These are of two classes: those who say radical things, and those who do radical things—the latter in regard to what they are accomplishing. In other words, making extravagant claims for results which they themselves must know cannot be accomplished.

We should be careful of what we say so as not to mislead the public and not to insult the intelligence of the osteopathic profession. We should learn to be honest with one another; try to boost our specialists; tell our patients about our failures; not claim to be the only one in our territory doing finger surgery or reconstructing tonsils or what-not. Boost our profession, not ourselves.

Dr. Still always taught conservatism. One never heard him speak of the success of any osteopathic technique that could be heard across the street, and I feel sure that he never spoke of any osteopathic tubes, or told a patient suffering with nerve degeneration that it could be cured in two years.

I have been amused at the many claims of rhizotomy that have been put forth in the past few years. In one or two incidences I have seen work done a year before any self-styled originator admired it for his own. If one will delve far enough back into Osteopathic History, one will finally find that some one doing the same thing years before, but not advertising it with a brass band. I frequently have patients come to me who have had radical treatment, and after examining them and hearing their stories, I always thank my lucky stars that I wasn’t the victim.

We should not be any more radical in our statements of what we can do, and what we are doing, than in our technique. As I write this, I recall some things that I have heard and read which the one responsible for them should have known to be false. Some of these statements are:

1. All otitis media cases cured by adjusting posterior occlupt. No comment necessary.
2. Case where ear drum was entirely gone. New drum grown in four treatments. Either a deliberate falsehood or doctor did not recognize ear drum that was present upon examination.
3. Case of deaf mute. Finger operation performed, patient came out of anesthetic and remarked that he could hear. Must not all deaf mutes be taught to speak?
4. 82% percent improvement in nerve deafness cases. I believe that 25 to 35 percent would have sounded more reasonable.
5. Eustachian tube digitally dilated to the bony opening. If one were to dilate a tube with his finger to that extent, the tube would split. Better to have said that the tube was split or obliterated. It would not be so misleading. Dilate means to expand—not to split or rupture.

There are many more such statements if I could only recall them now.

Whether we use the term “finger surgery,” “finger treatment,” or “finger technique,” does not matter, so long as we use them in the right way. One term will scarcely cover everything that we do with our finger.

Above all, let us be honest with ourselves, honest with our patients, and honest with our fellow practitioners. We will find that this will force us to be conservative in both speech and treatment, and that with conservatism as our slogan, we will accomplish better results with far more lasting effort.

Osteopathic Finger Technique

Much has been said as to whether the special technique used by the osteopathic specialists in the Eye, Ear, Nose and Throat work should be termed Finger Technique or Finger Surgery. I have been unable to determine where there is any surgery performed. It is purely Osteopathy and Osteopathy is not surgery. Dr. A. T. Still did not term the work of correcting the abnormal conditions in the body, surgery, but Osteopathic Technique or Adjustment. In this special technique we are adjusting abnormal conditions. I consider the term, "Finger Surgery" as mis-construing to the public. We do not want the laity to think or believe that if they come to our office for treatment for eye conditions, hay fever, catarrhal deafness, etc. that they have to undergo an operation each trip and this is what the term, "Finger Surgery" will lead them to believe. For anyone to advertise as the originator of Finger Surgery, it seems to me, is to attempt to take the discovery of A. T. Still and put it under another name. Let us carry out the desire of the Old Doctor to the end by using the term, "Osteopathic Finger Technique."—Dr. E. C. Branas, D.O., Southwestern Osteopathic Sanitarium, Blackwell, Oklahoma.

Who Did It First

There has been considerable discussion of late in our magazines as to who was the originator of “Finger Surgery.”

Having graduated from the A.S.O. in 1911, I can frankly say it was during my second year in college that we heard about dilating the Eustachian Tube with the finger, which was the beginning of the technique now known as "Finger Surgery."

Dr. J. Deason, now of Chicago, was doing this experimental work at the time above mentioned, which work he continued after he left.

Chico Hot Springs
Sanitarium and Hospital

Stillichildreth Osteopathic Sanitarium
Macon, Missouri
A. G. Hildreth, D.O., Sup't.

The pioneer Osteopathic Institution of its kind on earth created for the sole purpose of treating mental and nervous cases, an institution that has already proven the value of osteopathic treatment for insanity.

Write for Information

Located in the heart of the Rocky Mountains at an elevation of 5000 feet. Open the year around.

The Mineral Water baths and drinking is second to none for Rheumatism, Skin Diseases, Gastro-intestinal and kidney troubles.

Hospital is completely equipped with Laboratories x-ray and operating facilities.

Special attention to surgical cases.
G. A. Townsend, D. O., M.D.
Surgeon-in-Chief
Emigrant, Montana, Post Office

Dr. Nichols' Sanitarium, Buildings and Grounds, Savannah, Missouri

Museum of Osteopathic Medicine, Kirksville, MO
the staff of the A.S.O. to become head of the A. T. Still Research Institute, which at that time was located on Ashland Blvd., Chicago. If I am not mistaken this was in 1913, and during his first year at the Institute I visited him. While there he told me more of his work in finger surgery and I made arrangements with him at this time to come to our city and give us a talk on, and demonstration of his findings. Although there has been much work done since by others, I feel that Dr. Deason is the one who originated this technique and who is still doing much for its advancement. I might say here I am very glad he is not only advocate

For August Issue

We have a fine discussion on Diseases of Summer and How Osteopathy Cures them, written on request by Dr. A. G. Walmsley. Can you imagine anything more timely? When it's 104 in the shade does cold lemonade hit the spot? You bet! Just exactly does this forthcoming OH come home to the talk about Osteopathy in August. You'll gather an idea of how well Dr. Walmsley filled his assignment by this outline of topics he talks about:

- The Stomach and Bowels
- Cholera Morbus
- Typhoid Fever
- Summer Neuritis
- Summer Colds, Lumbago, Sciatica
- Hay Fever
- Whooping Cough; Croup
- "Rheumatism"
- Poison Ivy, Poison Oak, etc.
- Falls and Sprains
- The Athlete's Friend

You will surely want your community folks to read this interesting information about the value of osteopathic attention in summer time. Better write today and make your reservations. We are booking orders now.

Other Good Things, Too

The talk on summer's ailments takes about half the issue. It is followed by four dainty short articles by Irma G. Grise on "Osteopathy and the Expectant Mother"; "Infantile Paralysis"; "Don't Spank That Child"; and "Attention, Boys!" Then comes "Little Women" by Dr. Olive Walmsley, and a contribution by Dr. M. L. Hartwell on "Osteopathy Dependable."

Fine for the Family

This issue, you see, has something worth while to say about the health of the entire family—father, mother, son, daughter and baby. Ideal literature for spreading the gospel of Osteopathy in the homes of the land. Can you afford not to use this August issue of OH? You really can't! Can you afford to get along without the sort of literature which is offered you each month through "Osteopathic Health"? You really can not! It is well written, scientifically exact and sets forth the basic principles of Osteopathy in a comprehensive way. In a word, it is a dignified and readable essay from every possible angle.—Issue of February, 1922.

OSTEOPATHS
Waukegan, Illinois

"Where There Is No Vision the People Perish"
THE OSTEOPATHIC PHYSICIAN

A 15,000,000 “Reader Circulation” Advertising Campaign for Osteopathy!

Many osteopaths have the ideas that Osteopathy has always been well advertised. Others maintain that it has never been adequately advertised. Hence a considerable discussion recently about getting wider circulation for the information about Osteopathy.

It is true that Osteopathy has never been adequately advertised, but the prominence of advertising most widely used by the profession—the direct-to-the-home circulation of “Osteopathic Health”—has never been inadequately utilized although abundantly tested out and proven to be wholly successful by the hundreds who use it. Yet only a comparative few have used it liberally and consistently.

As to what might be accomplished by the method of advertising! Consider the tremendous influence that would be created for Osteopathy if the 5,000 members of the ADA each distributed 1,000 copies of “Osteopathic Health” monthly! That would be a total monthly distribution of 5,000,000. Assuming that on the average each copy reached five readers the total “reader circulation” per month would be 15,000,000. It is within the power of the profession to do this simply, inexpensively, and efficiently. The machinery for instituting and carrying forward such advertising is already available and working. The Bunting Publicity Service for Osteopaths is equipped to do the complete job.

There is no method of advertising as powerful or as economical when measured by results as “direct-to-the-home circulation.” The literature furnished by The Bunting Publicity Service for this campaign is of highest advertising quality and character.

The osteopathic profession can get abundant advertising—all it wants—if it will only avail itself of the material and machinery already built and running ready at hand to use.

A Common Complaint

I feel sure I should do something systematically in advertising. The chilist here are great advertisers and the five osteopaths do not do one bit of publishing. I can not even get them to help organize a Douglas County Osteopathic Society. I have to do everything alone and do it myself and do it better than the others as much as it does me.—Dr. Barrows.

Isn’t that a pretty state of affairs for Osteopathy?

What sort of “adjustment” is required to fix such mental blindness and sluggish ambition? Can any red-blooded osteopath suggest the technique for the case?

Perhaps a preliminary case history would help in solving the problem. We suggest the patient be asked to answer the following questions:

Why do you not advertise Osteopathy?

Why do you not do more for your patients?

Why do you not join osteopathic societies?

Why do you take the benefits of osteopathic publicity paid for by others and give nothing in return?

Why are you content to be an entirely negative factor in osteopathic progress?

Are you as satisfied with yourself as an osteopathic physician and with your material success in life?

If any osteopath, or group of osteopaths, in the state of Inertia supplied by our correspondent will answer these questions some interesting data might be collected that would aid in solving the problem of this “osteo pathetic Inertials” which unfortunately is all too common a complaint.

We Pay Cash for Acceptable Manuscripts

We are in the market for contributions that explain osteopathy, its theory and practice, in diagnosis and cures. In simple plain English suitable for conveying the lay reader and educating osteopathic patients. Such manuscripts must be suited for the purposes either of “Osteopathic Health” monthly, or for the “Harvest Leaflets” as will be typewritten on one side of the paper only and be either single or double spaced between lines. The total number of words by actual count must be given on each article and the number of words on each separate page.

For “Osteopathic Health”

Brochures or other manuscripts offered as suitable material for making up one entire number of this magazine must contain appropriately from 3,000 to 4,000 words. We supply the subheads for long articles.

For Harvest Leaflets

Manuscripts offered for “Harvest Leaflets” should conform to one or another of these sizes:

1. page “Harvest Leaflets” average from 50 to 125 words.
2. page “Harvest Leaflets” from 250 to 350 words.
4. page “Harvest Leaflets” from 600 to 700 words.
8. page “Harvest Leaflets” from 1,700 to 2,120 words.

So-called “fine writing” is not wanted. Good plain simple English and truth telling, based upon an underlying understanding of the psychology of “selling” osteopathy to the public is what we are after. What have you to offer Doctor? Have you ever tried your hand?

September Issue

Osteopathic Health

Carries the title “The Human Telephone System” is an intensely interesting semi-scientific explanation of osteopathic philosophy and practice by Dr. Mary L. LeClerc who wrote that very delightful monograph entitled “A Man is as Old as His Spine” which appeared as April issue “Osteopathic Health.” We are sure this contribution by Dr. LeClerc will prove just as popular as its predecessor. It explains in a very simple style scientific facts commonly quite obscure to the layman. Clear cut direct statements that make the thing as plain as can be and yet strung together in a way that makes an interest-holding story from start to finish. It’s bound to do a lot of good for advancement of popular osteopathic understanding of what osteopathy really is, too! Can’t tell you all about it in this space but here are some of the highlights:

The Nervous System Like a Telephone System.

What the Spinal Lesion Is and How It Adversely Affects Spinal Nerves.

Results Produced by Spinal Lesions.

How Nerves are Injured.

The Osteopathic Adjustment; What It Is.

Time a Factor in Correction of Spinal Lesions.

Forms of Manipulation.

Lesions That Cannot Be Cured.

Spinal Lesions in Animals.

Osteopathy Potent in Acute Diseases.

Osteopathic Standards of Education; How They Came About.

Now is the safe time to place your order for this splendid patient winner and educator. It is not too late! Osteopathic Health, you know, is primarily prepared for contract users. Editions are estimated in advance in accordance with the contract-patron demand. A limited surplus is provided for “single orders” and late arriving new contracts. So be sure of getting the supply you desire order early or put yourself on contract basis.

The latter is best and cheapest.

Osteopathic Health is the journalist service supreme for Osteopaths and you really cannot afford to forego receiving its benefits regularly. It costs you money to do without it. Get yourself in line with the big bunch of wide-awake osteopaths who have proven for themselves the value of this service and who stick to it year in and year out. Sign up your contract for your work your practice field requires. If in doubt ask us and we will help you estimate intelligently quantities you should circulate monthly.

It Recalled a Scattered Practice in Short Order

Just a few words to say in regard to the use of "Osteopathic Health" since my return to practice. As you know, I have been back only a few months but I started to use the "O.H." immediately. The results are astounding. Not only has "O.H." brought back my former patients but stirred up new ones. Before I never taught much of "O.H." while enjoying its results but how I have changed my mind. Last week was just fine. I only had this issue 20 minutes before I had read it through.—H. J. Nourse, Greenerville, Ohio.

Specializing in Diseases of Gastro-Intestinal Tract Consultation and Referred Cases given special attention HOSPITAL FACILITIES 1813 Pine St. PHILADELPHIA, - - PA.

Dr. Muncie Offers to Instruct Physicians or Clinics in His System

Dr. Curtis H. Muncie, who successfully taught and brought back to normal hearing the Brooklyn lawyer who had been deaf practically twelve years, is now ready to teach any combination of physicians, surgeons or hearing specialists or any clinic, his method of restoring hearing to deafness. He maintains that there are thousands and thousands of deaf persons for whom there is hope and yet whose cases are now hopeless for want of physicians who can give the proper treatment. Dr. Muncie proposes to give lectures on his methods to as many physicians as will attend, in his home or in any clinic with this one stipulation, viz., that he be offered absolutely no compensation.

Find That Student Now!

Doctors are becoming scarce. One-half as many M.D.'s are being graduated as a decade ago. Why not fill the ranks with O.D.'s? Otherwise the medical program of "community doctors" and "community hospitals" will go over and the D.O. will be left out. Find some students NOW for our colleges—H. C. Wallace, D.O., Southwestern Osteopathic Sanitarium, Blackwell, Oklahoma.

Chiro Bill Defeated in Louisiana

The Louisiana Legislature House Bill No. 276, popularly known as the chiro bill has been "killed." There will be no further action in the matter this session. This means that the chiros are out of business in Louisiana for at least two years more.—Henry Tote, D.O., New Orleans, La.

St. Louis Osteopathic Association Meeting

At the St. Louis Osteopathic Association's May meeting, St. Louis, Prof. W. P. Sxca read a paper on "The Fundamentals of Psycho-analysis" and Dr. J. J. Jeffery on "The Vegetative Nervous System." As this was the last meeting of the year it was decided to call a meeting in June for the purpose of electing officers for the coming year.

Millard Charts at $1.00 per Copy "As Is"

The Millard Chart is a three-color duo-anatomical chart showing spinal and sympathetic nerves. Size 22 inches by 27 inches. 57 references. Millard offers high standing in the profession, and they have tested to its merits. Originally it sold at $5.00 per copy. Now, for the purpose of closing out on it, we are offering it at $1.00 per copy "as is."

You've got to hurry if you want one. Supply almost exhausted.

THE OSTEOPATHIC PHYSICIAN

Louisiana Wants Osteopaths

Louisiana needs about twenty good live ten finished Osteopaths. Need new qualified Specialists nor camouflaged Medics, but men and women who want to practice Osteopathy. I would like to place an Osteopath in Plaquemine, Houma, Donaldsonville, New Iberia, Ruston, and Figiana. These towns have no Osteopaths. Lake Charles, Monroe, Baton Rouge, Jennings, could stand two or three more such. New Orleans ought to have ten more Osteopaths. Living conditions, churches, schools, hospitals, and business, are all good in the above mentioned towns. For further information write to Dr. Henry Tete, Secretary State Board of Osteopaths, 1117 Maison Blanche Bldg., New Orleans, La.

Osteopathic Health for August

DISEASES OF SUMMER

THE EXPECTANT MOTHER

Ivy C. Geer

LITTLE WOMEN

Elva W. McNair

Here is something to intrigue interest during hot days of August. It gives information about osteopathic examination, there "were present, primarily the Chicago College of Osteopathy, with the examinations given by osteopaths, ophthalmologists, and pediatricians. The object of these examinations is to determine if the patients are being as well as possible. Every patient was given all of the examination procedures described, which relieved the patients from unnecessary pain.

The twelfth annual convention of the Illinois Osteopath Association was held in Chicago, June 17th. Dr. Millard in his address, speaking of the future of osteopathy, said that osteopathy is to be congratulated on its undertaking of various specialties. The Philadelphia College of Osteopathy is to be congratulated on its undertaking of this work, and many members expressed their agreement with this view.

Dr. Anna K. Aplin, formerly of 28 Alfred Street, Detroit, Mich., is now located at 8047 Woodward Avenue, Detroit, Mich., for the summer. Dr. Alfred W. Rogers, of Boston, Mass., is in Europe for the summer.

Dr. Pearl Barker Shulz is now located at 5733 East 23rd Street, Cleveland, Ohio.

Dr. Samuel L. Scotttorn announces change of address from 8 Osteopathic Building, East Mississippi Street, Dallas, Texas.

Dr. W. Pay, Milbank, S. Dak.

Dr. F. B. Teter, Davenport, Iowa.

Dr. Myron P. Runions of Correctionville, Iowa, and Miss Olive Mumford of Cedar Rapids, Ia., left for his annual summer's vacation in California, and Miss Beatrice Grant Ranson, July 2nd.

Dr. Charles S. Green of 51 East 42nd Street, New York City, left on July 28th for a trip to Europe for the summer.

Dr. E. J. Cahan of Perryville, Mo., left on July 24th for a three months' trip in eastern United States and New York, visiting his father and other relatives.

Dr. Charles S. Green of 21 East 42nd Street, New York.
